

Why use Calcifert

Calcium and sulphur are essential nutrients for improving soil structure, nutrient uptake and plant growth. Studies over the last 35 years have shown, up to 85% of arable and 88% of grassland soils tested are deficient, with some soils critically low.

Practical benefits include:

- Uniform 2–5 mm granules for even spreading
- Fast-acting and highly reactive pH correction
- Nutrients in immediately available plant forms
- Suitable for standard fertiliser spreaders with 36 metre reach
- Easy storage and handling
- Low application rates
- Suitable for precision farming
- Proven performance across multiple crop types and grassland systems

//

We are predominately a forage push farm, and get as much as we can out of the grass using a five cut multi-cut system. We've been using Calcifert for the past 5-7 years and found that the Calcifert has massively improved the soil's ability to grow grass.

Tom Fowles, Dairy Farmer

A global partner in minerals, materials and solutions.

LKAB Minerals is a leading supplier of high-quality industrial minerals, offering a diverse range of products and services to industries such as construction, steel manufacturing, and agriculture. LKAB Minerals focuses on delivering innovative solutions that meet the highest environmental and performance standards. As a part of the LKAB Group, the company leverages cutting-edge technology and expertise to provide reliable, value-added products that support the global transition to a better future.

Calcifert |  **LKAB**

A calcium for every soil

Advanced granulated soil conditioning products designed to improve soil health, nutrient efficiency and crop performance.

Designed for modern farming

Calcifert products can be applied precisely where needed, helping growers target individual fields or specific problem areas, improving nutrient use efficiency, soil health and optimising yields.

Choosing the right calcium and sulphur for your soil

Calcifert Lime

When a change in pH is required to neutralise soil acidity quickly and maintain it for longer. Suitable for all crops and grassland systems.

Calcifert Lime utilises ultra fine particles of calcium carbonate for rapid reactivity to increase pH and improve soil structure.

Key benefits:

- Corrects low soil pH
- Improves nutrient availability
- Suitable for growing crops or bare ground
- Lower application rates than conventional lime
- Improves soil structure and biology
- Approved for organic farming

Calcifert Sulphur

For soils needing both calcium and sulphur for improved soil structure, optimal nitrogen use efficiency, enhanced crop health and yields, but no increase in pH is required.

Corrects high magnesium index soils by balancing cations and removing excess magnesium.

One of the purest calcium sulphate products on the market for sulphur-responsive crops and grassland systems in an immediately available plant form.

Key benefits:

- Supplies calcium and sulphur together
- Optimises Nitrogen Use Efficiency
- Strengthens plant structure
- Improves yield and crop quality
- Increases grass protein levels
- Reduces high magnesium index fields, improving soil structure and workability
- Suitable for precision application

Calcifert LS11

When calcium, sulphur, and a balanced pH are needed in one cost-effective application for quality silage, strong forage, and sulphur responsive crops.

Calcifert LS11 combines high-reactivity calcium carbonate with calcium sulphate and is ideal for all grassland and cropping applications.

Key benefits:

- Maintains optimal soil pH
- Supplies calcium and sulphur together
- Optimises Nitrogen Use Efficiency
- Supports stronger crop performance
- Suitable for all crop types and grassland systems
- Ideal for grass reseeds and between cuts maintaining pH and sulphur availability

Supporting soil performance from the ground up

For over 20 years, we have combined industry expertise, technical knowledge and a commitment to quality in the manufacture of Calcifert, delivering trusted, high-performance solutions for soil, grassland and cropping conditions requiring pH adjustment, calcium or sulphur applications.

Manufactured as durable, uniform granules, Calcifert products are designed for accurate spreading with standard on-farm equipment, providing efficient and cost effective results across all crops and grassland systems.

The Calcifert range delivers essential calcium and sulphur to soils to improve soil health nutrient efficiency and crop performance.
