

Domestic Violence Deterrence System

Overview

The alarming statistics of domestic violence and their negative effects to the individuals and families involved are a global phenomenon.

attenti's tracking technology can be harnessed to increase the sense of security of victims, while providing improved supervision over aggressors' compliance with court orders. This is achieved through the creation of virtual security layers around the victim within which the aggressor's proximity generates a notification. Enforcement agencies are provided with early warning of potential encounters between the victim and the aggressor even when unintentional.

The **attenti** Domestic Violence Deterrence System

Enables deterrence and enforcement

Provides protection of victim at home and on the move

Enables both the victim and the aggressor to remain within the community and continue with their daily routines

Provides evidence to support victim harassment claims and facilitates prosecution processes

Key Features

Proximity alerts

Immediate notifications sent to the Monitor Center if the aggressor has entered or is nearing the victim, even when there is no GPS signal

Audible and visual alarms

If the aggressor approaches, the victim receives indications to take necessary precautions

Panic alerts

The victim unit turns into an emergency phone to the monitoring center and predefined contacts

GPS/RF Based Protection Zones

Moving protection zones around the victim & fixed restricted geo-zones for the aggressor

Tamper protected solution

Multiple detection mechanisms provide evidence of aggressor tamper attempts

Experience Counts

Attenti's fruitful cooperation with local criminal justice agencies and other government stakeholders, led to the development of domestic violence deterrence programs in Europe and South America. **Attenti, by far has the most installations worldwide and thereby the most experience in the field.**
