Base Station

N20
Fixed High Power GNSS Station

N10
CORS System

User Story

Jesper Svenningsen -- From Salling in Denmark

"The advantage of the auto-steering from Sveaverken is that it is easy to move between different tractor brands. So we are not tied to one brand and one GPS system and we feel good knowing that there are people behind it whose main purpose is to sell and service GPS—that it is not just a side business for a larger company," says Jesper.

Jesper runs a mixed farm with nearly 300 cows and 330 hectares of crops. Since he uses equipment from various brands, the Sveaverken system gives him the flexibility to switch between tractors as needed.

Florian Berrer -- From Upper Austria

Florian Berrer, who runs a contracting business with extensive cropping operations, initially didn't believe the Sveaverken F200 was needed. "I said we didn't need it," he recalls. "But in practice, it turned out completely differently."

Installation took under an hour, and the results were instant. The F200 guided his tractors precisely, even on slopes and uneven terrain. "It saves me seed as well as time. You can see exactly where you need to go, lift it out, and move onto the next track," Florian explains. He was especially impressed by its accuracy on hills, which matched its performance on flat ground.

You take pride in your work, and we take pride in building the tools that help you work smarter.
