Rapid parts supply and expert advice

Do you know, that if you run a 0.5MW AD plant, every 1% loss in efficiency costs you £25,000 a year?

A breakdown is costly. Every minute you can't make biogas is losing you money that can never be made back.

Our focus is on providing fast parts availability, at fair prices. Crucially, we carry a wide stock of key parts here in the UK - with more than £500,000 of parts in our stores at any time.

We also deal with OEM suppliers across Europe and beyond, managing the importation processes, and consolidating parts packs from multiple sources.

Because we purchase parts for plants across the UK, we can secure the best prices and ensure you get the best value for money.

Global partnerships and fast access to what you need

Birch Solutions has preferred supplier partnerships with a range of leading manufacturers. We can also supply the chemicals and oils you need to run your plant effectively and efficiently.

We are the UK preferred supplier for Steverding, Paulmichl and PTM and have secured preferential rates for Suma, Vogelsang, Landia, Borger, Wangen, Vega and many more!

Partnerships with 2G, Himmel, & Pronova further strengthens our position to become a leading parts distributor for the UK AD and Agri markets

Our partnership with 2G also ensures we can support their full portfolio with parts supply. We are also able to supply 2G approved oils Mobil Pegasus and Shell Mysella and also Petro-Canada and Chevron.

Birch Solutions has a wide range of chemicals for your AD plant and can provide regular testing solutions to tailor a bespoke trace element package for your site.
