#### **GENERAL RIGGING INFORMATION**

#### Standard banners

- 20 A standard banner is a straight, flexible banner, normally made from PVC/vinyl.
- **21** Banners shall be fit for suspension. Suppliers shall be responsible for the integrity of banners and their suspension fittings. Screw-in eyes are not acceptable and the venue reserves the right to refuse to allow the suspension of any banners where the suspension fitting supplied is inadequate.
- 22 Any drop-weighting applied to the bottom of banners must be within a sealed pocket enclosed by one of the following methods: stitching, vinyl welding, cable ties fixed taut through eyelets, or fixed with heavy-duty stapling and large head screws and washers. The weight must not be allowed to move around within the pocket.

#### Modular structures & banners

- 23 Modular structures include standard truss systems and modular banners.
- **24** Modular structures must be assembled and used according to the manufacturer's specifications, with braces correctly aligned and connectors correctly fitted.
- **25** Lighting, sound and audio-visual equipment must be attached to truss by standard industry hook clamps and secondary safety fixings.
- 26 Textile fabric infills must comply with BS 476-Part 7 (Class 1) and be thoroughly porous so as not to inhibit the effectiveness of any fire protection system within the hall. Fabric must not inhibit the effectiveness of the venue's permanent emergency lighting or heating/ventilating plant.

### Custom-built/bespoke structures

- 27 Custom-built/bespoke structures include items that have been constructed from non-modular materials, e.g. wooden structures and exhibits.
- **28** Such items are classed as 'complex' and the complex structure procedure set out in the Stand Plans section must be followed, in order for them to be rigged.
- **29** Bolts must be used on all joints and connections. Screws are not acceptable for joining members together.
- **30** Rated, closed lifting eyes only are to be used; they must be integrated into the design and suitably bolted through the structure.
- 31 Lifting points should be clearly identified and be suitable for the lifting operation.
- **32** Materials used in construction must comply with the guidance in the 'Construction Materials' section of the Stand Construction section.

More guidance on rigging is available in the e-guide., which can be viewed at the link below

https://www.aev.org.uk/e-guide
