# NEC Forensics

Public Safety

## Collect, process and share crime scene evidence easily and securely

Our forensics case management system is used by 70% of UK police forces, helping officers, investigators and laboratory staff to keep a complete chain of custody at all times.

From recovering exhibits at the scene to presenting them in court, our systems create a central repository for your data; making it easier to share between agencies and connect with national systems.

Our focus is ensuring you have the tools you need to make your job easier; reducing admin time and streamlining case management, so you can focus on capturing solid evidence and securing convictions.

We're constantly developing technologies to help you when you're out in the field through mobile evidence collection, which is helping support faster, more accurate decision making.

Our forensics case management system will give you confidence in the evidence you're collecting and help build public trust; by making it harder for criminals to get away with committing crime in your community.

## Technology supporting science, supporting justice

- Reassure victims of crime that you're gathering the right data to bring criminals to justice through a single, reliable source of information.
- Collecting, analysing and storing scientific data in one place supports the case from crime scene to courtroom.

## More efficient recording and tracking

- Set up intelligent forms that request information in priority order so that vital evidence is preserved.
- Built-in workflows with smart processes such as barcode identifiers take away the need for paper-based searches.

## Share evidential data across agencies

- Users get a single, accurate and up to date view that can be shared across agencies to build winning cases.
- Open integration makes it easier to connect to national and local systems with our open APIs.
- Ready to integrate to the eDNA service and the PNC.
- Better integration with third party systems reduces re-keying, so you can use your time better.

## Take evidence collection mobile

- Take digital evidence collection mobile so that your investigators can capture accurately at the scene of the crime.
- Enable your CSIs to submit fingermarks to the Bureau remotely to speed up investigations.
- Make it possible to record evidence digitally even in remote areas through an offline mobile mode.

## Trusted and secure

- Highly secure with built-in role-based access levels allow you to manage risk and give your teams the access they need.
- We've been delivering policing solutions for decades, so you can rest assured you're in safe hands.
