

## A LEADING DEVELOPER OF **SOLAR PV & BATTERY** STORAGE PROJECTS

Island Green Power is a leading developer of renewable energy projects, with a focus on utility-scale solar farms and battery storage systems.

Our mission is to help the UK increase our solar energy generation, making more renewable energy possible whilst drastically reducing our carbon emissions.

## WHY SOLAR

The move towards renewables and the transition away from fossil fuels is an environmental and economic necessity. We need to generate large amounts of renewable power to ensure energy security and combat climate change.

### PART OF THE RENEWABLE ENERGY MIX

Solar is an essential part of the renewable energy mix, complementing other forms of renewables. Its advantage lies in the speed and ease of deployment, enabling faster power delivery compared to many other technologies.

### EFFICIENT USE OF LAND

Solar farms are typically built on land with lower agricultural value, where growing food is less viable. This allows farmers to generate extra revenue from land that is not suitable for traditional agriculture. Quick to install and uninstall, they allow for prompt land restoration post-use.

### ENHANCING BIODIVERSITY

While designed to minimise the visual impact to local communities, solar plants also benefit biodiversity and increase the range of plant species growing at a site. A well-managed solar plant can be a habitat, helping boost and protect wildlife, helping species from bees to grazing sheep.

# DIVERSIFY WITH US

---

We oversee the entire development process from start to finish including the sourcing of land, obtaining planning consents, and securing grid connections. We have developed 34 solar projects globally, including 17 in the UK and the Republic of Ireland.

## CREATE A RELIABLE, STEADY AND SECURE INCOME

---

We offer a zero-risk partnership to landowners, covering all development costs. Once the project is developed, we enter into a long-term lease of the land. Our commitment is to ensure that landowners retain stewardship over their land.

## HOW WE WORK

---

We identify suitable sites, prepare the initial designs and guide projects through the planning process. We are dedicated to responsible land use and believe our solar farms can harmoniously coexist with their environment.

## COEXISTING WITH NATURE

---

We see solar plants as a farm, utilising a natural resource to produce a vital commodity. Our strategy is to blend this new type of farming with traditional practices, ensuring ongoing agriculture by permitting livestock grazing in our developments.

## GET IN TOUCH

---

If you are interested in leasing your land or want to discuss existing projects or new opportunities, we'd like to hear from you.

We have offices located across the UK and would be happy to visit you in person.
