NOZZLES FOR FIELD CROPS
IN THE LONG TERM, LESS IS ALWAYS MORE

Lechler is a world leader in nozzle technology. For over 140 years, we have pioneered numerous groundbreaking developments in the field of nozzle technology. Thanks to our decades of experience with drift-reducing technology, we have been able to make a significant contribution to more gentle and precise application of plant protection products.

We developed the ID 120-05 as early as the 1990s – the first JKI-approved nozzle with 90 % drift reduction – and therefore laid down a marker for the future direction. Just a few years later, the PRE (VA for Syngenta) already made it possible to achieve a 95 % drift reduction for field spraying. Further user-friendly solutions followed at short intervals, such as the patented IDTA injector that can be removed without tools.

We have consistently followed this path with ongoing new developments. For example, the double flat spray nozzle XDT 130 with extremely low drift over the entire pressure range, or the liquid fertilizer border nozzle, which allows completely uniform cross distribution up to the field edge.

In Europe, Lechler has been the number one for nozzle technology for a long time now. However, we do not just see ourselves as a nozzle manufacturer, but above all as a partner in efforts to achieve both environmentally-friendly and efficient agriculture. This is also particularly true for the large growth markets in China and India, where we are already represented by subsidiary companies and a dense sales network.

SUCCESS THROUGH THE TWO-NOZZLE STRATEGY

The two-nozzle strategy involves the use of different nozzle types for crop protection applications. The most common options are flat spray nozzles and twin flat spray nozzles. Depending on the crop and the specific application, one or the other is selected.

Flat spray nozzles (e.g. ID, IDK/IDKN, XD)
Ideal when uniform canopy penetration is crucial. They deliver a stable droplet spectrum and perform reliably even under windy conditions or varying humidity. These nozzles are well suited for insecticides and growth regulators, depending on the crop's growth stage and the target surface.

Twin flat spray nozzles (e.g. IDTA, IDKT, XDT)
With two spray angles, they ensure excellent coverage even on vertical targets and help reduce spray shadows. They are particularly suitable for pre- and post-emergence herbicides, fungicide applications (e.g. ear or blossom treatments in cereals or oilseed rape), and insecticides, depending on the crop's development stage.

Important

The Two-Nozzle Strategy does not mean using both nozzle types at the same time. Instead, the operator selects the appropriate nozzle type based on the situation in order to achieve the best possible combination of efficacy, drift reduction, and crop safety for each application.

Application Examples

- Pre-emergence herbicides in cereals: Twin flat spray nozzle (e.g. XDT)
  → maximum soil coverage with minimal drift.
- Post-emergence applications in sugar beets:
  Twin flat spray nozzle (e.g. IDKT)
  → Reliable coverage of small grasses and vertical surfaces.
- Fungicide in cereals (e.g. ID):
  → Uniform canopy penetration, stable even under challenging conditions (e.g. wind).
- High driving speeds: Twin flat spray nozzle (e.g. IDTA)
  → Uniform coverage of vertical targets (e.g. ears) without spray shadows.
- Fungicides after row closure in potatoes:
  Extremely coarse flat spray nozzle (e.g. XD)
  → Uniform canopy penetration in dense potato crops, stable under difficult conditions (e.g. wind).

The Best of Both Worlds: Choosing between flat spray and twin flat spray nozzles depending on the application combines the advantages of both types.

- Optimal canopy penetration
- Uniform coverage without spray shadows
- High drift reduction
- Flexible use under varying driving speeds and environmental conditions

With this approach, you are perfectly equipped for an efficient, environmentally responsible, and future-oriented crop protection strategy.

Optimal coverage through the twin flat spray nozzle

Flat spray nozzles

IDK/IDKN – The Compact One

- Pressure range: 1**/**1.5–3**–6
- Robust design, well protected on open booms
- Ideal for constant driving speeds and application rates
- Favourable droplet spectrum even at low pressures

ID – The Versatile One

- Pressure range: 2/3*–**4–8** bar
- Flexible for varying application rates and driving speeds
- Minimal change in droplet spectrum across pressure range
- High drift stability under all conditions – even in wind or low humidity

XD – The Innovative One

- Non-Venturi nozzle with integrated pre-atomizer
- Pressure range: **1.5–8** bar
- Extremely coarse droplet spectrum with very low fine-droplet fraction
- High work rate, weather-independent application
- Tool-free exchange thanks to “nozzle-in-cap” design
- Excellent compliance with drift reduction requirements
- Suitable for PWM systems

NEW

In Comparison	IDK/IDKN	ID	XD
			
Nickname	The Compact One	The Versatile One	The Innovative One
Pressure range	1**/**1.5–3**–6 bar	2/3*–**4–8** bar	**1.5–8** bar
Key features	Robust and simple, constant driving speeds and application rates, ideal for older sprayers due to low pressure range	Flexible for different application rates and driving speeds, high work rate	Minimal fine-droplet fraction, highly drift-resistant, high work rate
Typical applications	Herbicides, fungicides, insecticides, growth regulators	Herbicides, fungicides, insecticides, growth regulators	Fungicides and insecticides in potatoes, fungicides

Twin flat spray nozzles

IDKT – The Precise One

- Symmetrical twin flat spray 30°/30°
- Pressure range: 1***/**1.5–3**–6 bar
- Excellent coverage of small grasses and vertical targets
- Low drift

IDTA – The Fast One

- Asymmetrical twin flat spray:120° front / 90° rear
- Pressure range: 1–**4–8** bar
- Ideal for driving speeds above 12 km/h
- Extremely low drift

XDT – The Drift Stopper

- Compact Non-Venturi design with pre-atomizer
- Pressure range: 1.5–**3–8** bar
- Extremely coarse droplet spectrum with minimal fine-droplet fraction
- Excellent for all herbicide applications and drift reduction requirements
- Suitable for PWM systems

	IDKT	IDTA	XDT
			
	The Precise One	The Fast One	The Drift Stopper
	1***/**1.5–3**–6 bar	1–**4–8** bar	1.5–**3–8** bar
	Symmetrical spray pattern, precise coverage on vertical targets, best for constant driving speeds < 12 km/h	Uniform coverage on vertical targets, ideal for high driving speeds > 12 km/h	Minimal fine-droplet fraction, highly drift-resistant, high work rate
	Herbicides, fungicides, insecticides	Herbicides, fungicides, insecticides	Pre-emergence herbicides, fungicides in potatoes

Nozzle sizes:

NOZZLES FOR FIELD CROPS PRODUCTION

TECHNICAL REQUIREMENTS

Optimum application of plant protection products is guaranteed only if narrow flow rate tolerances and uniform distribution are ensured. These parameters are laid down in the JKI and ENTAM guidelines and in the corresponding EN/ISO standards on European and international level.

In the case of JKI-approved Lechler nozzles, the volume flow of new nozzles may deviate from the table value by a maximum of +/–5 %.

In combination, new JKI-approved Lechler nozzles must guarantee the most uniform cross distribution possible. The coefficient of variation over the entire width of the spray boom must not exceed 7 % in the specified pressure range and with the corresponding spray heights.

BIOLOGICAL REQUIREMENTS

In order to achieve the optimum effect, application of plant protection products must be extremely precise. Lechler precision nozzles achieve exact dosage and uniform distribution. Independently of this, the recommendations of the plant protection product manufacturers with respect to l/ha quantities must always be observed. Determination of the application area before use is of decisive importance for optimum deposition of the plant protection product.

Delivery takes place via flat spray and twin flat spray nozzles. Flat spray nozzles generally achieve good crop penetration (e.g. mildew control in cereal crops). In contrast, twin flat spray nozzles are recommended for optimum deposition on vertical target surfaces (e.g. grass control, ear treatment) and to reduce spray shadow (e.g. direct seed, cloddy soil).

ENVIRONMENTALLY-RELEVANT REQUIREMENTS

The wind and thermal currents can cause some of the droplets containing the active ingredients to miss the target area. This drift can pollute or damage adjacent crops, contaminate nearby waters and pose a risk to both humans and animals. In addition, drift frequently leads to incorrect dosages for the crop being treated.

The causes of drift depend on equipment-specific and meteorological factors such as:

- Droplet size
- Sprayer velocity
- Spray height
- Wind speed
- Air temperature
- Air humidity

LOSS-REDUCING EQUIPMENT

Application regulations for plant protection products, e.g. distance restrictions to water and field boundary structures, have been defined in order to protect non-target organisms. Depending on the toxicity of the plant protection product, the distances from water and field boundaries can be reduced with loss-reducing equipment, e.g. with air-injector nozzles.

Lechler nozzles are officially approved in many European countries as drift-reducing devices in the drift reduction classes 99/95/90/75/66/50 and 25 %. The criteria on which the distance regulations are based in the individual countries comprise, among other things, the nozzle technology, water type, bank vegetation, width of the field boundary, mixture concentration, process technology (e.g. pressure) as well as external influences such as wind direction, wind speed and temperature.

Drift-reducing Lechler nozzles allow areas to be used more efficiently while at the same time protecting field boundaries and water.

NOZZLE RECOMMENDATIONS FOR PLANT PROTECTION/HERBICIDE APPLICATIONS

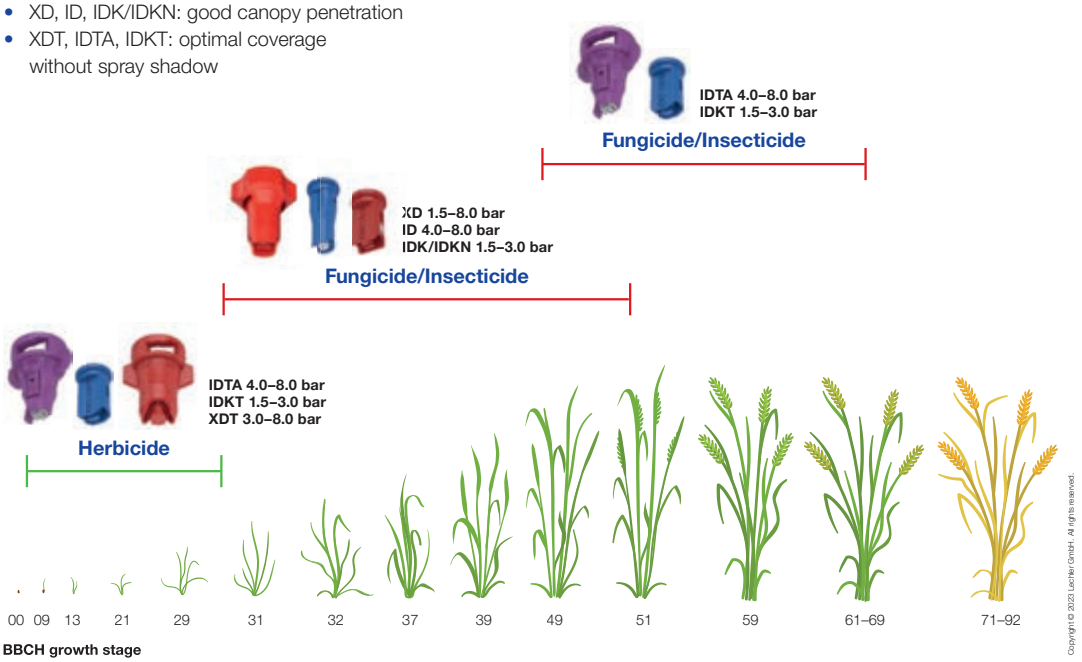

Cereals

Pesticide application

2-nozzle-strategy

- XD, ID, IDK/IDKN: good canopy penetration
- XDT, IDTA, IDKT: optimal coverage without spray shadow

Good to know

You can find further information in our main catalogue “Agricultural Spray Nozzles and Accessories” and online at **www.lechler-agri.de**.

Air-injector flat spray nozzles
ID-120/ID-90

Crop production | Ground care

Dimensions in mm.

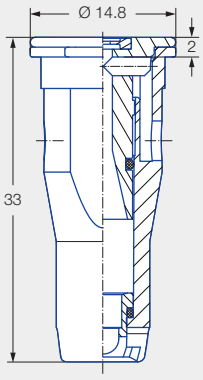

- Air-aspirating flat spray nozzle
- Extremely low-drift

Advantages

- 90 % drift reduction for: ID-120-025 to -06
- Drift stability over a large pressure range thanks to long injector design
- Timely application even under adverse weather conditions
- Increased workrate due to flexible use over a wide pressure range – adaptation by changing the sprayer speed and l/ha rate without nozzle changes
- Very good deposition structure and crop penetration
- Suitable for PWM

ID ID-C

JKI approval as loss-reducing: 90/75/50 %

G 1965, G 1966, G 1968, G 1969, G 1970, G 1971, G 1972, G 1973, G 1974, G 2088, G 2287

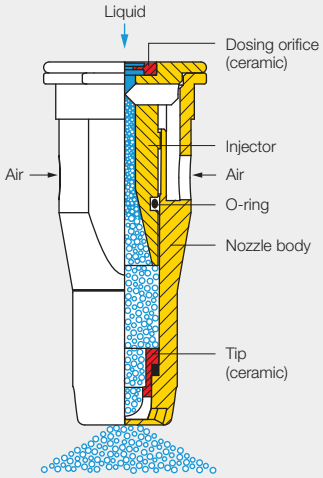

JKI approval for mixed equipment and border nozzle IS.

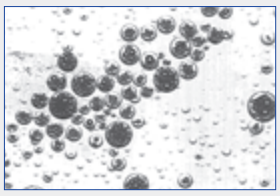

Current list at: www.lechler.com/de-en/service/loss-reducing

Series ID

Injector can be removed without tools

Bubble formation

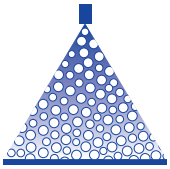

Application:

- **Plant protection products and growth regulators**
- **Liquid fertilizer delivery** (AHL UAN)
- **Edge application** Can be combined with border nozzle IS 80
- **Golf course**

Technical data:

- **Nozzle sizes** 01–10
- **Spray angles** 90°, 120°
- **Materials** POM, ceramic
- **Pressure ranges**
  - ID-01 to -015: 3–**4**–**8** bar
  - ID-02 to -10: 2–**4**–**8** bar
  - UAN: 2–4 bar
- **Recommended strainers**
  - 80 M 01
  - 50/60 M 015-04
  - 25/30 M 05–10
- **Droplet sizes** Ultra coarse – medium
- **Width across flats** 10 mm

Compact air-injector flat spray nozzles
IDK 120/IDK 90 / IDKN 120

Crop production | Ground care

Dimensions in mm.

- Air-aspirating flat spray nozzle
- Very low drift

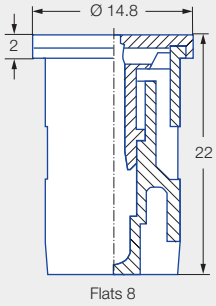

Advantages

- 95 % drift reduction for: IDK 90-015 C and -02 C with 25 cm nozzle spacing
- 90 % drift reduction for:
  – IDK 120-05 to -06
  – IDKN 120-03 to -04
- Compact design
- Large droplet size range from ultra coarse to medium
- Very low drift and loss-reducing in the pressure range up to 3.0 bar (depending on size)
- Inexpensive alternative to conventional standard nozzles
- Very good deposition structure and crop penetration
- Suitable for PWM

IDK | **IDK-C** | **IDKN**

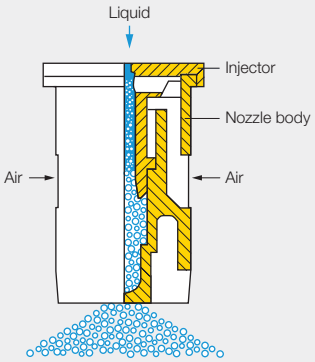

IDKN characteristic: Nozzle body with white stripe

Series IDK/IDKN

Injector can be removed without tools

JKI approval as loss-reducing: 90/75/50 %

JKI approval for mixed equipment and border nozzle IDKS.

Current list at: www.lechler.com/de-en/service/loss-reducing

Application:

- **Plant protection products and growth regulators**
- **Liquid fertilizer delivery**
- **Spray frame**
- **Edge application Can be combined with border nozzle IDKS 80**
- **Golf course**
- **Backpack sprayer**
- **Greenhouse**

Technical data:

- **Nozzle sizes** 01–10
- **Spray angles** 90°, 120°
- **Materials** POM, ceramic
- **Pressure ranges**
  - IDK 01 to -10: 1–**1.5–3**–6 bar
  - IDKN 03 to -04: 1–**1.5–3**–6 bar
  - UAN: 1.0–2.5 bar
- **Recommended strainers**
  - 80 M 01
  - 50/60 M 015–04
  - 25/30 M 05–10
- **Droplet sizes** Ultra coarse – medium
- **Width across flats** 8 mm

NEW

Flat spray nozzle
XD 120

Crop production | Ground care

Dimensions in mm.

- Extremely low drift flat spray nozzle with pre-atomizer

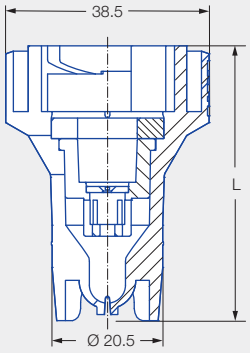

Advantages

- Non-Venturi nozzle
- Extremely coarse droplet spectrum
- High workrate due to wide control range
- Nozzle in cap with bayonet system MULTIJET (incl. gasket)
- For timely application even under adverse weather conditions
- Very good deposition and crop penetration
- PWM suitable

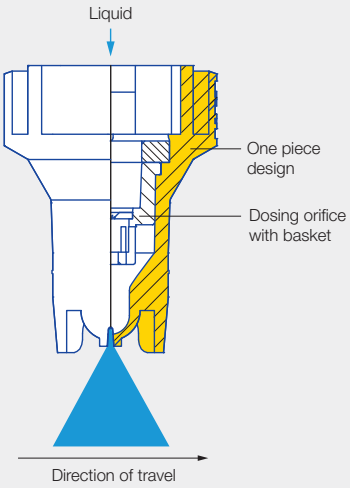

Series XD 120

L = depending on the nozzle size:
45.9 mm, 46.9 mm 47.9 mm

Application:

Plant protection products

Liquid fertilizer delivery

Golf course

Technical data:

Nozzle sizes
02–15

Spray angles
120°

Materials
POM

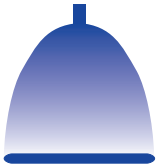

Pressure ranges
1,5–8 bar

Recommended strainers
- 50/60 M 02–04
- 25/30 M 05–15

Droplet sizes
Extremely coarse–very coarse

NEW

Pre-emergence flat spray nozzle
PRE

Crop production | Ground care

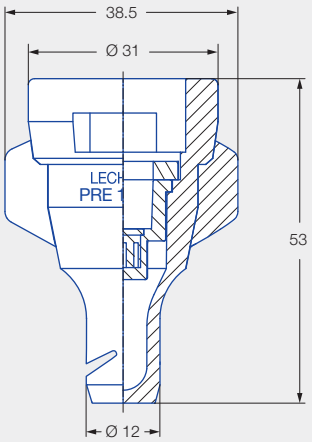

Dimensions in mm.

- Extremely low-drift flat spray nozzle
- For timely application of pre-emergence herbicides

Advantages

- 95 % drift reduction from 1.5 to 5 bar
- Flexible implementation of distance to water requirements
- Wide pressure range from 1.5–8 bar
- High workrate through simple adaptation of l/ha rate and sprayer speed
- Timely application even under adverse weather conditions
- Nozzle in cap with MULTIJET bayonet system (incl. gasket)
- Suitable for PWM

Series PRE

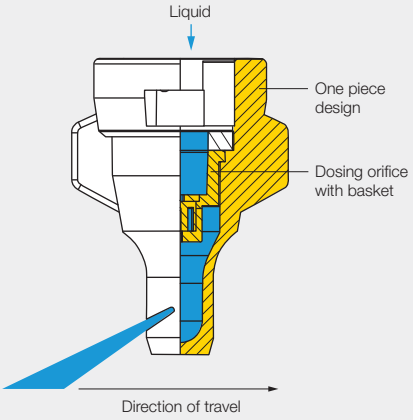

JKI approval as loss-reducing: 95/90 %

G 1981

Current list at: www.lechler.com/de-en/service/loss-reducing

Pre-chamber can be removed without tools

Application:

Herbicide pre-emergence

Liquid fertilizer delivery

Golf course

Technical data:

Nozzle size
05

Spray angle
130°

Material
POM

Pressure ranges
- **1.5–8** bar
- UAN: **1.5–4** bar

Recommended strainer
25/30 M

Droplet size
Ultra coarse

Anti-drift flat spray nozzles
AD 120/AD 90

Crop production | Ground care

Dimensions in mm.

- Low-drift flat spray nozzle

Advantages

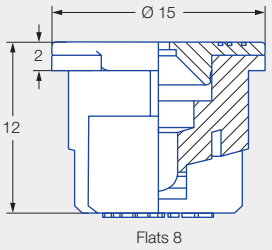

- Application with medium to coarse droplets even with low l/ha rates
- Optimized atomization and reduced fine droplet share thanks to integrated pre-chamber
- Pre-atomizer can be removed without tools
- Pre-atomizer has flush contact with twist lock
- Pre-atomizer can be removed for cleaning
- Compact design
- Suitable for PWM

AD

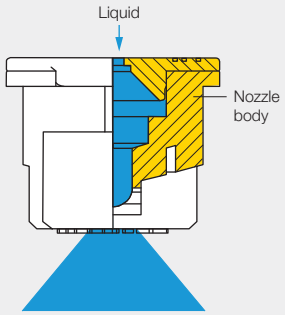

AD-C

Series AD

Removable pre-atomizer

Application:

Plant protection products and growth regulators

Backpack sprayer

Greenhouse

Technical data:

Nozzle sizes
015–04

Spray angles
90°, 120°

Materials
POM, ceramic

Pressure ranges
1.5–3–6 bar

Recommended strainers
- 80 M 015
- 50/60 M 02–04

Droplet sizes
Coarse – fine

Width across flats
8 mm

Multirange flat spray nozzles
LU 120/LU 90

Crop production | **Ground care**

Dimensions in mm.

- Universal flat spray nozzle with fine droplet spectrum

Advantages
- Extended pressure range
- Low drift in the pressure range up to 2.5 bar
- Fine-droplet application
- High manufacturing quality
- Suitable for PWM

LU

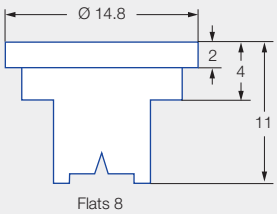

LU-C

LU-S

Series LU

Application:

Plant protection products and growth regulators

Edge application
Can be combined with border nozzle OC

Backpack sprayer

Greenhouse

Technical data:

Nozzle sizes
01–08

Spray angles
90°, 120°

Materials
POM, ceramic, stainless steel

Pressure ranges
1.5–2.5–5 bar

Recommended strainers
- 80 M 01–015
- 50/60 M 02–04
- 25/30 M 05–08

Droplet sizes
Coarse – very fine

Width across flats
8 mm

Twin flat spray nozzles
XDT 130

Crop production | Ground care

- Extreme drift reduction over the entire pressure range
- Symmetrical twin flat spray jet 40°/40° to the front/rear

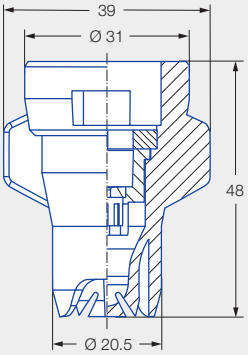

Advantages

- High workrate due to wide control range
- Optimum deposition with reduced spray shadow
- Nozzle in cap with MULTIJET bayonet system (incl. gasket)
- For timely application even under adverse weather conditions
- Suitable for PWM

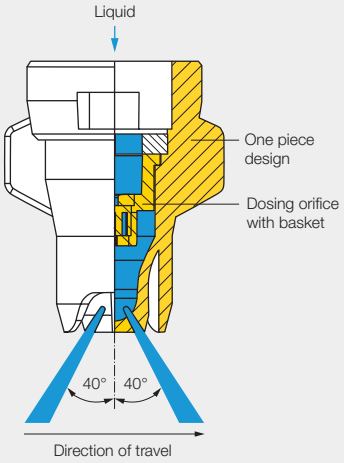

Series XDT 130

Dimensions in mm.

Dosing orifice with basket, can be removed without tools

Application:

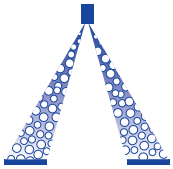

- **Plant protection products**
- **Golf course**

Technical data:

- **Nozzle sizes** 02–08
- **Spray angle** 130°
- **Material** POM
- **Pressure ranges** 1.5–8 bar
- **Recommended strainers** 50/60 M 02–08
- **Droplet sizes** Ultra coarse – extremely coarse

Asymmetrical air-injector twin flat spray nozzles IDTA

IDTA
Twin Asymmetric Full Coverage

Crop production | **Ground care**

PATENTED

Dimensions in mm.

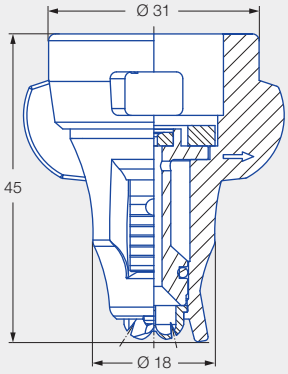

- Air-aspirating asymmetrical twin flat spray nozzle
- Extremely low-drift

Advantages

- 95 % drift reduction for: IDTA 120-05 C
- 90 % drift reduction for: IDTA 120-025 C to -04 C
- Ideal for higher sprayer speeds due to 30°/50° spray configuration
- Uniform deposition through 60/40 flow rate distribution
- Identical spray width on the target area due to 90°/120° spray angle
- Optimum wetting through finer droplet spectrum to the front in direction of travel
- Drift-reducing coarser droplet spectrum to the rear
- Optimum user protection thanks to removal/installation of the injector with protective gloves without tools
- Nozzle in cap with MULTIJET bayonet system (incl. gasket)
- Suitable for PWM

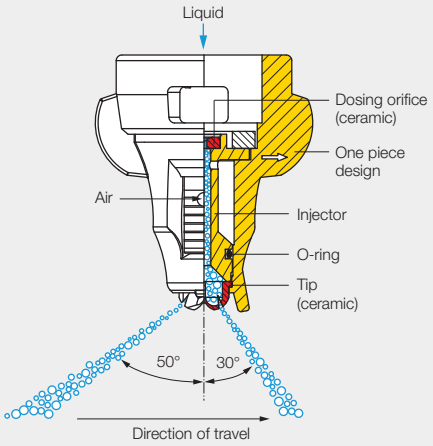

Series IDTA

Injector can be removed without tools

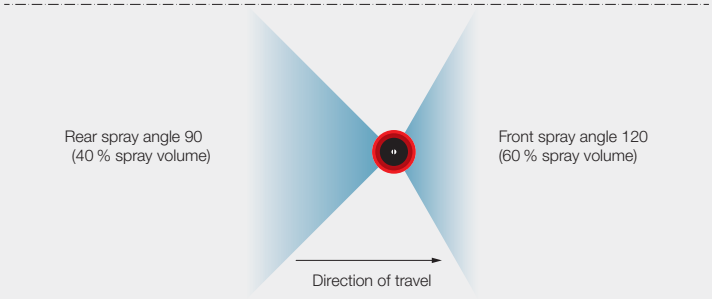

JKI approval as loss-reducing: 95/90/75 %

G 2015, G 2016, G 2017, G 2018, G 2019, G 2020, G 2021, G 2022, G 2043

JKI approval for mixed equipment and border nozzle IS.

Current list at: www.lechler.com/de-en/service/loss-reducing

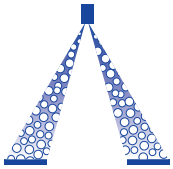

Application:

- **Plant protection products**
- **Edge application** Can be combined with border nozzle IS 80
- **Golf course**

Technical data:

- **Nozzle sizes** 02–08
- **Spray angle** 120° front/ 90° rear
- **Material** Ceramic
- **Pressure ranges** 1–**4**–**8** bar
- **Recommended strainers**
  - 80 M 02
  - 50/60 M 025–08
- **Droplet sizes** Ultra coarse – coarse

Compact symmetrical air-injector twin flat spray nozzles IDKT

Crop production | Ground care

Dimensions in mm.

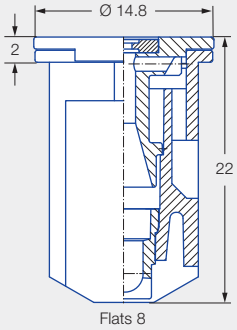

- Very low-drift, air-aspirating twin flat spray nozzle

Advantages

- Optimum deposition thanks to symmetrical twin flat spray jet 30°/30°
- Reduced spray shadow
- 90 % drift reduction for: IDKT 120-02 to -06
- Compact design
- Low drift and loss-reducing in the pressure range up to 3 bar (depending on size)
- Suitable for PWM

IDKT **IDKT-C**

JKI approval as loss-reducing: 90/75/50 %

G 1836, G 1837, G 1865, G 1882, G 1883, G 1884, G 1911, G 1912, G 1932, G 1933, G 1934, G 1935, G 1937

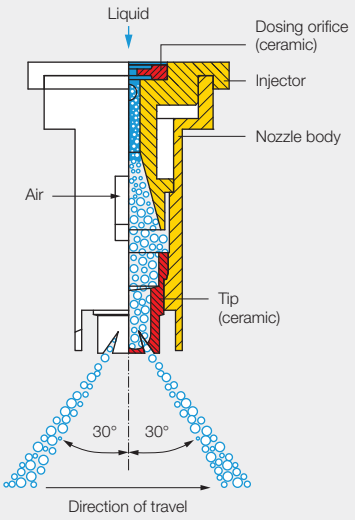

JKI approval for mixed equipment and border nozzle IDKS.

Current list at: www.lechler.com/de-en/service/loss-reducing

Series IDKT

Injector can be removed without tools

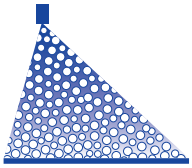

Application:

- **Plant protection products**
- **Spray frame**
- **Edge application** Can be combined with border nozzle IDKS 80
- **Golf course**
- **Greenhouse**

Technical data:

- **Nozzle sizes** 015–10
- **Spray angle** 120°
- **Materials** POM, ceramic
- **Pressure ranges**
  - IDKT 015 to -025 **1.5–3**–6 bar
  - IDKT 03 to -06 1–**1.5–3**–6 bar
- **Recommended strainers**
  - 80 M 015–02
  - 50/60 M 025–08
  - 25/30 M 10
- **Droplet sizes** Ultra coarse – medium
- **Width across flats** 8 mm

Air-injector off center spray nozzles
IS 80

Crop production | Ground care

Dimensions in mm.

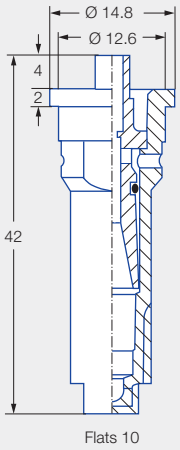

- Air-aspirating off center nozzle for border application and banding
- Extremely low-drift

Advantages

- 90 % drift reduction for band spraying with IS 80-03
- Same JKI drift reduction class in combination with ID/IDTA nozzles in the field spray boom
- Volume flow adapted for optimum cross distribution in combination with ID/IDTA nozzles of the same size
- Asymmetrical spray pattern (20°/60° to axis)
- Precise edge application along water courses and field boundaries
- Optimum protection of neighboring crops (field border application) or row/special cultures (herbicide underleaf spraying/banding)
- Suitable for PWM

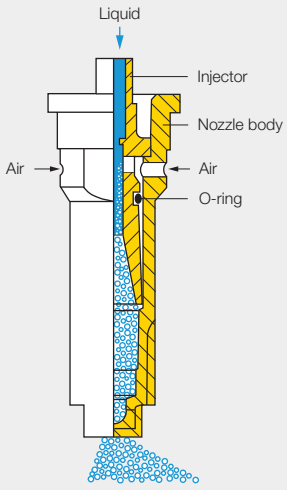

Series IS 80

Injector can be removed without tools

JKI approval as loss-reducing: 90/75/50 %

G 1753, G 1754, G 1755, G 1999, G 2000, G 2087

JKI approval with ID/IDTA nozzles of the same size.

Current list at: www.lechler.com/de-en/service/loss-reducing

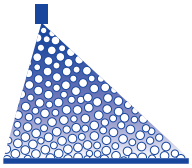

Application:

- **Border nozzle**
- **Band spraying in orchards and vineyards**
- **Vertical boom**
- **Spray frame**

Technical data:

- **Nozzle sizes**
  02–06
- **Spray angle**
  80°
- **Material**
  POM
- **Pressure ranges**
  - Field sprayer/ underleaf sprayer: 2–**4**–**8** bar
  - Vertical boom: 2–**8**–**15** bar
- **Recommended strainers**
  - 50/60 M 02–04
  - 25/30 M 05–06
- **Droplet sizes**
  Ultra coarse – medium
- **Width across flats**
  10 mm

Compact air-injector off center spray nozzles IDKS 80

Crop production | **Ground care**

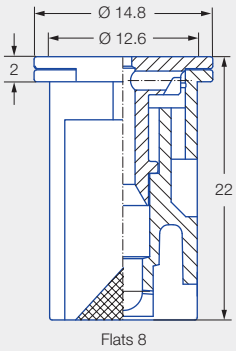

Dimensions in mm.

- Compact, air-aspirating off center nozzle for border application and banding
- Very low drift

Advantages

- 90 % drift reduction for band spraying with IDKS 80-025 to -06
- Same JKI drift reduction class in combination with IDK/IDKN/IDKT nozzles in the field spray boom
- Volume flow adapted for optimum cross distribution in combination with IDK/IDKN/IDKT nozzles of the same size
- Precise edge application along water courses and field boundaries
- Optimum protection of neighboring crops (field edge application) or row/special cultures (herbicide underleaf spraying/banding)
- Suitable for PWM

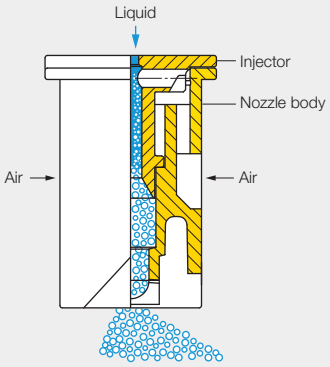

Series IDKS 80

Injector can be removed without tools

JKI approval as loss-reducing: 90/75/50 %

G 1786, G 1787, G 1788, G 1789, G 1998, G 2139, G 2140, G 2141, G 2142, G 2143

JKI approval with IDK/ IDKN/IDKT nozzles of the same size.

Current list at: www.lechler.com/de-en/service/loss-reducing

Application:

- **Border nozzle**
- **Plant protection in viticulture, orchard and specialty crops**
- **Vertical boom**
- **Spray frame**
- **Backpack sprayer**
- **Greenhouse**

Technical data:

Nozzle sizes
015–06

Spray angle
80°

Material
POM

Pressure ranges
- Field sprayer/ underleaf sprayer: 1–**1.5–3**–6 bar
- Vertical boom: 1–**8–15** bar

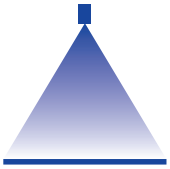

Recommended strainers
- 50/60 M 015–04
- 25/30 M 05–06

Droplet sizes
Ultra coarse – medium

Width across flats
8 mm

NEW

Spot flat spray nozzle
LS 20

Crop production | Ground care

Dimensions in mm.

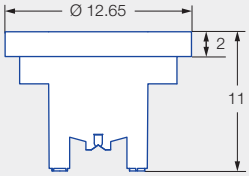

- Narrow flat spray nozzle for precise applications

Advantages

- Ideal for precise spot spraying (< 5 cm)
- Ideal for spray booms with small nozzle spacing (3–10 cm) and low spray heights
- High accuracy for small spots (< 5 cm)
- Reduced drift at low spray pressure
- Normal lateral distribution
- Compact design
- Suitable for PWM

Series LS 20

Application:

Robots and spot sprayers

Technical data:

Nozzle sizes
005 und 02

Spray angles
20°

Material
POM

Pressure ranges
2–5 bar

Recommended strainers
- 80 M 005
- 50/60 M 02

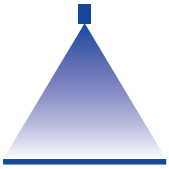

Droplet sizes
Extremely coarse – fine

Width across flats
8 mm

NEW

Even Flat Spray Nozzle
ARE 30

ARE
Antidrift Row Evenspray

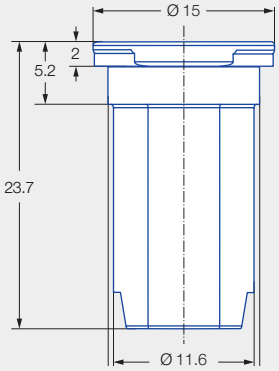

Crop production | Ground care

Dimensions in mm.

- Extremely low drift flat spray nozzle with pre-atomizer
- Flat spray with rectangular distribution

Series ARE 30

Advantages

- Non-Venturi nozzle
- Extremely high drift reduction potential
  – Rectangular distribution
- Narrow spray angle of 30°
  – Band widths from 5–30 cm
- Compact design
- Robust housing: Nozzle protected against damage
- Pre-atomizer can be removed without tools
- PWM compatible

Application:

band sprayer or field sprayer

Backpack sprayer

Technical data:

Nozzle sizes
0067–03

Spray angles
30°

Material
POM

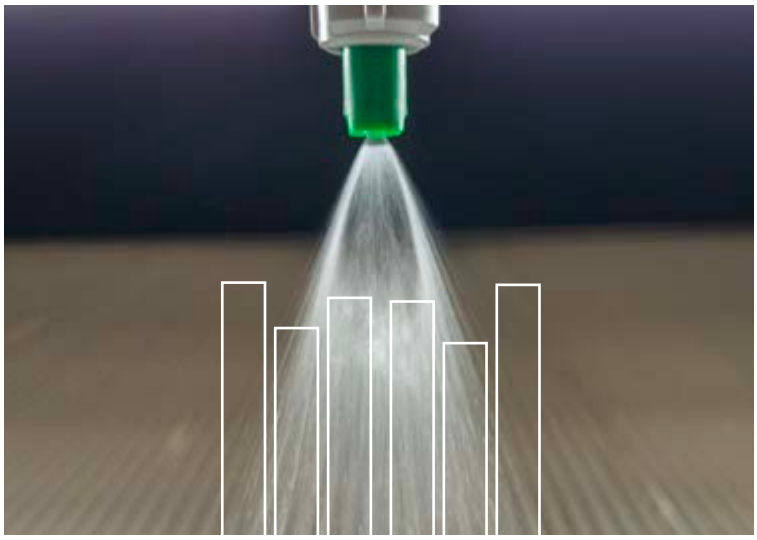

Pressure ranges
1,5–6 bar

Recommended strainers
- 80 M 0067–01
- 50/60 M 015–03

Droplet sizes
Mittel–extrem grob

Width across flats
10 mm

Fluid distribution

Even flat spray nozzles
E

Crop production | **Ground care**

Dimensions in mm.

- Flat spray nozzle with rectangular liquid distribution
- For band and row spraying

Advantages

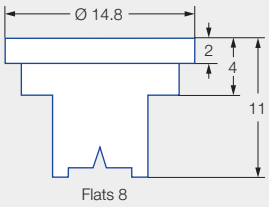

- 90 % drift reduction for 8002 to 8004 E
- Fully formed spray angle from 1 bar
- Uniform active ingredient distribution over the whole band width
- Extremely small spraying distances possible
- Suitable for PWM

E

E-M

JKI approval as loss-reducing: 90 %

G 1435, G 1436, G 1437, G 1438

Current list at: www.lechler.com/de-en/service/loss-reducing

Series E

Spray height H [cm]	Band width B [cm]	Product application quantity[1] [%], at row spacing A		
		50 cm	75 cm	100 cm
7	10	20	13	10
10	15	30	20	15
13	20	40	27	20
16	25	50	33	25

[1] Percentages, in comparison with full-area treatment.

Reduction in application rate

Depending on the band and row width, the amount of spraying liquid for band spraying amounts to 10–50 % of the amount for full-area treatment. Calculation formula for band and row spraying, see Lechler app.

Application:

Backpack sprayer

Band spraying

Technical data:

Nozzle sizes
01–08

Spray angle
80°

Materials
Brass, POM

Pressure ranges
1–3–4 bar

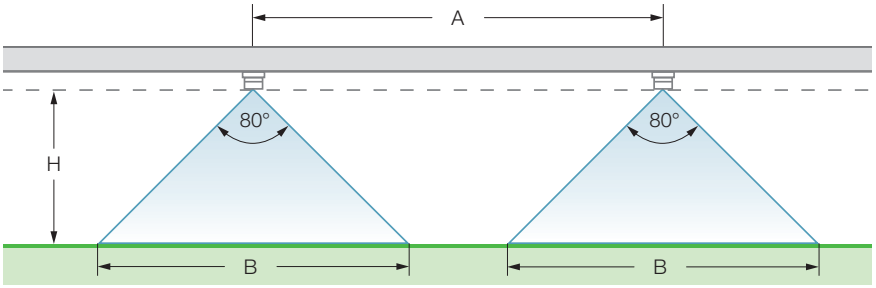

Recommended strainers
- 80 M 01–015
- 50/60 M 02–04
- 25/30 M 05–08

Droplet sizes
Very coarse – very fine

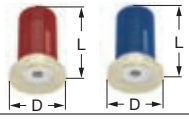

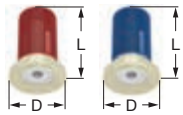

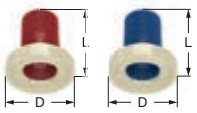

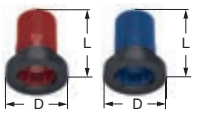

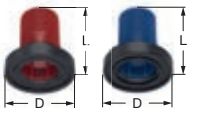

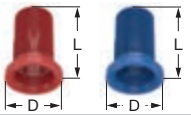

Width across flats
8 mm

Nozzle adjustment

Extremely small spray heights (H) possible with even flat spray nozzles E. Band drift can be largely avoided. The band width (B) can be adjusted by changing the spray height (H) and/or rotating the spray axis.

Accessories
MANOMETER-KIT and electric border nozzle kit

- Assistance kit for calibrating nozzles and spray pressure testing

Advantages

- Assistance kit for calibrating nozzles and spray pressure
- Blue extension hose allows the nozzle to be measured away from the boom ideally for:
  – Twin flat spray nozzles
  – Nozzles with horizontal spray pattern e.g FT, FD, VR, FL
- Stay dry: No more getting wet when calibrating the nozzle
- Precise spray pressure check: Test the actual spray pressure at the nozzle
- Robust and durable: Liquid fertilizer and chemical-resistant kit
- Easy handling: Kit is useable with/without blue extension hose
- Compatibility: Suitable for MULTIJET bayonet system, for other bayonet systems use intermediate adapters

Order no.
092.166.00.11.00.0

With blue extension hose

Calibrating twin flat spray nozzles with SPOTON

Electric border nozzle kit

Description	Order no.
• Retrofittable, compact 3-way valve with integrated nozzle holders • Can be electrically controlled from the driver's seat • Ideally suited for FB nozzles in combination with FD nozzles, IS nozzles in combination with ID nozzles, IDK nozzles in combination with IDKS nozzles, IDTA nozzles in combination with IS nozzles and IDKT nozzles in combination with IDKS nozzles	065.290.00.00.00

Useful aids

Nozzle calculator app

Apple Android

The Lechler agricultural nozzle app makes it easy to select the right nozzle for your application.

On the basis of the selected sprayer speed and application rate, the nozzle shows you the suitable nozzles and corresponding droplet size categories. This allows you to quickly find the suitable Lechler nozzle and thus optimize your application.

All values are based on measurements with water.

Anemometer Pocketwind IV

Order no.: **ZWIN.DME.SS.ER.01**

- Backlit display
- Waterproof and shockproof housing
- Lanyard
- Hard cover protects against damage and dirt
- Tripod thread

Advantages

- Self-calibrating humidity sensor
- Hard cover protects measuring sensors against damage
- Measures all relevant application parameters

Measuring functions

- – Relative humidity
  – Dew point
  – ΔT
  – Wet bulb thermometer
- Wind speed
  – Maximum
  – Average
  – Switchable units m/s, km/h, fpm, mph, kn and bft
- Temperature/wind chill units °C and °F, switchable
- Wind direction

Nozzle Calibrator SPOTON

Order no.: **092.178.00.00.00**

Advantages

- No manual calculations or app download required
- Fast and simple operation
  – Readings in about 10 seconds per nozzle
- Accurately measure true tip flow rate
  – Plant protection equipment can only be properly calibrated and tested with this knowledge
- Displays flow rate in GPM, l/min or oz/min
- Quickly find worn, damaged or clogged nozzles
  – Nozzle replacement recommended as soon as the flow rate exceeds that of the new nozzle by 10 %

Measuring functions

- Range
  – 0.02–2.25 GPM
  – 0.08–8.52 l/min
  – 3–288 oz/min
- Resolution
  – 0.01 GPM
  – 0.01 l/min
  – 1 oz/min
- Size
  – 7.6 cm x 22 cm
- Fluid compatibility
  – For water and water-based solutions only

ISO 25358 classification according to droplet sizes:

VF	Very fine
F	Fine
M	Medium
C	Coarse
VC	Very coarse
EC	Extremely coarse
UC	Ultra coarse

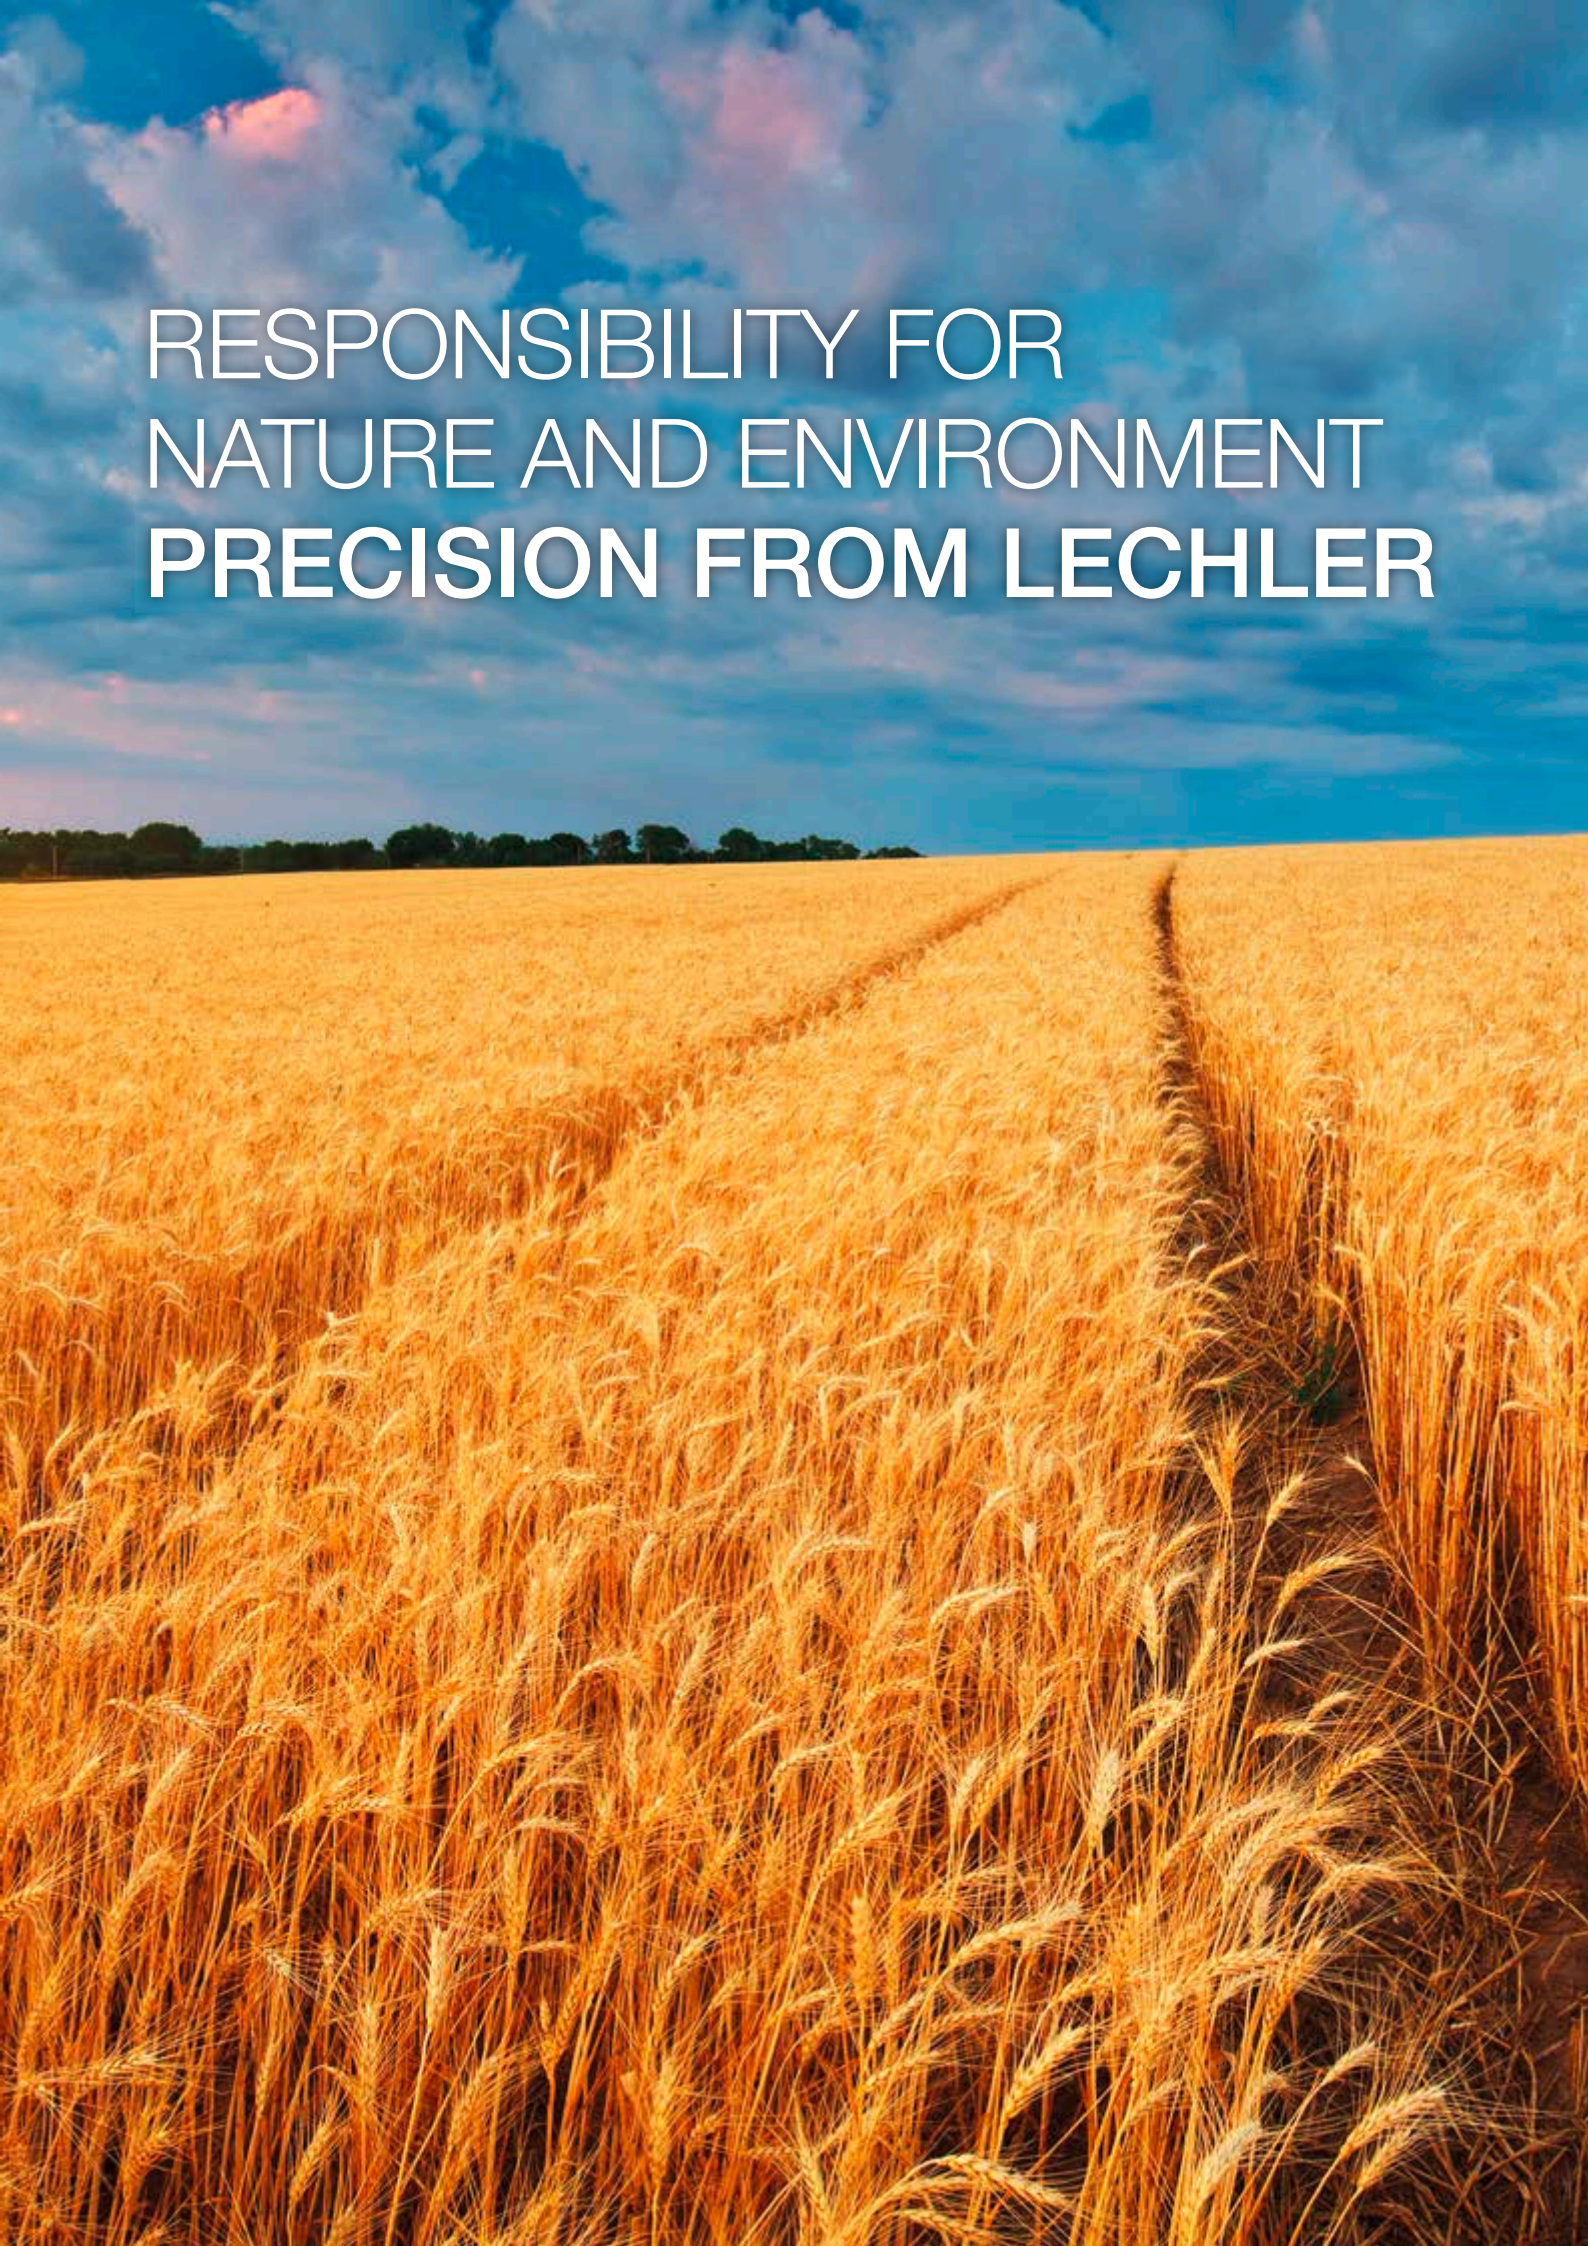

Subject to modifications.

- Operating pressure at the nozzle (measured with diaphragm valve)
- The stated liter-per-hectare rates apply to water
- Verify the table values by gauging the flow rates prior to every spraying season
- Pay attention to uniform nozzle adjustment

Nozzle calculator app

The apps for Lechler agricultural nozzles make selection and use of the optimum nozzle even easier. Find out more here: **www.lechler.com/de-en/service/apps**
