Aquamatic 5300 Grain Moisture Meter

With the Aquamatic 5300, quality comes first. The system is made of sheet metal and polymeric components, which extend instrument life and reduce the likelihood of potential damage during relocation and shipping. Plus, the single-piece cast cell ensures accurate measurements of volume/density through precise control of cell dimensions. And the RF electronics are built directly into the cell centre divide, eliminating cabling and removing impedance-matching issues over time due to connector degradation.

**ANALYSE MOISTURE,
TEST WEIGHT, AND
TEMPERATURE**

AM5300 Benefits

- **Superior Accuracy**
- **Better results on fresh field samples** - higher frequency measurement goes deeper into the grain, providing accurate results and faster return on investment.
- **Easy to use** - touchscreen uses capacitive technology and even responds to gloved hands.
- **Rapid analysis** - Results are displayed in less than 10 seconds.
- **VNC connection is enabled with admin access for remote support.** Setting it apart from the Aquamatic 5200.
- **New products can be added** - Including peanuts, coffee, canary seed, different vegetable seeds, and feed pellets.
- **Ability to change bias and slope in the field by admin users on unlocked products.**
