The conveyor system is designed for the ease of husbandry tasks for sheep and goats and saves the operator from the wear and tear of race work. Sheep can be easily turned on their backs to complete jobs such as bellying and tailing.

“After a full day’s work with sheep, you will still feel fresh as a daisy.”

“Made by the farmer, for the farmer.”

Steve Jones

Conveyors

Features

Low Maintenance

Robust welded steel construction with standard hydraulic fittings

High Output

Capable of handling 700-800 sheep per hour, depending on operation and staff

Foot Pedal Operation

Foot pedal controlled leaving hands free to work

Mobile & Static

Mobile conveyor has detachable wheels & hitch, raised and lowered with hydraulics to enable flexible setup

3m Working Length

Conveyor length enables several sheep to be processed simultaneously

Vari Width Deep V Belt

Dual belt design can comfortably handle and restrain sheep of any size

All Hydraulic

Standard hydraulic fittings for driving the conveyor

Adjustable Speed

Adjust the speed of the conveyor to suit the job including stop/start control

- ✓ Belly clipping
- ✓ Foot care
- ✓ Floor bath dipping
- ✓ Stock marking
- ✓ Drenching
- ✓ Vaccinating
- ✓ Dipping/pour on
- ✓ Bolusing
- ✓ Tagging
- ✓ Mouthing
- ✓ Blood testing
- ✓ Pitching
- ✓ Orfing
- ✓ Dagging/tailing
- ✓ Jacks up by hydraulics to fill mobile dipper

Having been born & raised on a hill farm in mid-Wales, I know from experience how hard sheep race work can be. I started fabricating from a young age with the aim to improve work-flow and efficiency around the farm.

Over the years I've observed a positive correlation between farm work-flow and profitability. My father had a knee replacement, and I realised how inefficient our sheep race was. Years of awkwardly wrestling ewes, lambs and tups through a traditional race system had taken its toll.

After a lot of thought, I set about fabricating a system to eliminate this problem and increase the flow and speed of husbandry tasks. We have been using the sheep conveyor since 2016 and are currently putting around 15,000 sheep through it each year. Through this usage, the conveyor has been thoroughly tested, tweaked and trialled to ensure maximum efficiency and minimum stress.
