Farm-IQ | Grow

INTELLIGENCE YOU CAN GROW ON

Scan to discover Farm-IQ Grow

Simple, Smarter Crop, Nutrient & Task Management.

Keep your team connected, from office to field and back again.

RB209 recommendations, input planning, task tracking... all in one farm platform.

Grow in the office. FieldOps on the move.

Farm-IQ | Grow

Farm-IQ Grow brings field mapping, crop planning, nutrient management and task management together in one simple system. Clear, colour-coded maps help you see fields, crops and soil information together, so the farm team can all work from the same picture.

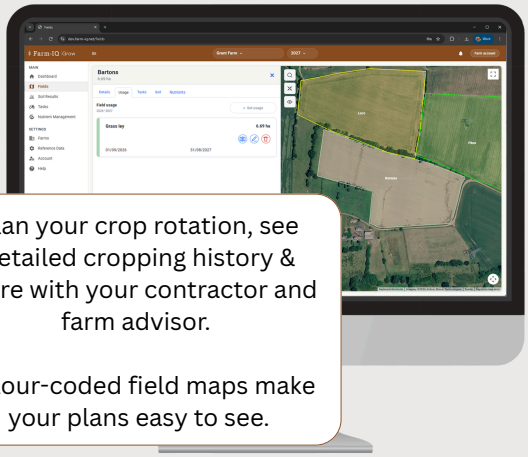

Our Nutrient Management module generates RB209 recommendations from your field and crop information. Organic material applications are automatically accounted for. Use our task planning feature to plan and execute fertiliser applications with nutrient balances tracked field by field.

Create plans (tasks) and assign them to operators in the office. With Farm-IQ FieldOps on iOS and Android phones and tablets, operators automatically receive assigned work, record products and application rates, and confirm completion directly from the tractor or field.

Invite external stakeholders to connect and share one single source of farm information.

From planning to completed work, Grow helps farmers, contractors and advisers stay connected, maintain clear records and make informed decisions.

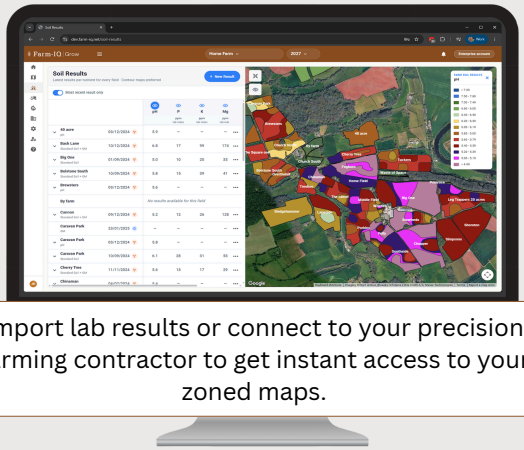

Crop Planning

Plan your crop rotation, see detailed cropping history & share with your contractor and farm advisor.

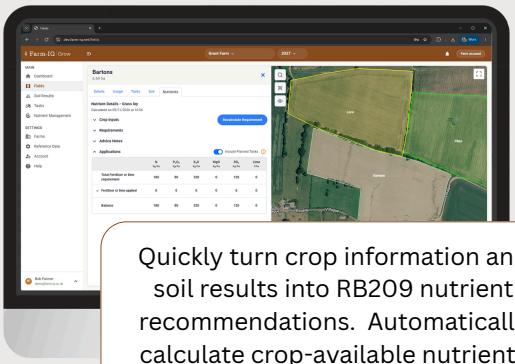

Colour-coded field maps make your plans easy to see.

Soil and Insights

Import lab results or connect to your precision farming contractor to get instant access to your zoned maps.

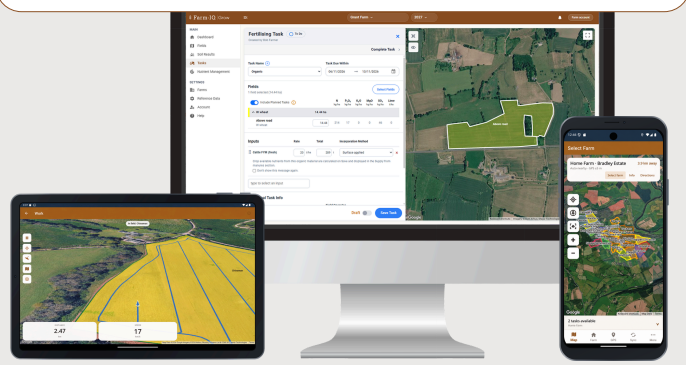

Nutrient Planning

Quickly turn crop information and soil results into RB209 nutrient recommendations. Automatically calculate crop-available nutrients from organic inputs. Track fertiliser balance requirements field by field.

Task Management

Plan spray and fertiliser tasks, assign operators and track progress in real time. Record confirmed applications using FieldOps on iOS and Android devices.
