FeedStation Walk-Through Electric

Cow-friendly concentrate feeding station with forward cow exit

The FeedStation Walk-Through Electric is a fully electric feeding station that protects the cow during feeding. Cows exit at the front, allowing them to defend themselves and preventing unnatural movements.

See how the
FeedStation Walk-Through Electric works here

The FeedStation Walk-Through Electric

- ✓ prevents hoof strain due to forward exit
- ✓ enables fast and calm cow transitions at the feed station
- ✓ protects against stress and injury when rejoining the herd
- ✓ is fully electric and compatible with any feeding system

- Fully electric
- No compressed air or T'port required
- Forward exit prevents unnatural movement
- protects against udder bruising
- Cow changeovers are up to 10 seconds faster

Cow Flow and Comfort First
The FeedStation Walk-Through Electric is specially designed for calmer feed station use. Thanks to the forward pass-through, the cow's natural movement is respected, preventing stress, injuries, and hoof strain. At the same time, the next cow can enter the station while the previous cow exits, ensuring smooth cow flow.

Faster Changes, Without Stress
Changeovers are on average 10 seconds faster than with standard entry stations. The L'port Electric at the rear and the Texas gates at the front ensure the station closes automatically and safely during feeding. This contributes to higher daily capacity without compromising animal welfare.

Expandable to Your Needs
The FeedStation Walk-Through Electric comes standard with one PipeFeeder. Depending on your needs, the feed station can be expanded with multiple PipeFeeders, a MultiDos for dosing liquids or a Black-V for dosing powders. Its modular design makes expansion easy and compatible with any control system brand.
