CowRecovery™ System

A proven, award winning system for moving down cows safely and effectively for both cow and farmer

- ✦ A farmer developed system designed to move a down cow quickly, whilst minimising risk of injury to the cow and farm staff
- ✦ A moving technique perfected by farmers and vets in an extensive field trial, allowing two farm staff to move a down cow in a welfare friendly manner
- ✦ A comprehensive veterinary developed staff training programme to ensure consistent results

Moving animals in a welfare-friendly way is often a challenge due to a lack of manpower, limited availability of appropriate equipment, and poor training of farm staff

CowRecovery™ has been founded with the aim of making life better for both cows and the people that care for them. After over 30 years of dairy farming, Managing Director James Yeatman has seen first-hand the frustration and helplessness that comes with managing a downer cow. Many of these issues stem from a lack of

suitable equipment, or not enough hands-on deck. The **CowRecovery™ System** looks to alleviate both of these issues.

CowRecovery™ System was trialled and developed over a 10 month period with 15 leading dairy farms - in collaboration with Synergy Farm Health Vets and Albutt Attachments.

The Sustainable Solution for Improving Down Cow Outcomes
