**Come join us as we help the Earth regain its ground**

Health benefits and productivity gains must be embedded in our approach to climate solutions. Without healthy animals there can be no productivity gains or better climate outcomes.

We are technology agnostic. Having the right solution for the right animal and setting means respecting the complexity of highly adaptable animal microbiomes. We must remain agile in order to reduce scientific risk, align with an ever-changing regulatory landscape, and make sense of supply chain opportunities.

Farmer economics are a key lever in enabling change at planetary scale. Our CowCredits are an in-demand global standard for high quality carbon credits that drive finance back into agriculture. It is only by understanding what farmers need and the impact innovations have on their animals that solutions can take hold.

## About Us

Mootral is a British company where innovation meets purpose. We are on a mission to combat climate change and enhance animal health through pioneering science and cutting-edge technology

## Why Choose Us?

Animal health, farmer economics & climate change are inextricably linked

Mootral believes that embedding health benefits and productivity gains into climate change mitigation solutions is the only way forward for sustainable animal agriculture.

### Enterix™

Enterix™ is our natural feed supplement that significantly reduces methane emissions from cattle, and has been shown to improve animal health and increase milk yields.

### Xaloo™

Xaloo™, our range of feed solutions, is formulated to support the gut health of poultry, newborn and weaned piglets, calves and rabbits. Utilising Mootral's proprietary blend of phytogenics, it aids two critical body functions – nutrient absorption and immune response.

**Our goal is to enable better agricultural outputs as to:**

01 Radically reduce methane intensity of cattle across the world

02 Eliminate the need for preventative use of antibiotics in animal rearing
