DeltaFeeder

Durable, simple and highly accurate feeding during milking

The DeltaFeeder is specially designed for dairy farming in the United Kingdom and Ireland. This robust concentrate feeder dispenses precisely measured portions during milking, ensuring calmness in the parlour and a more efficient milking process.

See how the
DeltaFeeder works here

The DeltaFeeder

- dispenses precisely measured portions during milking (from 50 g)
- offers low energy consumption and minimal maintenance costs
- features an anti-spill system to prevent waste
- is compatible with all milking parlour systems and feed management programs

- Anti-spill system prevents waste
- Portion size from 50 grams possible
- Compatible with all milking parlour systems
- Suitable for pellets and Farmmix concentrates
- Robust industrial polyester housing

Calm and Efficiency in the Parlour
By dispensing concentrate during milking, the DeltaFeeder stimulates the production of the hormone oxytocin. This promotes milk let-down, shortens milking time, and ensures a calmer environment in the parlour. The anti-spill system prevents extra feed from falling out if a cow bumps the dispenser, minimising waste.

Accurate and Versatile
The DeltaFeeder can dispense both standard concentrate pellets and home-grown concentrates (Farmmix). The precise dosing from 50 grams per portion ensures optimal ration control. Thanks to its robust industrial polyester housing, the DeltaFeeder withstands intensive use and is compatible with different types and sizes of feed pipes.

Easy Installation and Operation
The DeltaFeeder fits into any milking parlour and is easy to install. It can be operated stand-alone via the ControlPanel in the parlour (per cow or per side) or connected to an existing feed management system. With a capacity of 15 kg of feed and low energy consumption, the DeltaFeeder is a durable and cost-efficient choice.
