ARTIFICIAL INTELLIGENCE AS AN INTEGRATED FORCE MULTIPLIER

September 11, 2019

MR STUART GARDINER| System Solutions Architect

Introduction: AI as an Integrated Force Multiplier

Stuart Gardiner

System Solutions Architect

- **Role:** Member of the CTO Office at TRL Technology, a subsidiary of L3HARRIS, specializing in Enterprise Solutions for CEMA.
- **Background:** Extensive experience across multiple domains and the capability lifecycle, focused on delivering critical mission outcomes.
- **Objective:** Identification of an approach to consider the use of Artificial Intelligence as an Integrated Force Multiplier.

L3HARRIS™

L3Harris Technologies is an agile global aerospace and defense technology innovator, delivering end-to-end solutions that meet customers' mission-critical needs.

Integrated Force Multipliers

1

- > Illustration of a general model to understand Integrated Force Multiplication (IFM).
- > Convergence and divergence of Technology and Operational Understanding for IFM.
- > General examples of IFM to convey evolution overtime.
- > Enabling role of Data Science, Machine Learning for AI as an IFM.

Evolving Concepts of Operation

2

- > Identification of the driving factors behind the evolution of data and information.
- > Assessment of the impact of evolving and dynamic information dependent CONOPs.
- > Key elements of the advancement of information driven CONOPs.
- > Identification of key components and characteristic of information CONOPs

AI Candidate Scenarios

3

- > Overview of the resulting operational environment established from information CONOPs.
- > Identification of prevalent Edge and Enterprise technologies present in the environment.
- > Discussion of candidate AI IFM scenarios for Edge technologies.
- > Discussion of candidate AI IFM scenarios for Enterprise technologies.

Force Multiplication: Core Components

Force Multiplication Impact

- Illustrative concept to show the impact of IFM <
- Impact of IFM should be considered from multiple perspectives <
- Convergence of operational understating and S&T <
- Difference between Force multiplication and IFM <

Science and Technology

- > Underpinning enabler to any integrated force multiplier
- > Research, academia and enduring drive IFM convergence
- > Science and Technology threads exist for multiple IFM themes
- > Genuine scientific and technological breakthroughs are a catalyst

Operational Exploitation

- New doctrine and Concepts of Operation may be required <
- Impact assessment on training and expertise to maximise benefit <
- OODA loops applied pre and post convergence of initial IFM <
- OODA loops for operational employment and adaptive evolution <

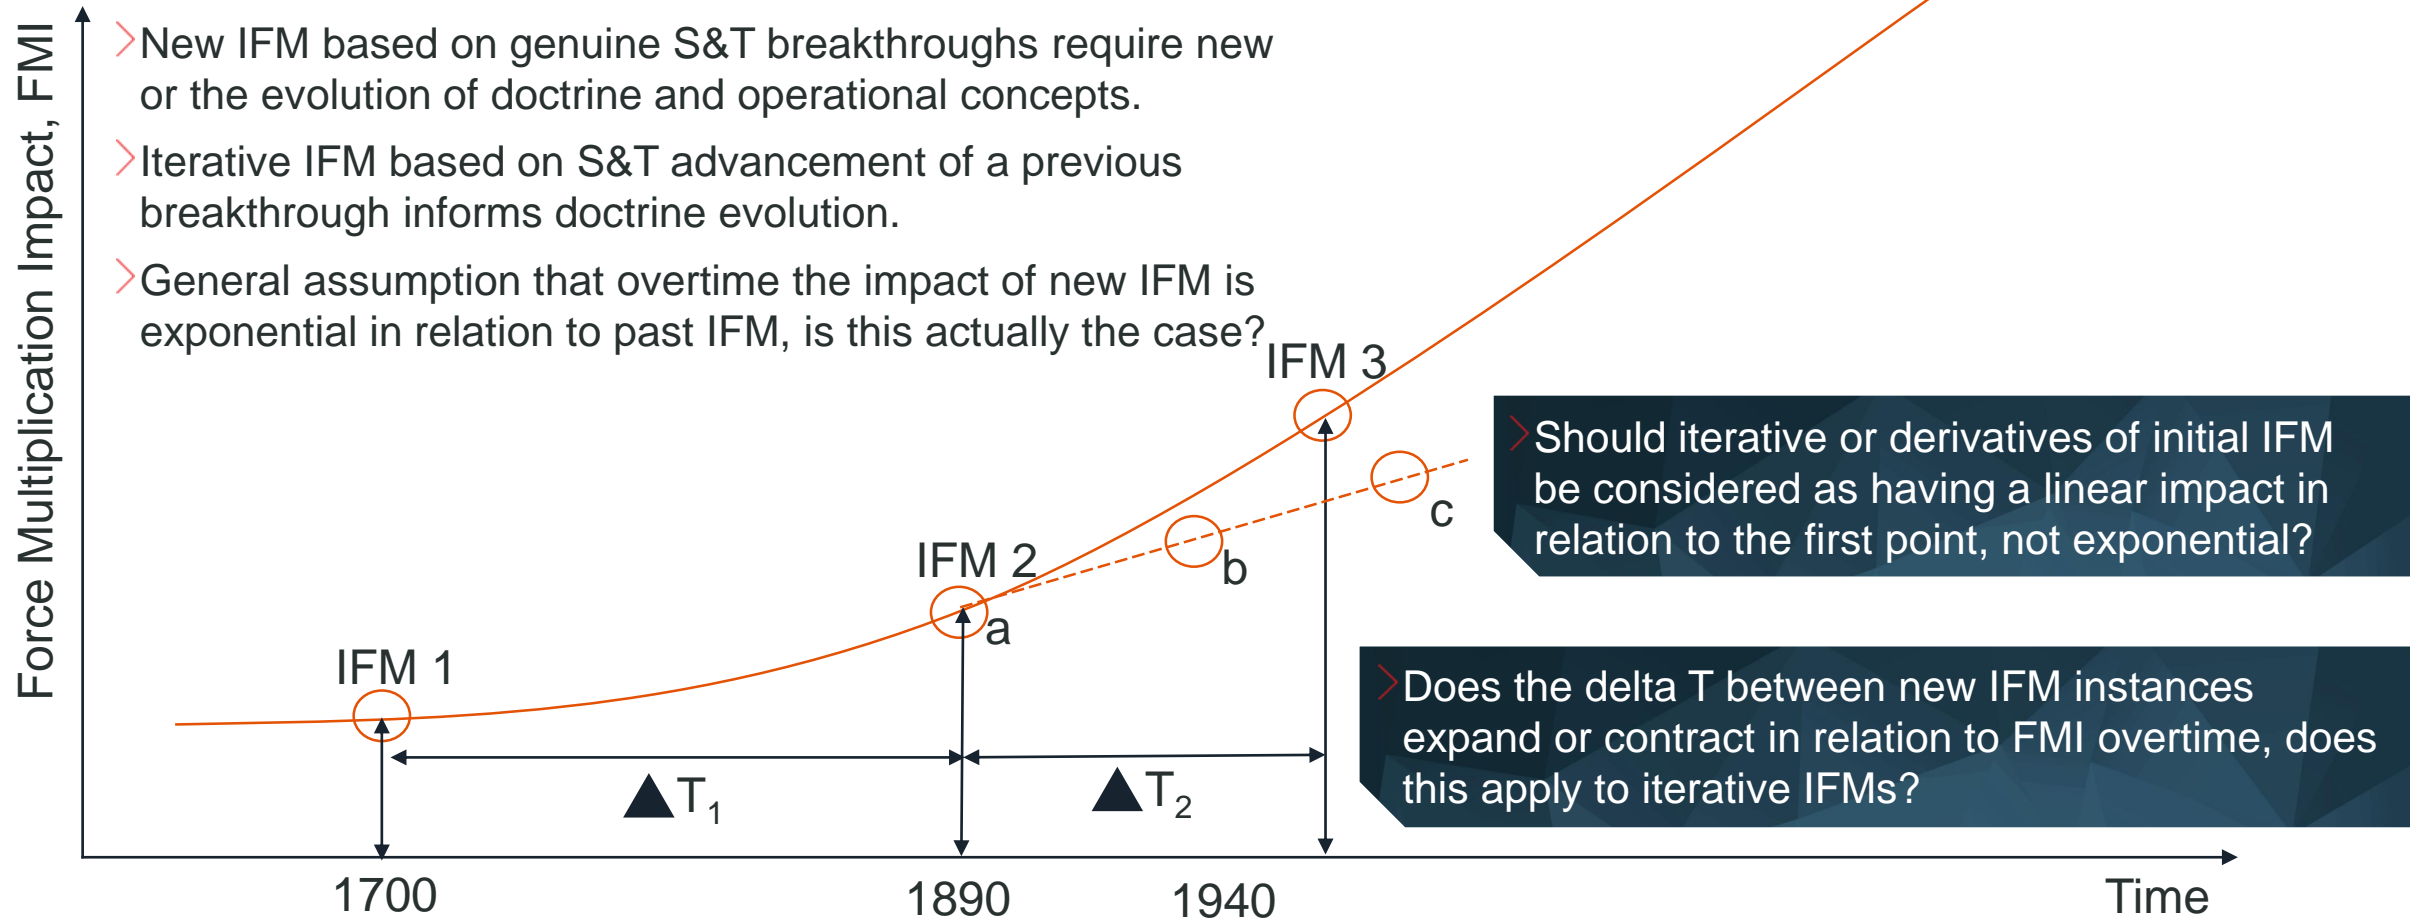

Time

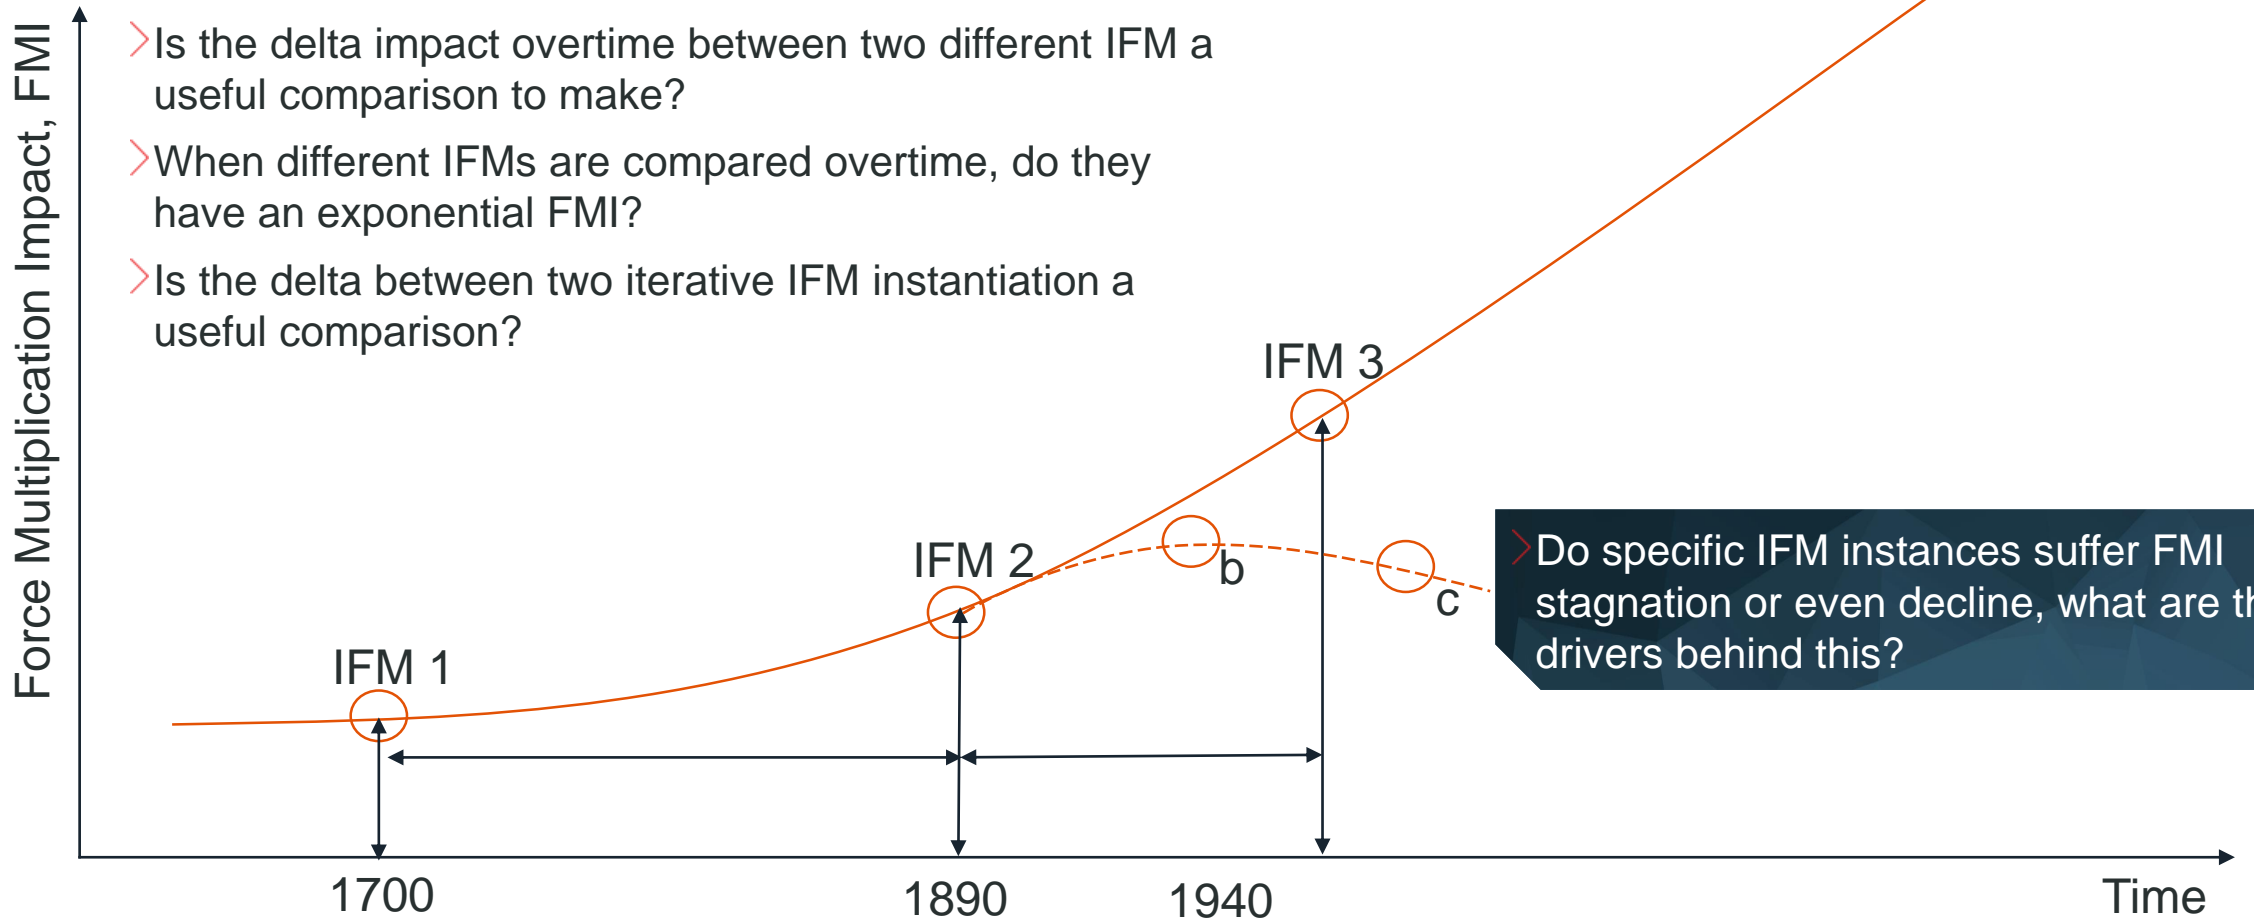

- > Trends and influences over hundreds of years
- > Impact of rapid technological shifts over tens of years
- > Evolution of generational warfare, first, second, third and fourth
- > Time deltas between IFM convergence and divergence

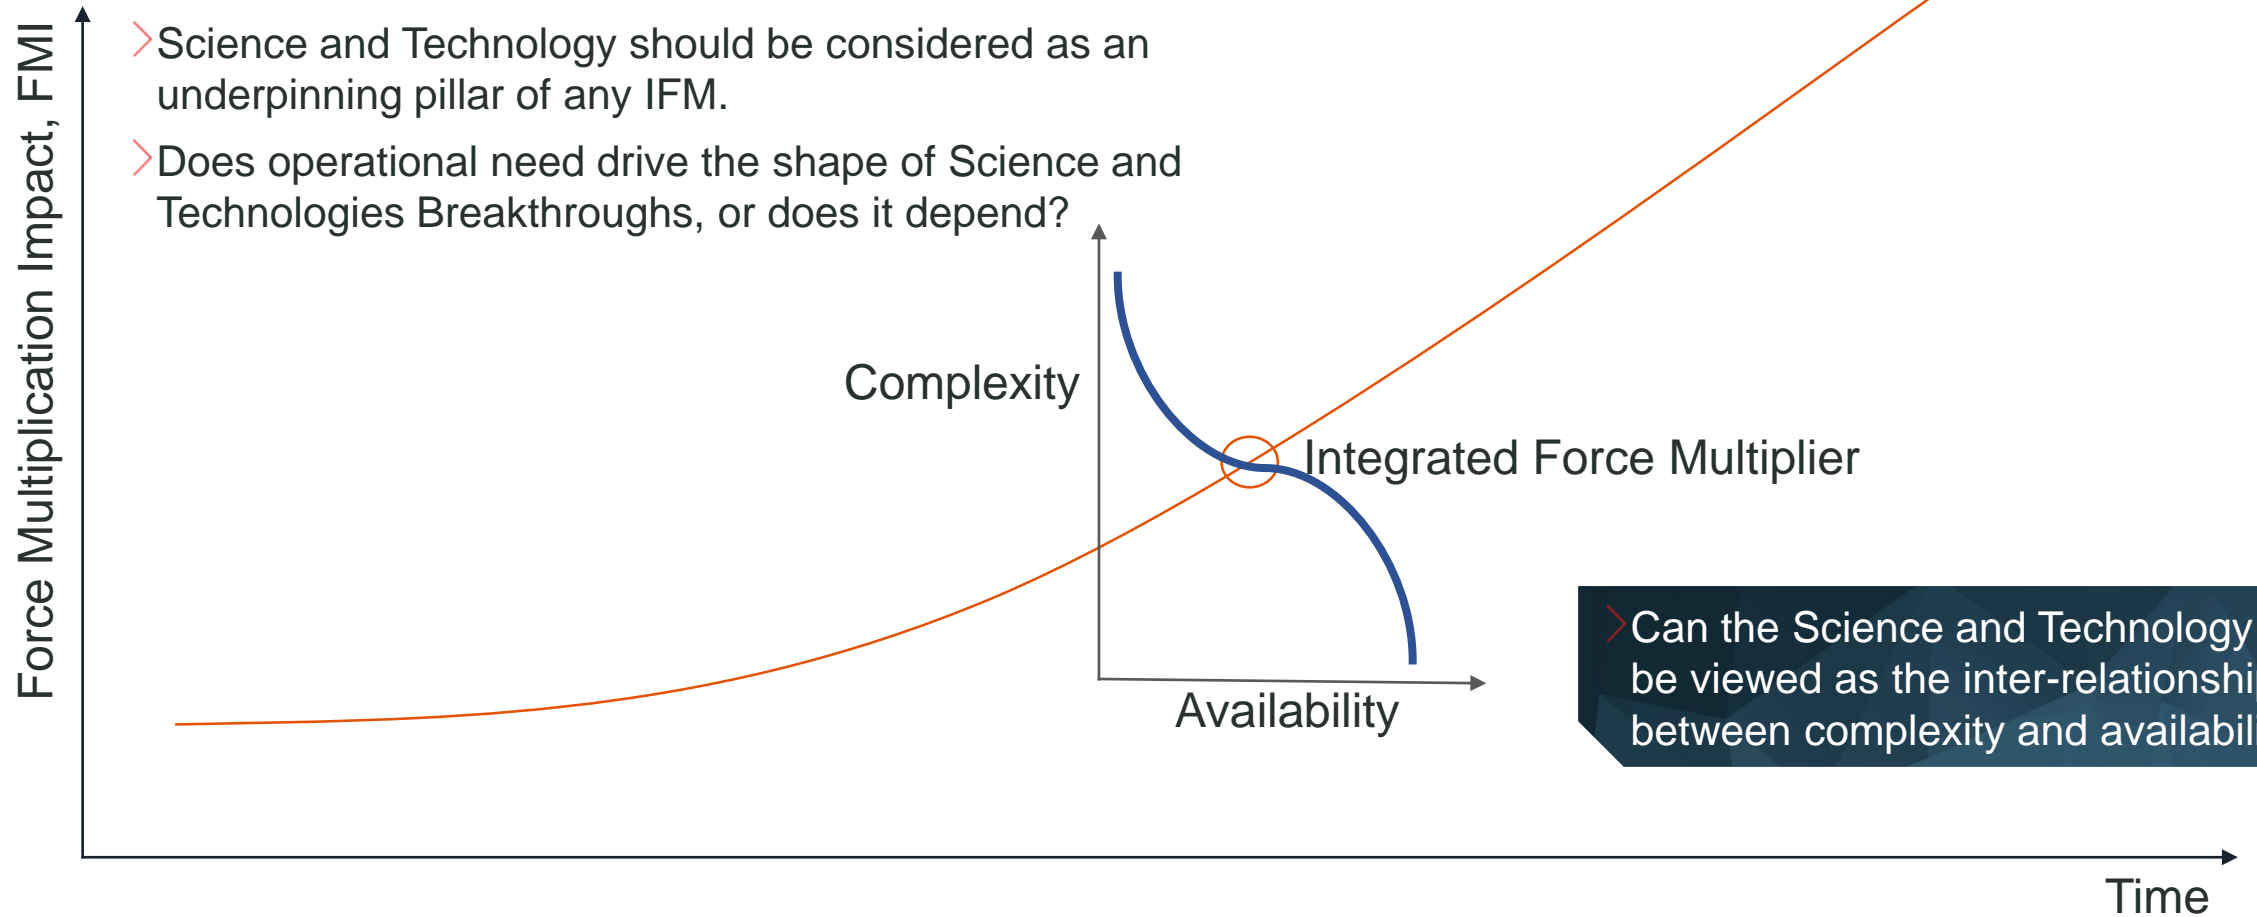

Force Multiplication: General Model

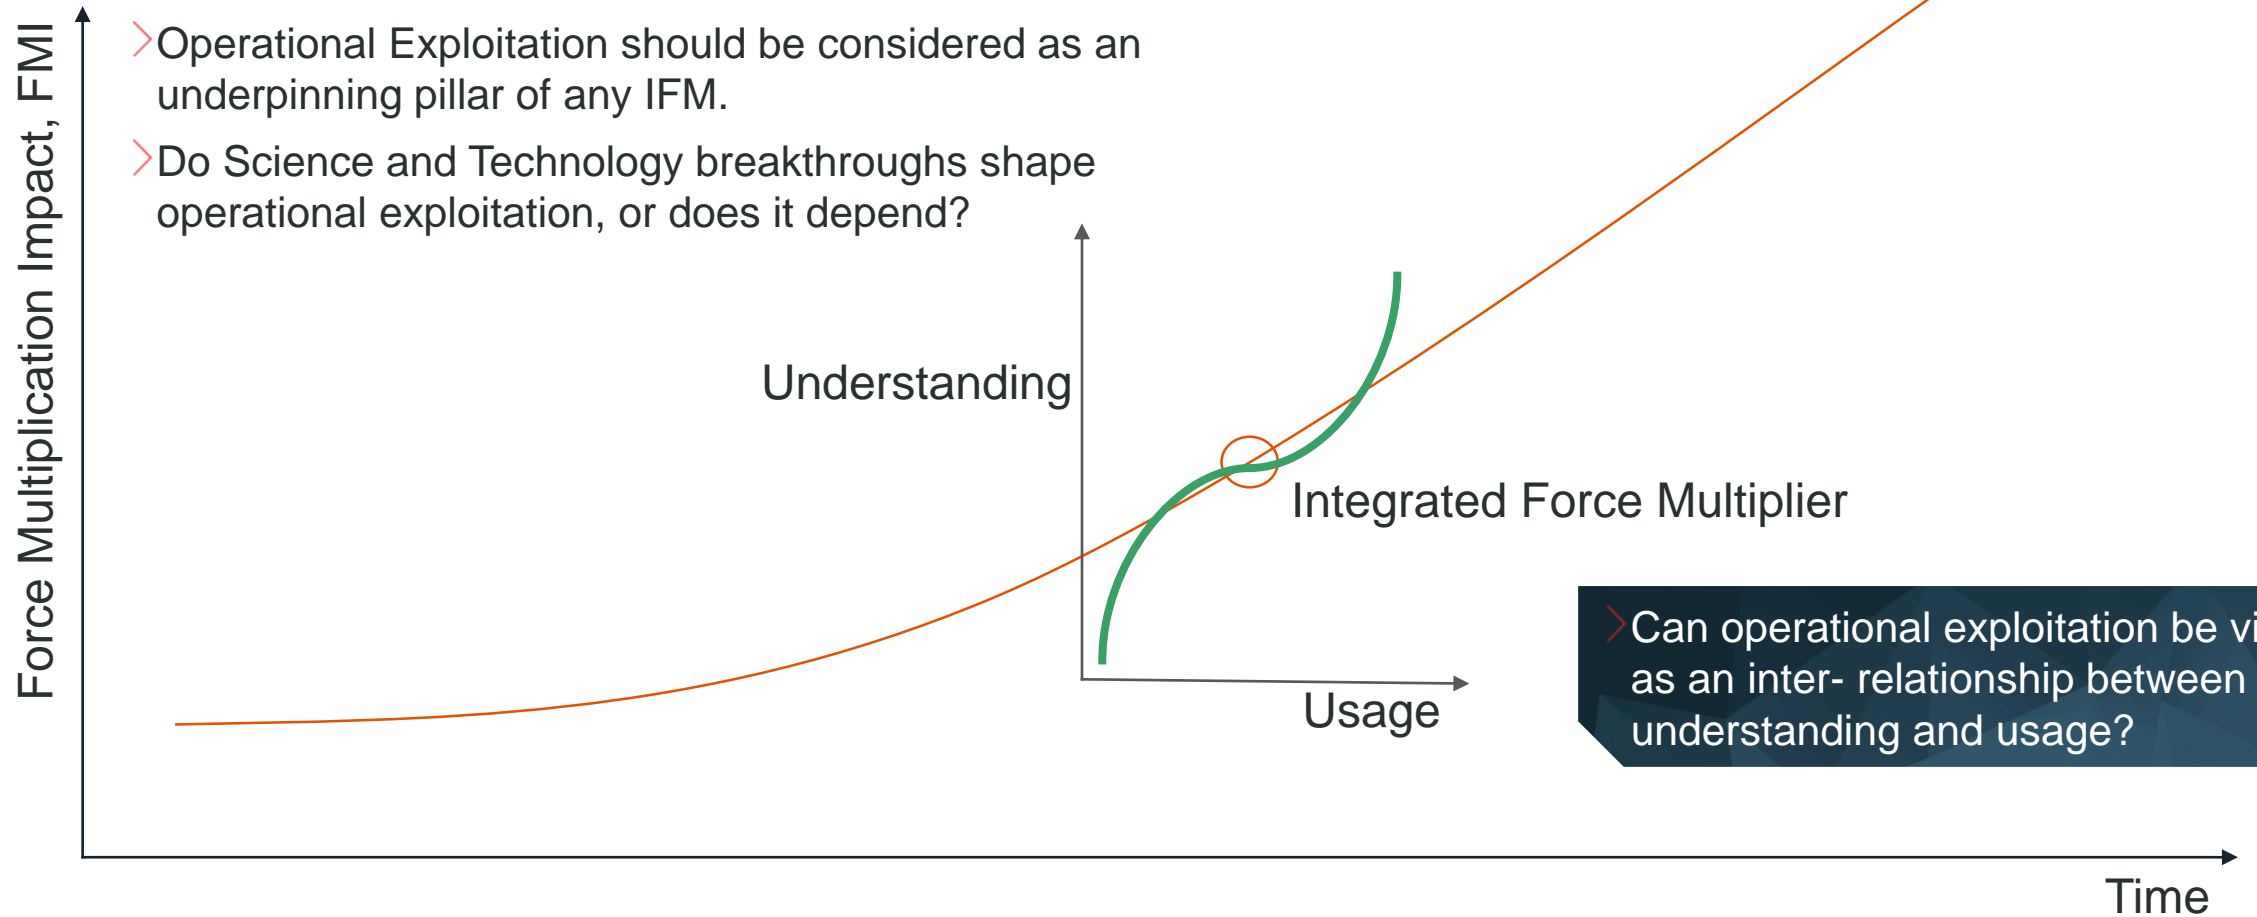

Force Multiplication: General Model

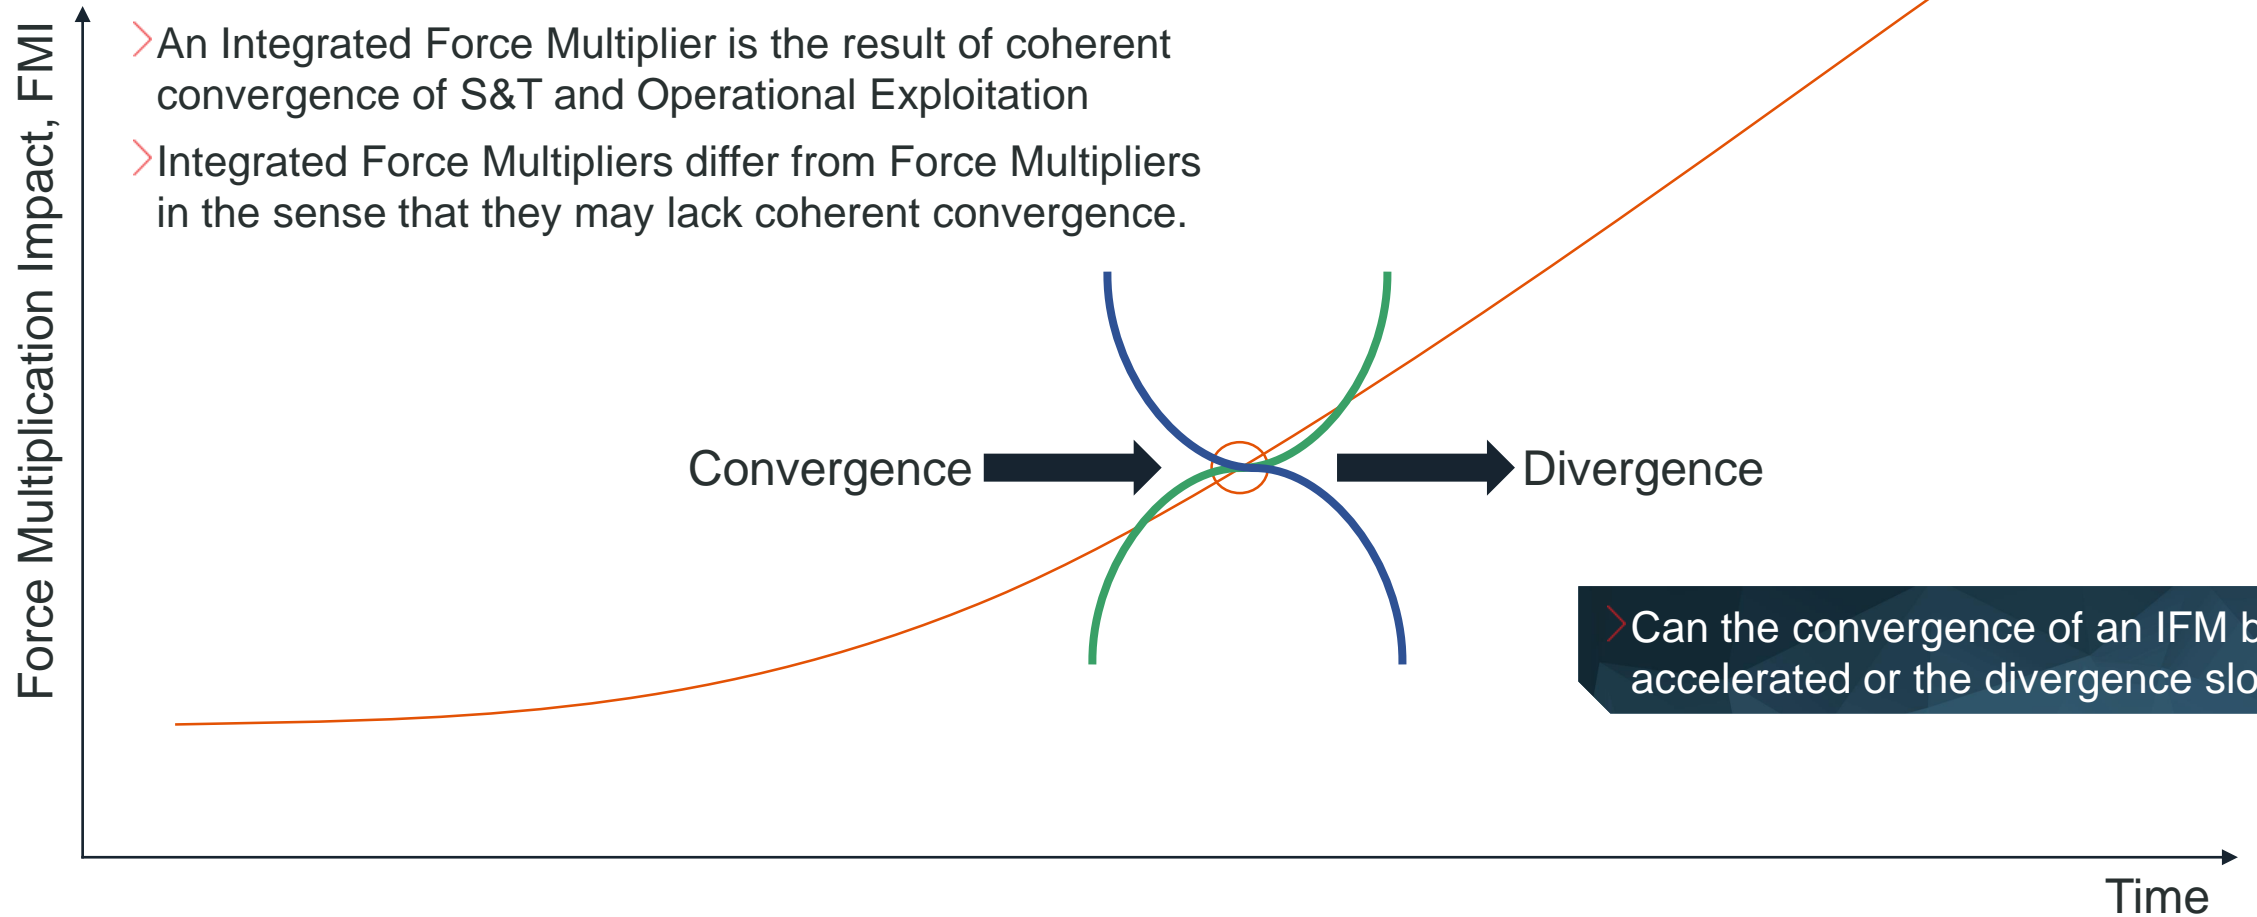

Force Multiplication: Science and Technology

Force Multiplication: Operational Exploitation

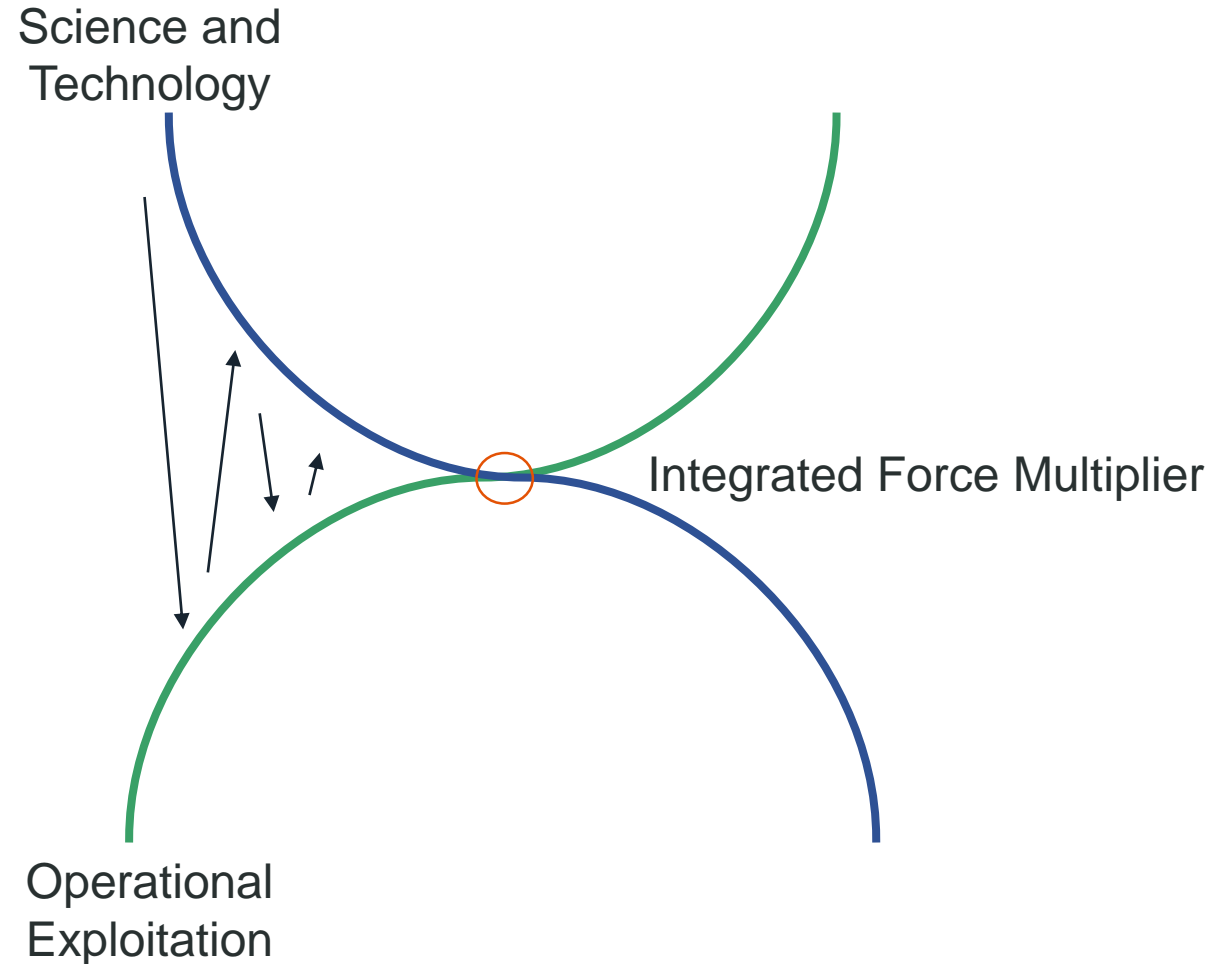

Force Multiplication: Pillar Inter-relationships

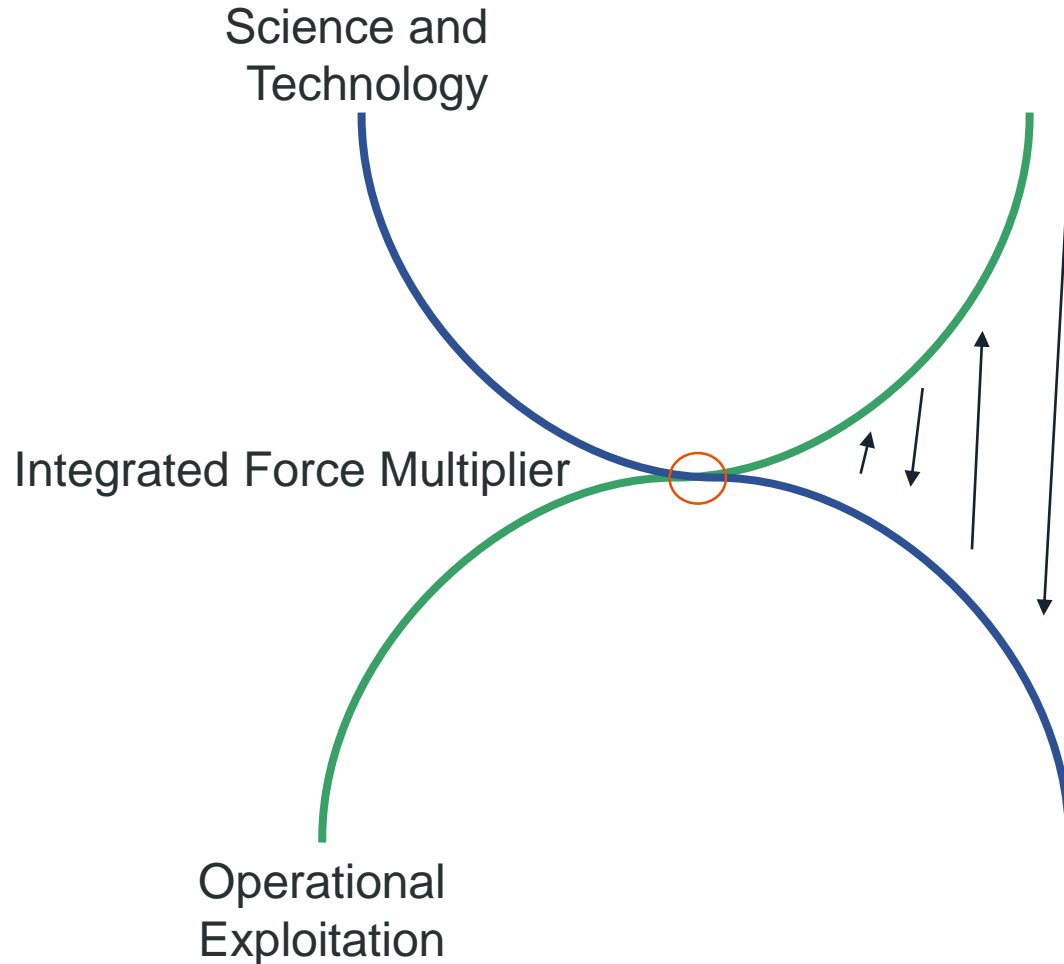

Force Multiplication: Convergence

- > The convergence of Science and Technology with Operational Exploitation are fundamental to an IFM
- > Convergence is driven by the collaboration of the two pillars;
 - > Does Scientific and Technology Breakthroughs feed the development of Doctrine?
 - > Does the constant evolution of Doctrine inform the direction of effort to generate S&T breakthroughs?
- > Continued iterative engagements are used to align S&T with operational exploitation this includes;
 - > Doctrine, CONOP, CONEMP, DLODs,
 - > Experiments, Concept & Field Demonstrators, IOC ETC
- > The convergence of these pillars is the differentiating factors between a Force Multiplier and an Integrated Force Multipliers

Force Multiplication: Divergence

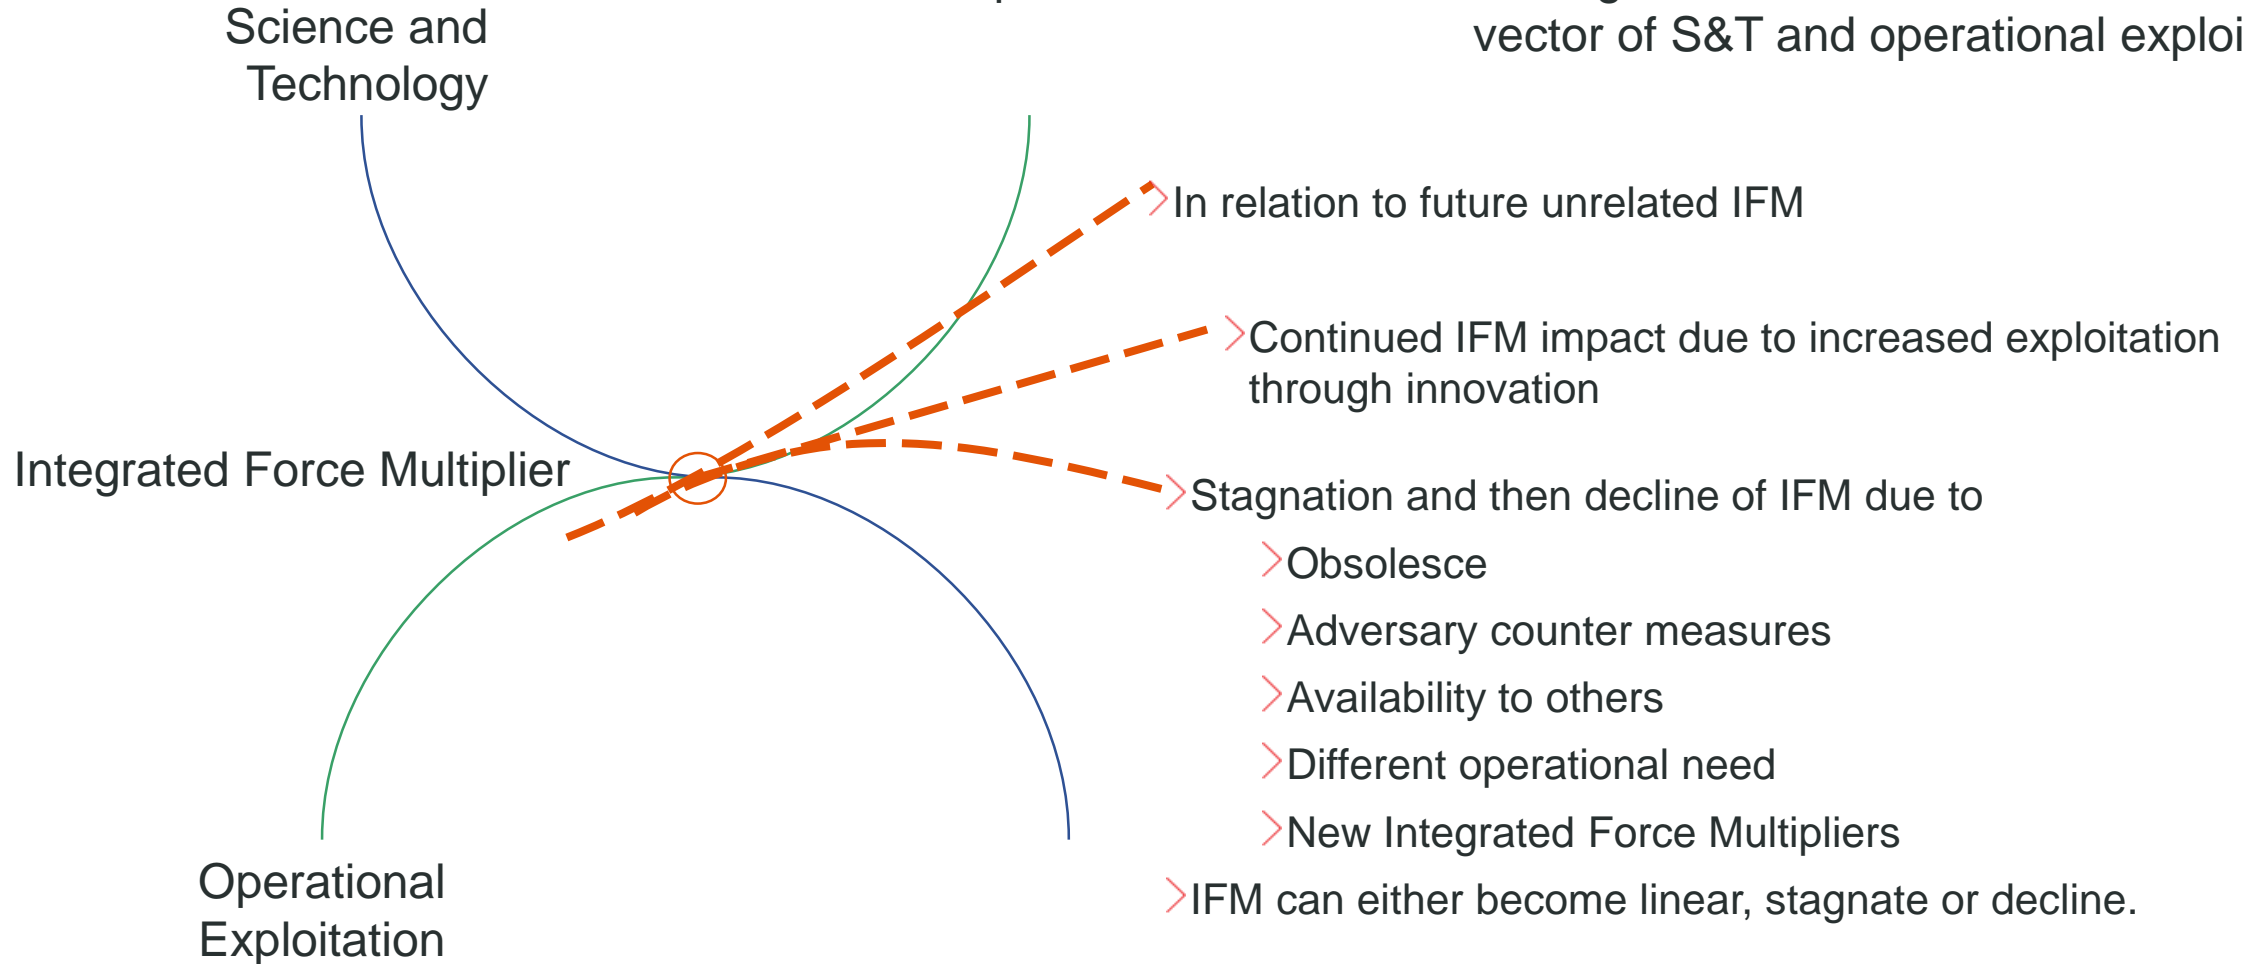

- > The divergence of Science and Technology with Operational Exploitation is key phenomenon to understand
- > Divergence is driven by the inherent nature of the two pillars;
 - > Does availability of a specific IFM to others and adversaries have a non-recoverable negative impact
 - > Can the negative impact of S&T be counter acted by operational exploitation in new and innovative ways?
 - > Operational exploitation will decline overtime, either in relation to new related IFM iterations of new IFMs

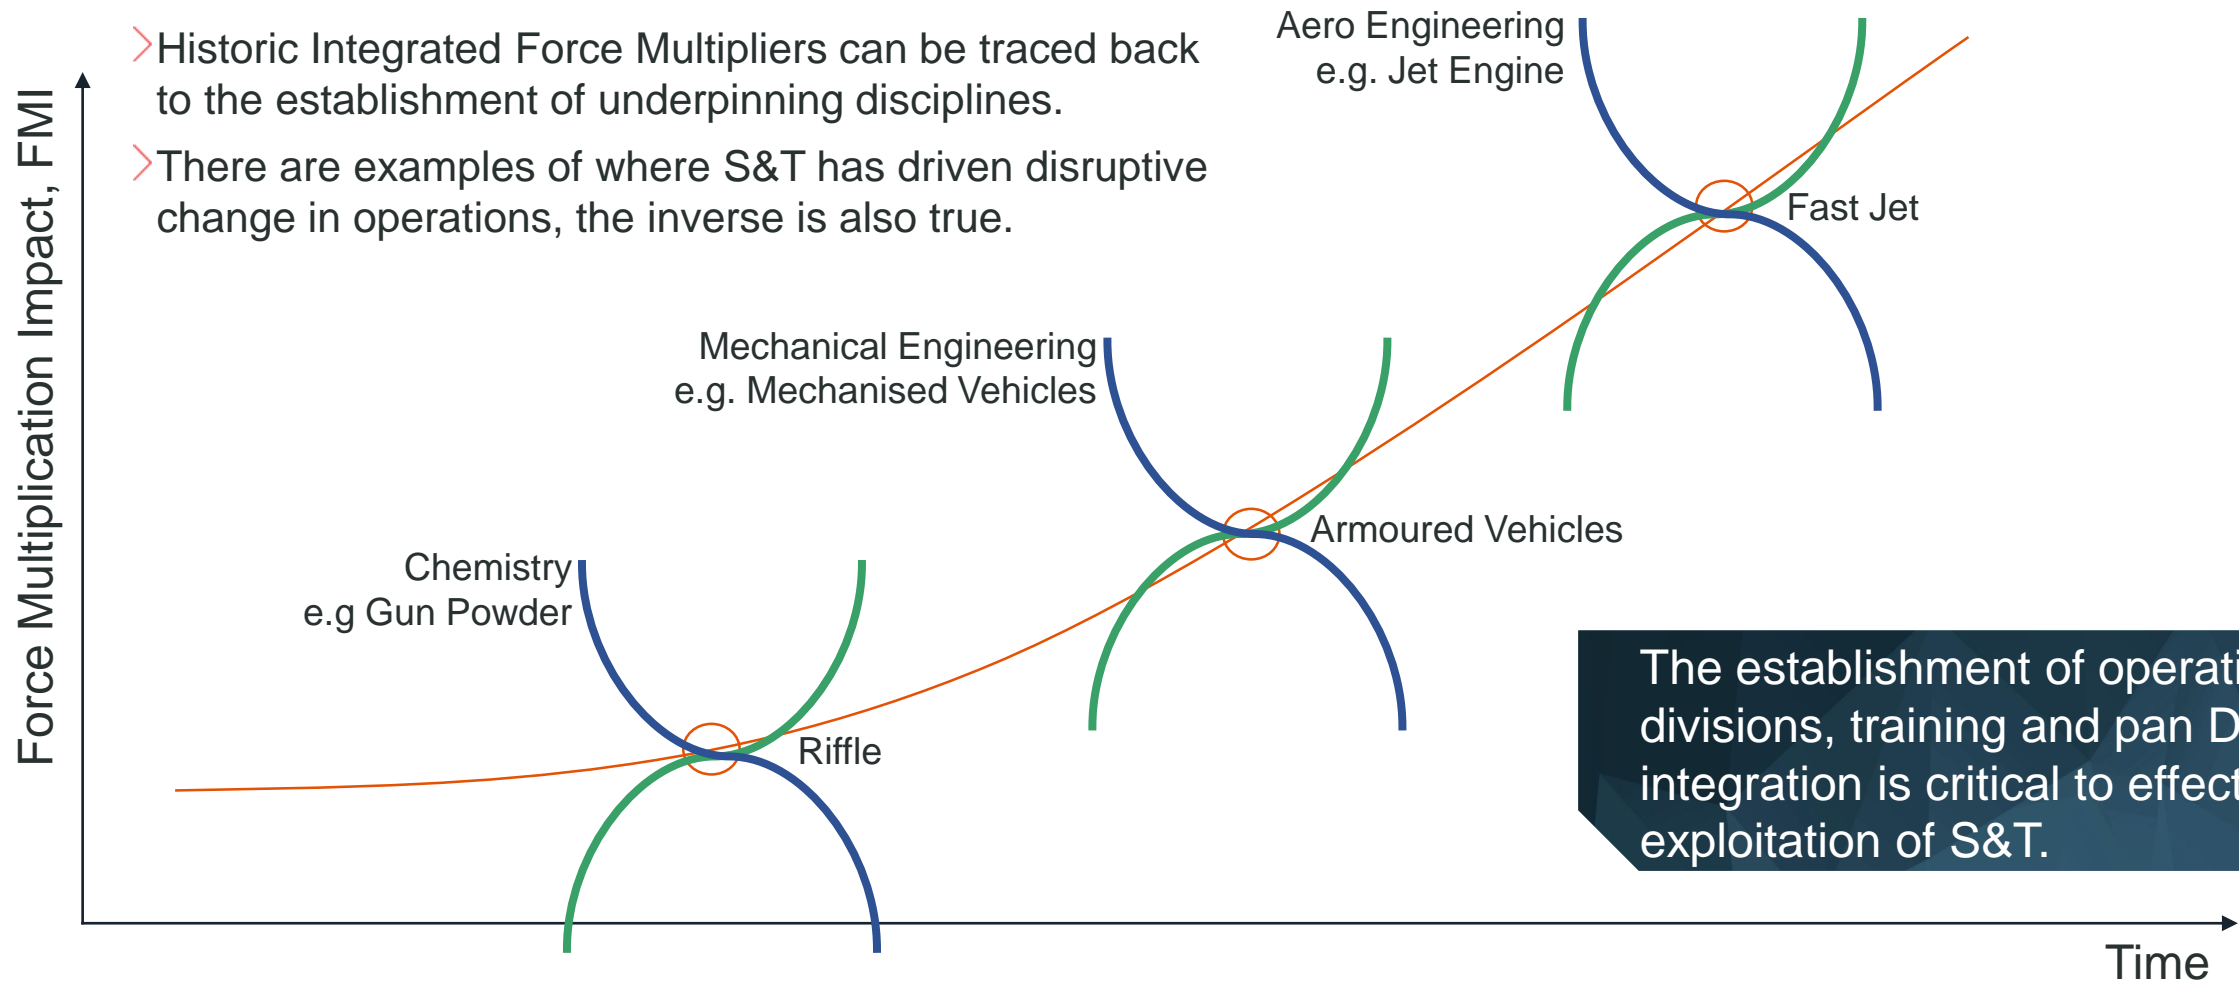

Force Multiplication: Divergence

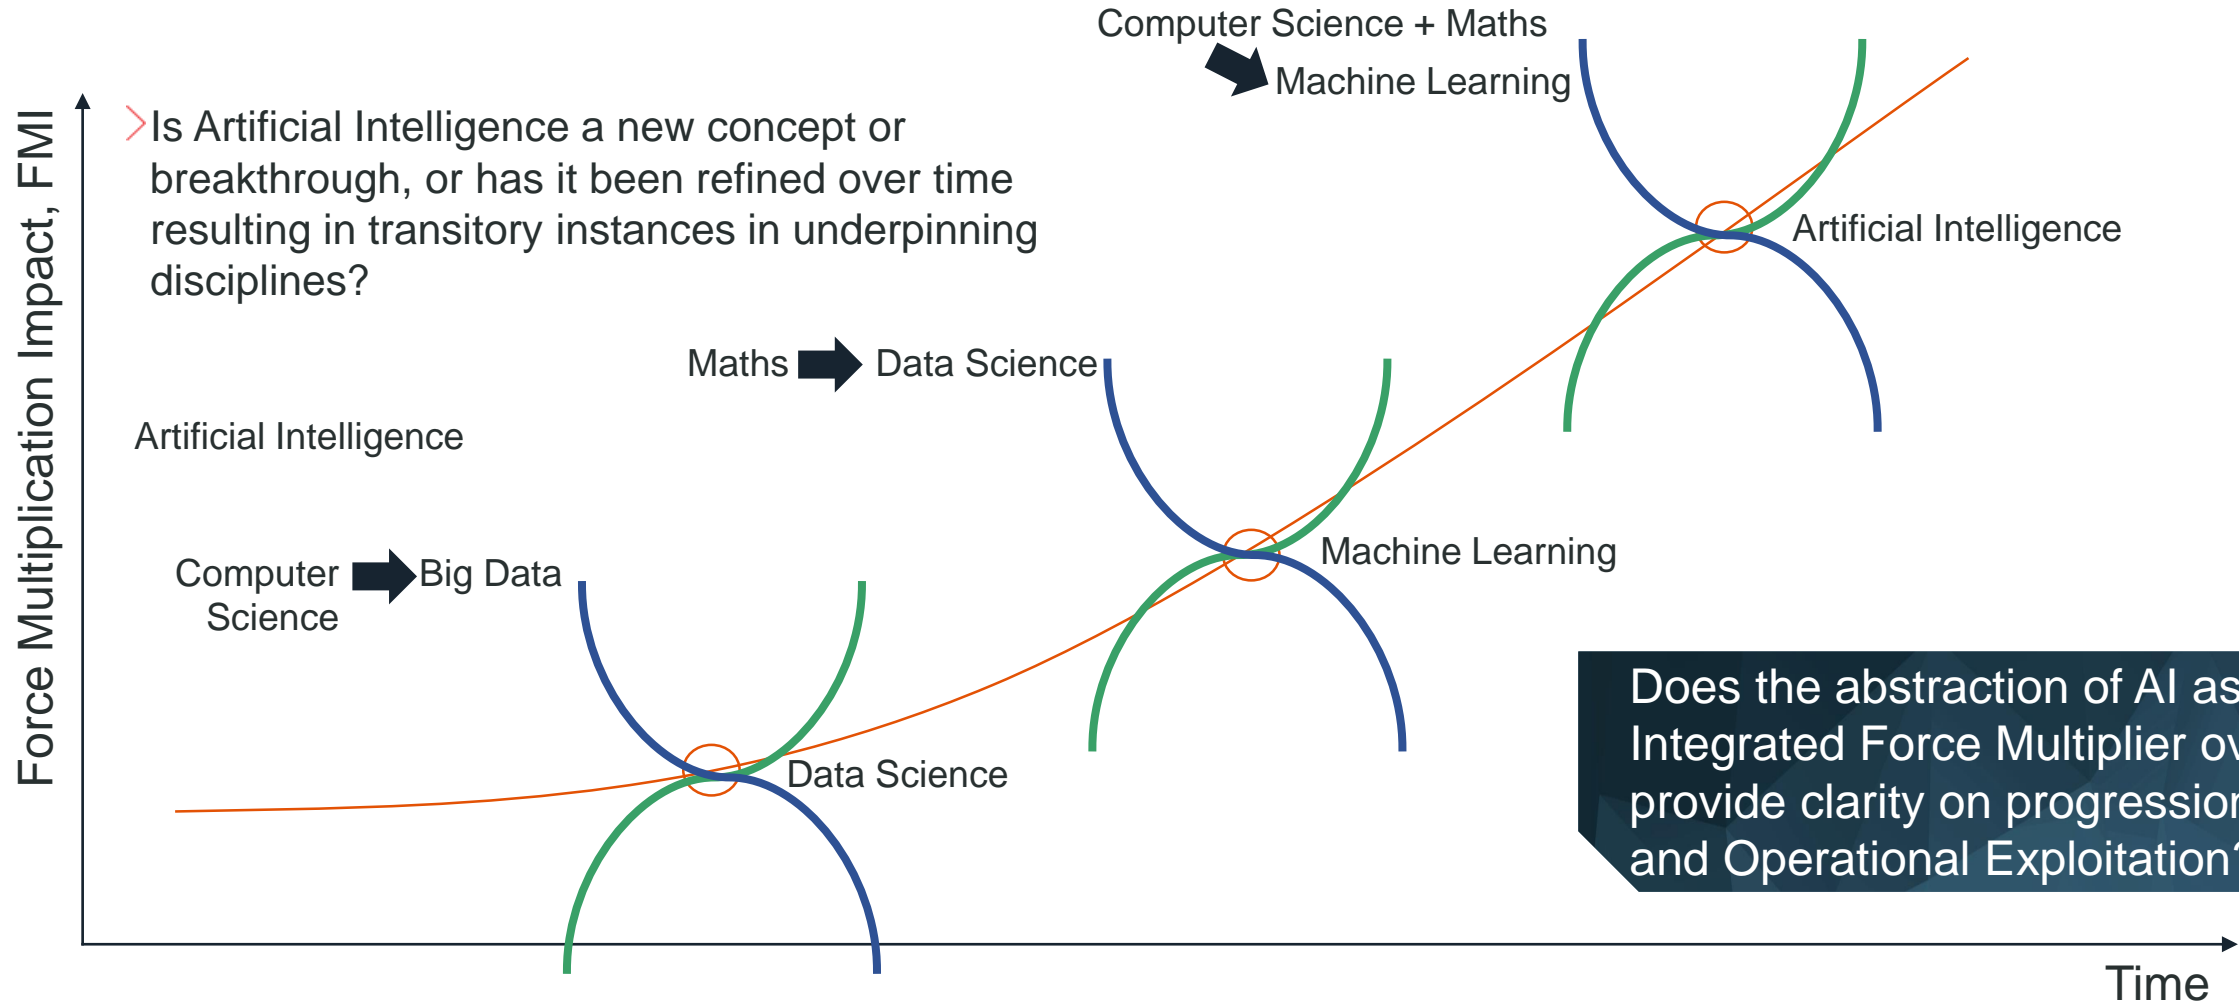

Can the impact of an IFM when in divergence can be viewed as the resultant vector of S&T and operational exploitation?

Force Multiplication: Early IFM

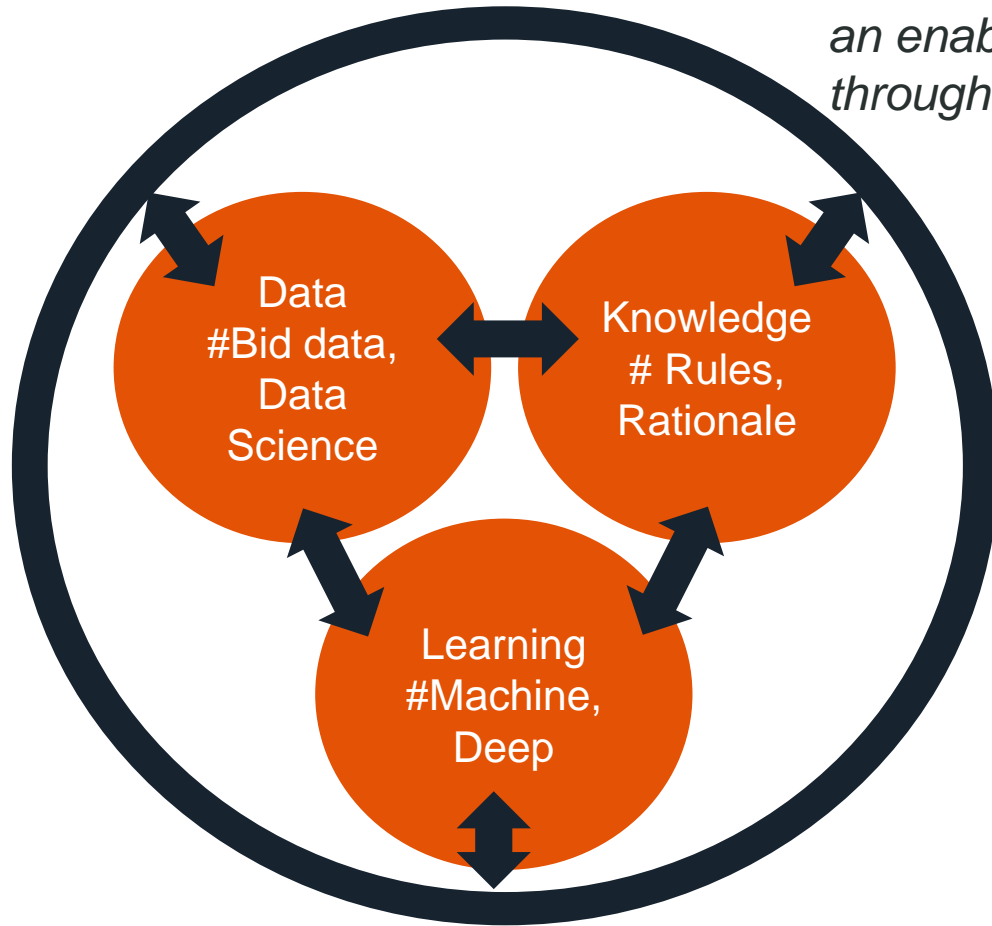

Force Multiplication: Early IFM

Force Multiplication: Artificial Intelligence

Artificial Intelligence, In the context of and Integrated Force Multiplier, AI is an enabling technology that allows effective delegation of intent , achieved through the coherent exploitation of a number of underpinning disciplines.

Super: Perceived as a threat to humanity and capable of complex large scale manipulations, conscious, self preservation, understand and have emotions.

General: Enables the delegation of intent for classes of scenarios and can adapted and learn new approaches for previously unknown scenarios.

Narrow: Enables the delegation of intent for tightly constrained scenarios, different AI implementation per scenario.

Terminology for Artificial Intelligence, Machine Learning and Deep Learning are commonly interchanged, there are multiple competing definitions and taxonomies.

Integrated Force Multipliers

- > Illustration of a general model to understand Integrated Force Multiplication (IFM).
- > Convergence and divergence of Technology and Operational Understanding for IFM.
- > General examples of IFM to convey evolution overtime.
- > Enabling role of Data Science, Machine Learning for AI as an IFM.

Evolving Concepts of Operation

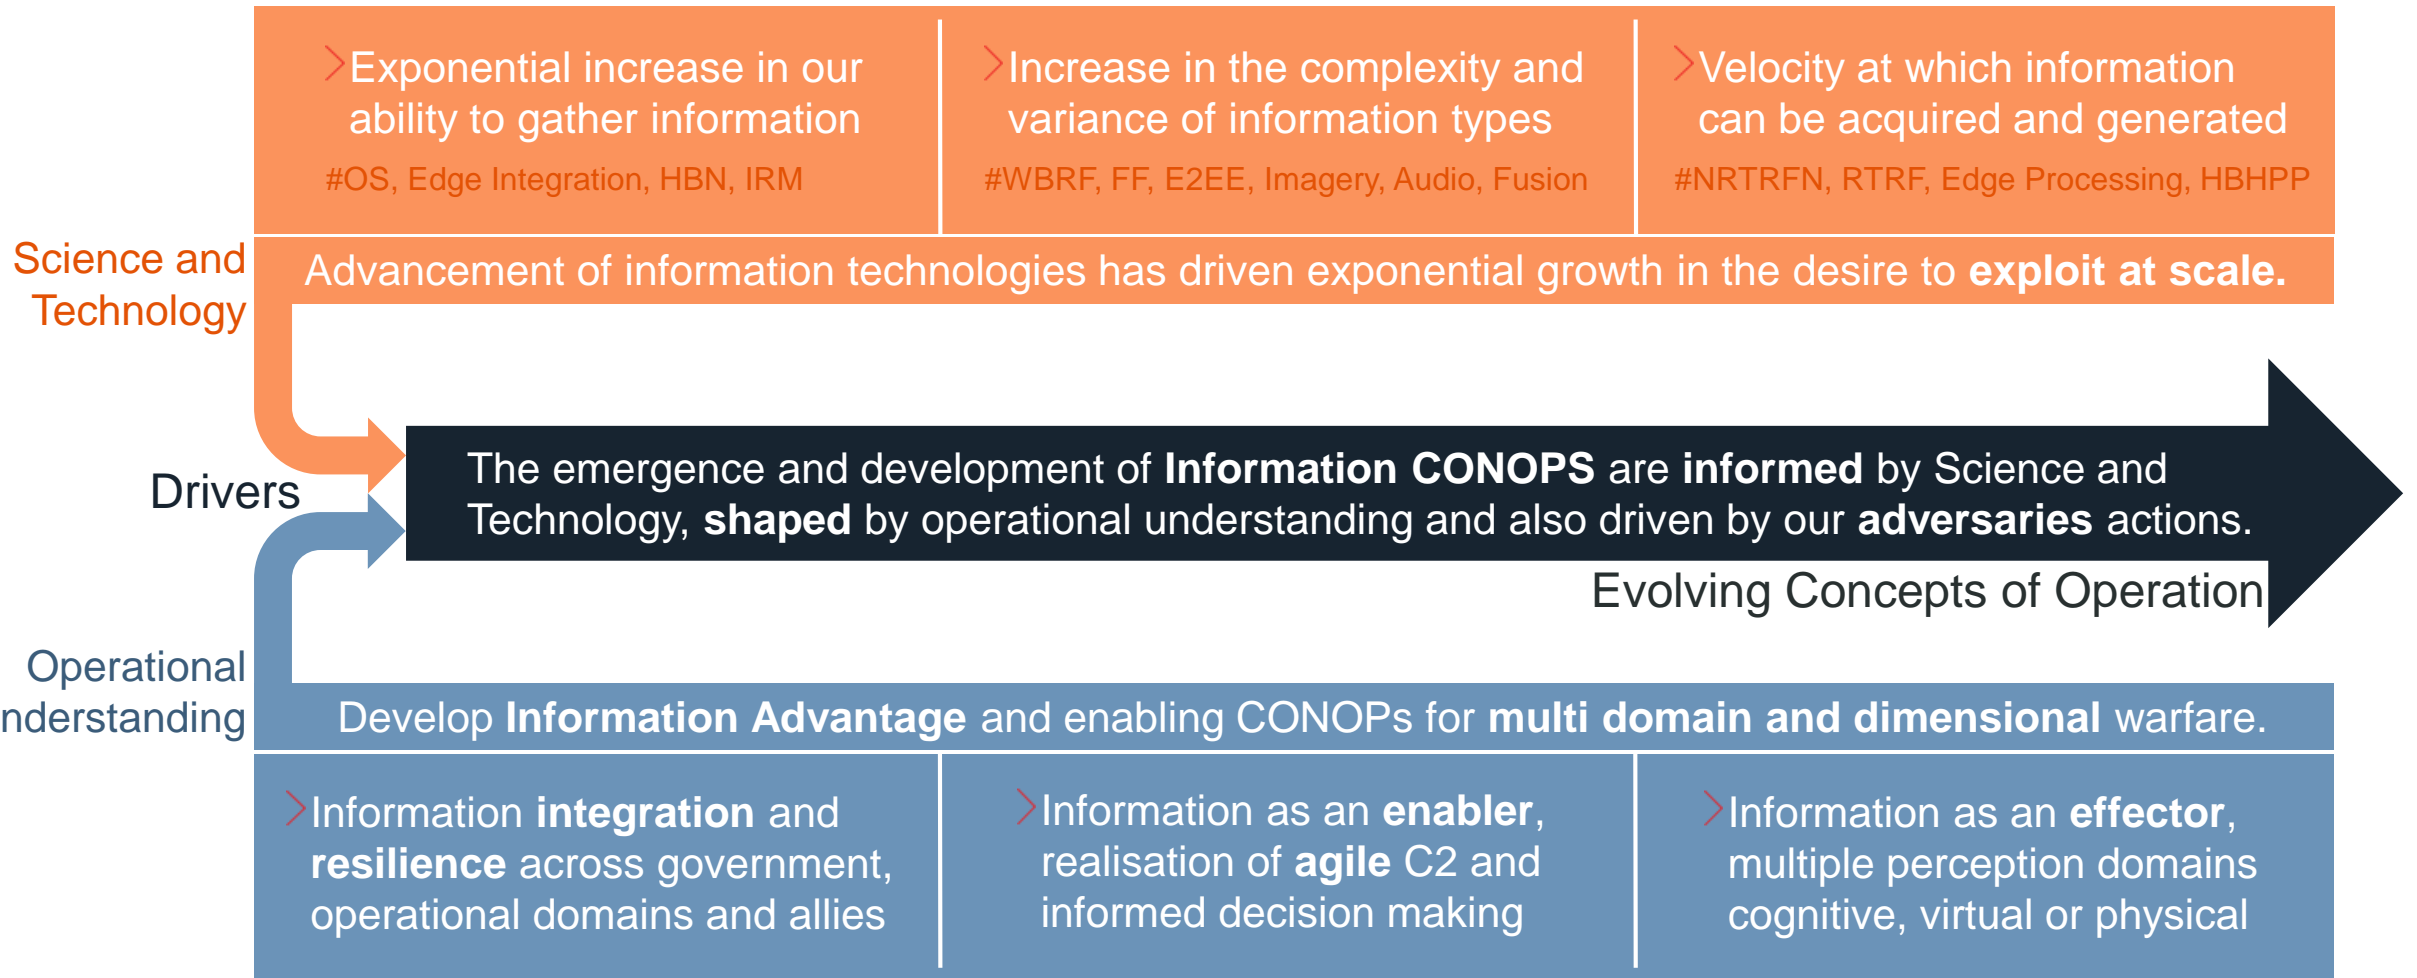

- > Identification of the driving factors behind the evolution of data and information.
- > Assessment of the impact of evolving and dynamic information dependent CONOPs.
- > Key elements of the advancement of information driven CONOPs.
- > Identification of key components and characteristic of information CONOPs

AI Candidate Scenarios

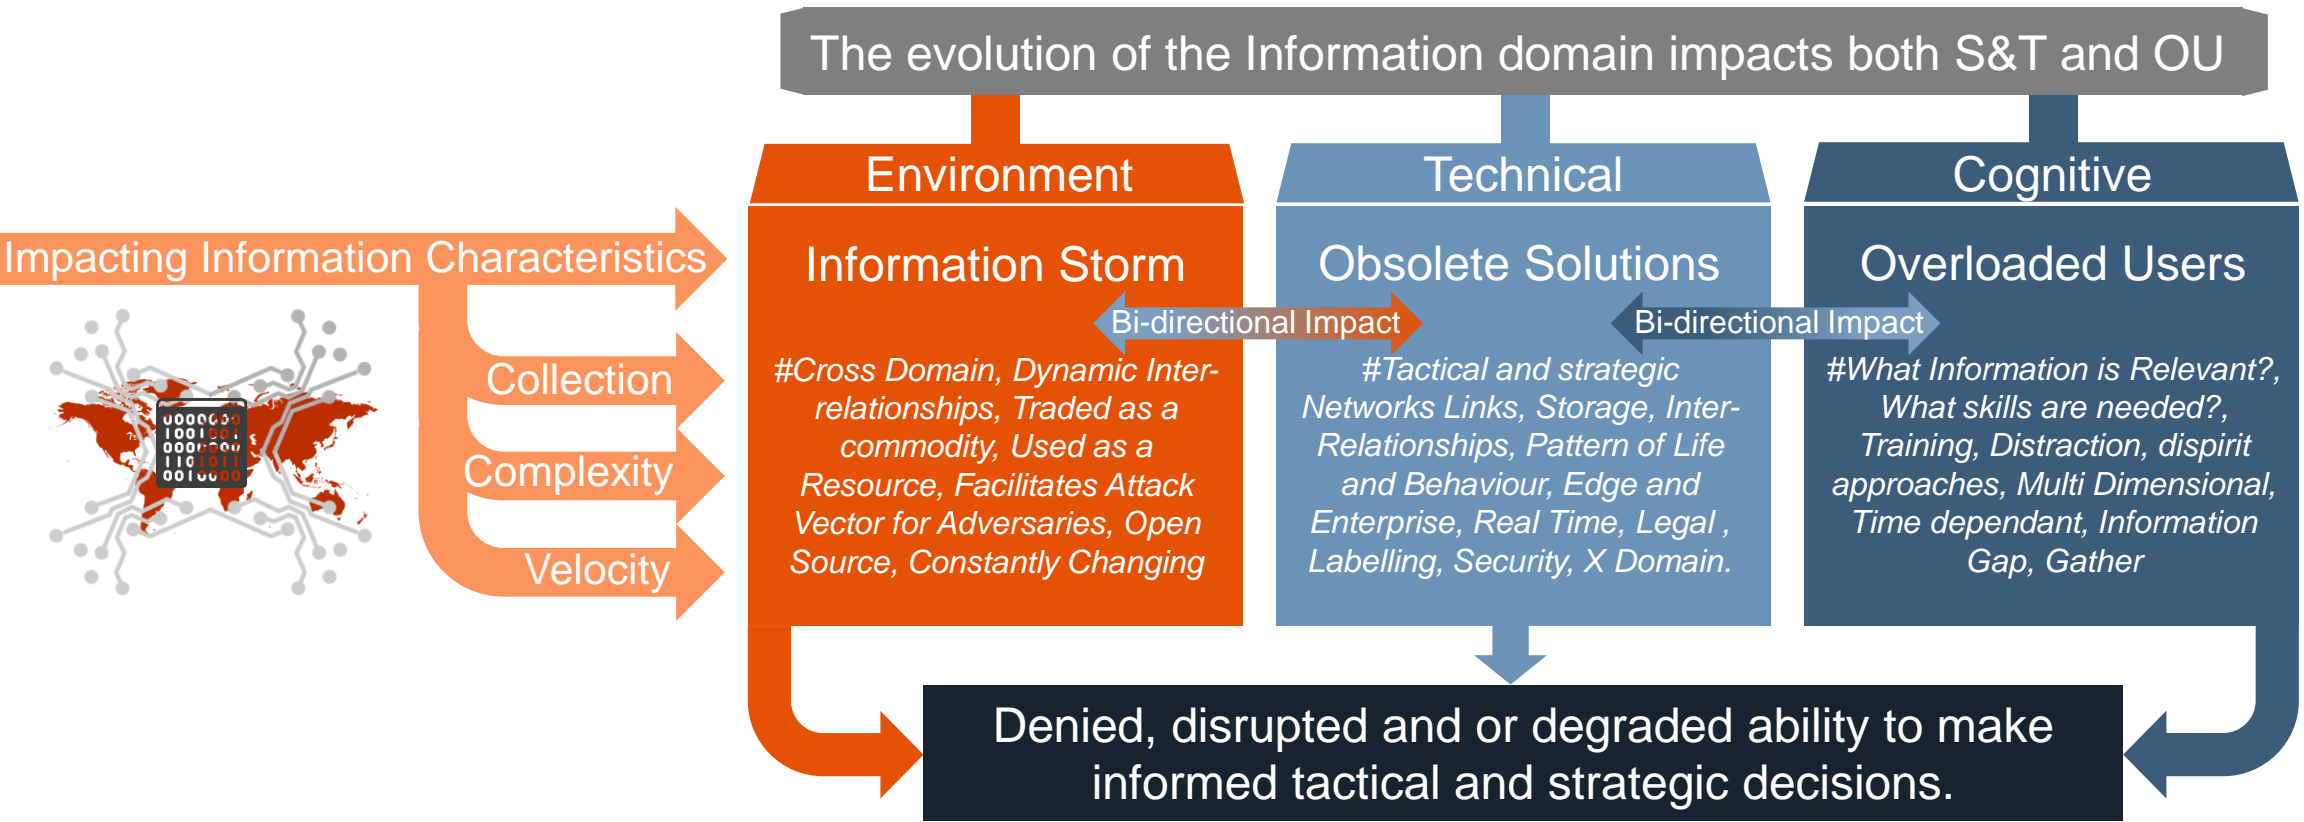

- > Overview of the resulting operational environment established from information CONOPs.
- > Identification of prevalent Edge and Enterprise technologies present in the environment.
- > Discussion of candidate AI IFM scenarios for Edge technologies.
- > Discussion of candidate AI IFM scenarios for Enterprise technologies.

Evolving Concepts of Operation: Drivers

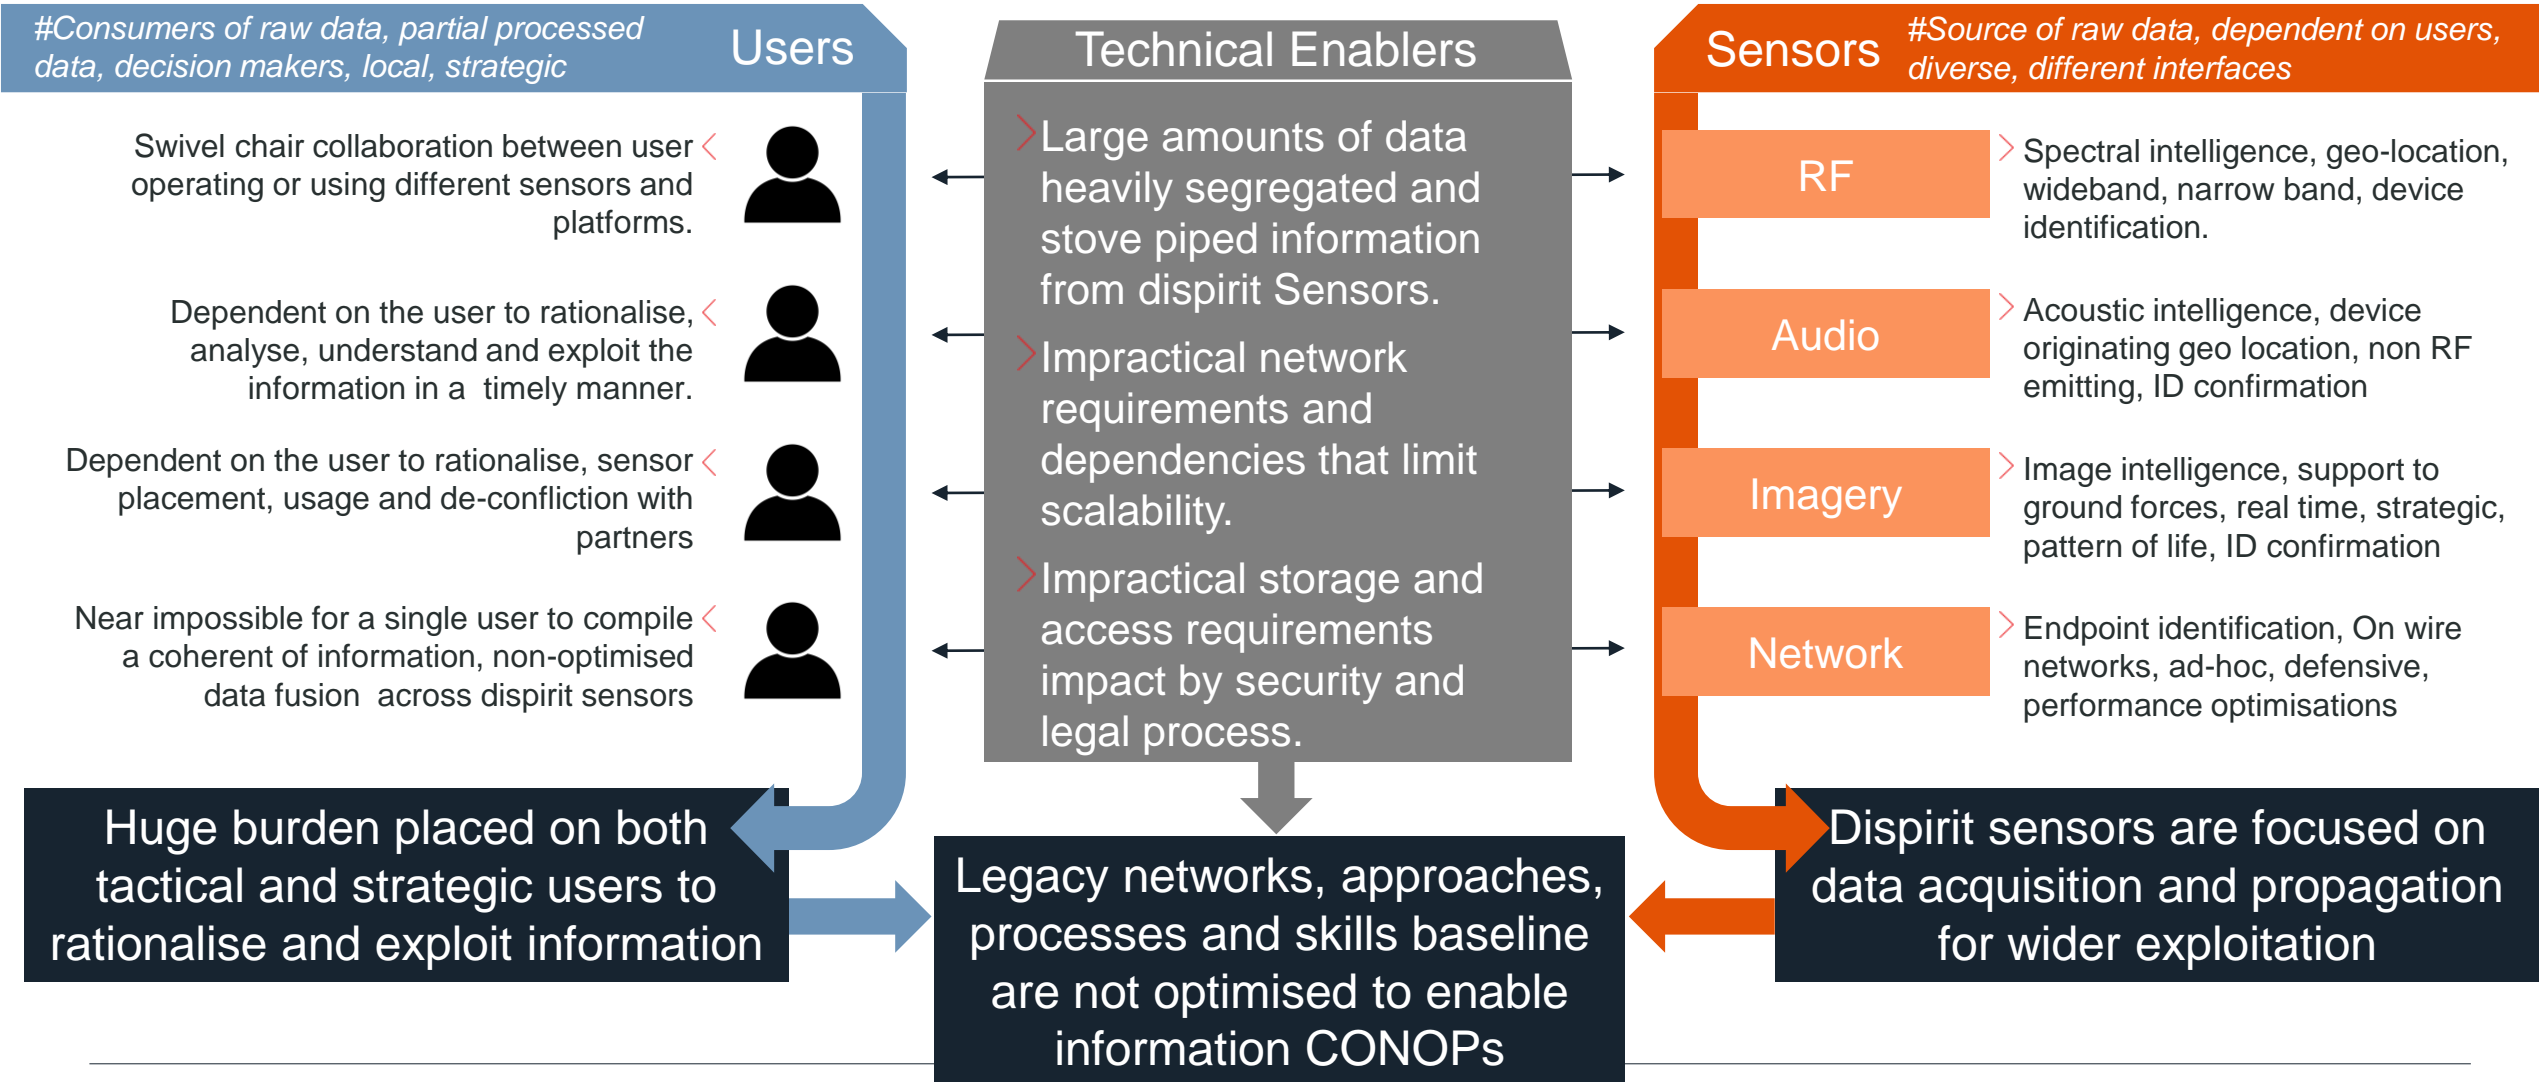

Evolving Concepts of Operation: Impact

Machine Learning on the Battlefield,
by Dr Paul Brittan, Today at 1430-1500, Global Theatre

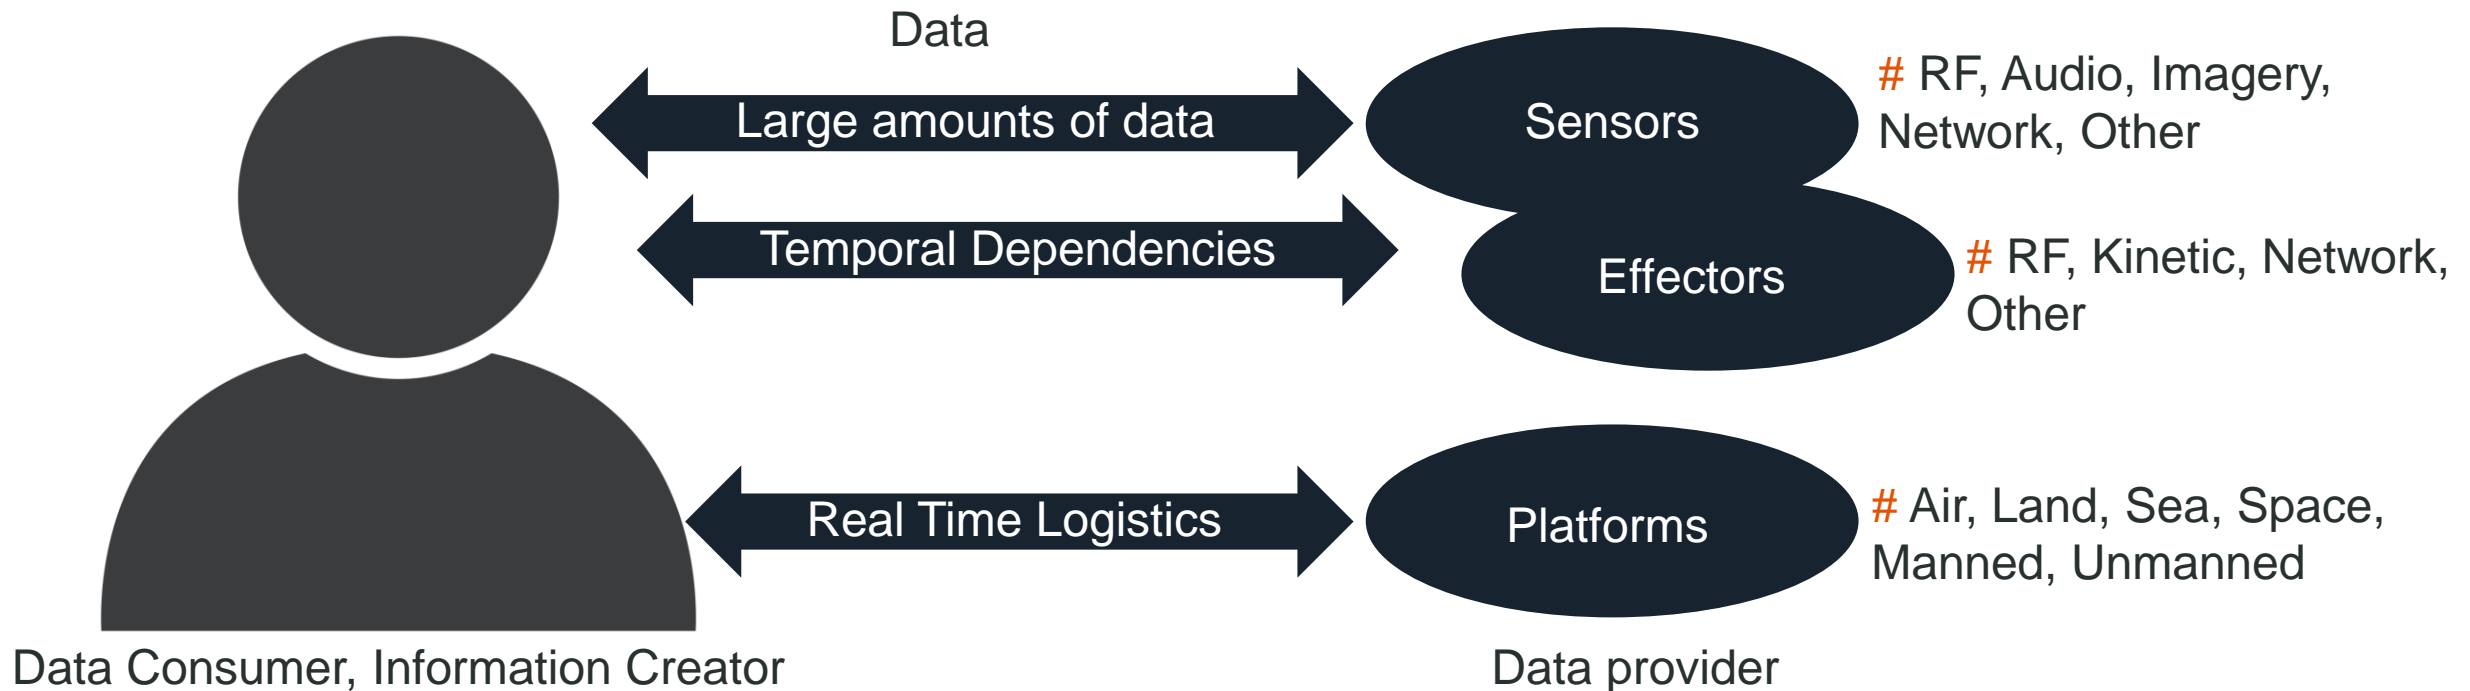

Evolving Concepts of Operation: Advancement

Evolving Concepts of Operation: Advancement

Data driven, Cognitively Intensive, Stove Piped, Barrier to Agility, Impedes Technical Delegation of Intent

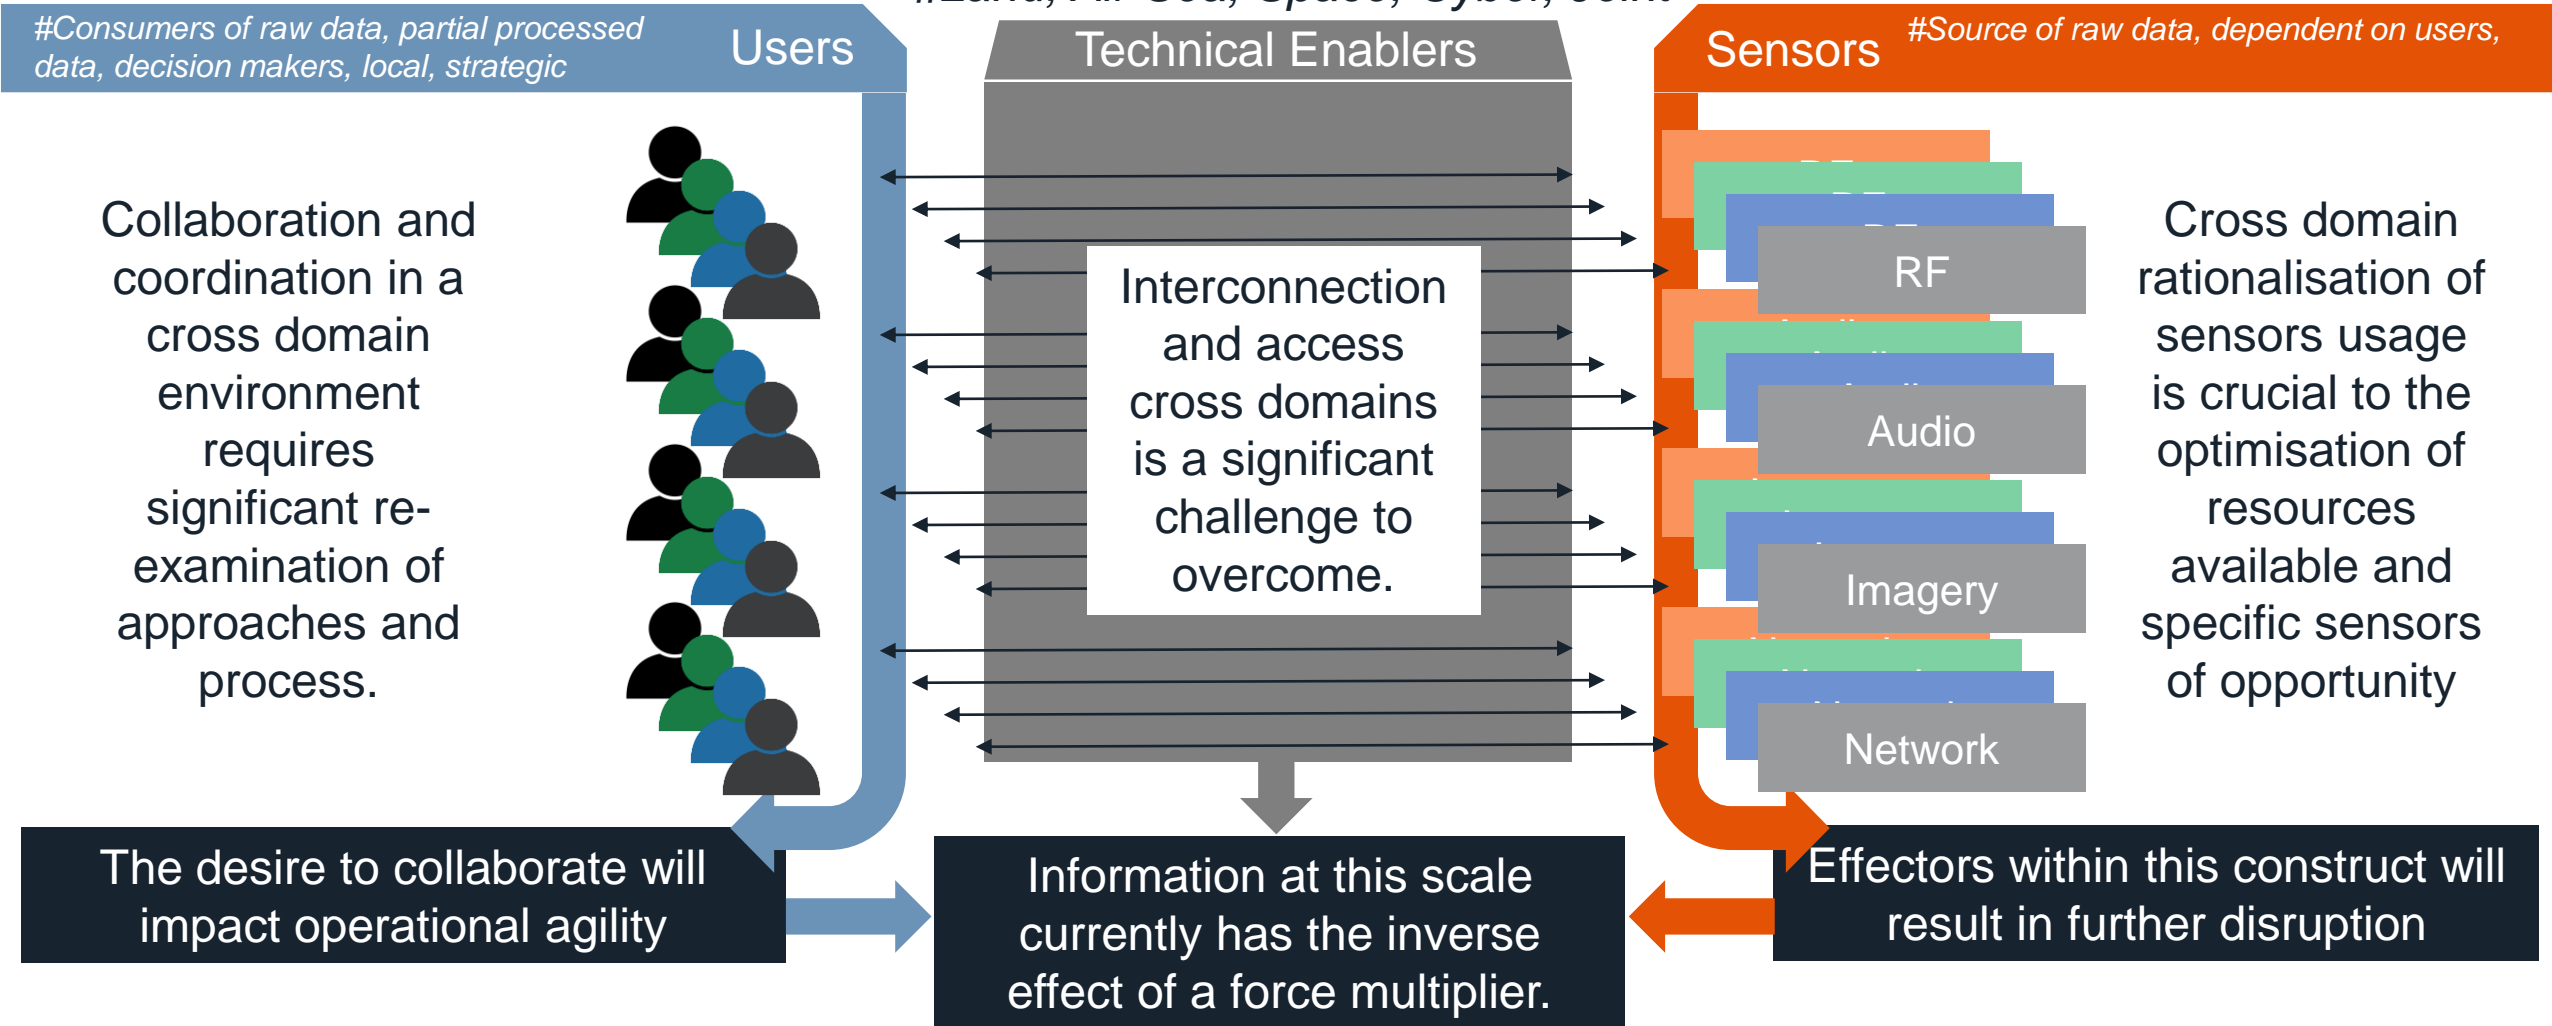

Evolving Concepts of Operation: Advancement

The issues identified amplify when cross domain scenarios are considered.

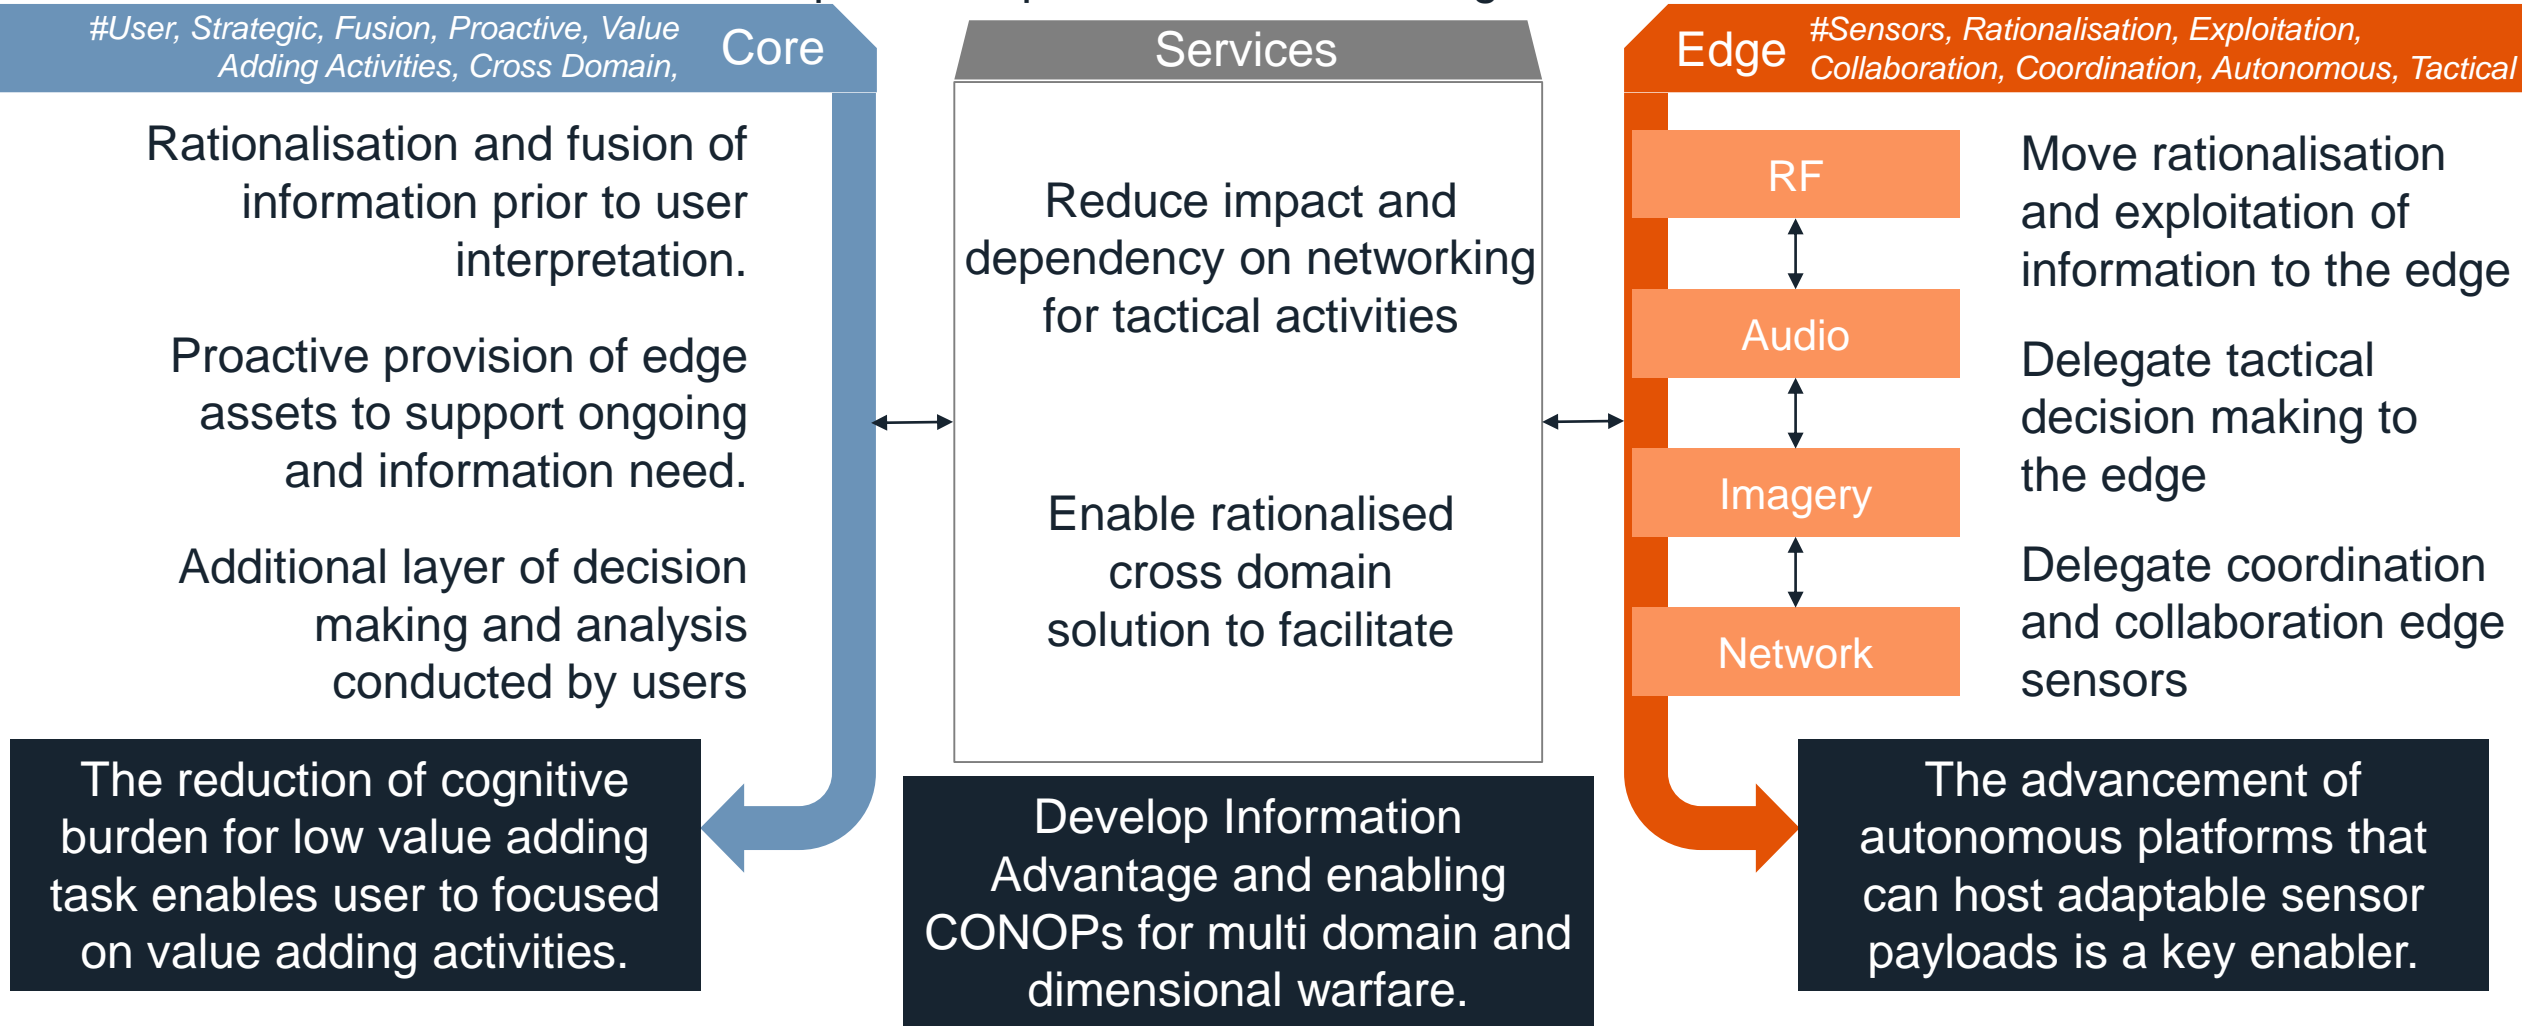

#Land, Air Sea, Space, Cyber, Joint

Evolving Concepts of Operation: Characteristics

Information CONOPs are dependant of the establishment of a coherent enterprise comprised of core and edge elements.

Integrated Force Multipliers

- > Illustration of a general model to understand Integrated Force Multiplication (IFM).
- > Convergence and divergence of Technology and Operational Understanding for IFM.
- > General examples of IFM to convey evolution overtime.
- > Enabling role of Data Science, Machine Learning for AI as an IFM.

Evolving Concepts of Operation

- > Identification of the driving factors behind the evolution of data and information.
- > Assessment of the impact of evolving and dynamic information dependent CONOPs.
- > Key elements of the advancement of information driven CONOPs.
- > Identification of key components and characteristic of information CONOPs

AI Candidate Scenarios

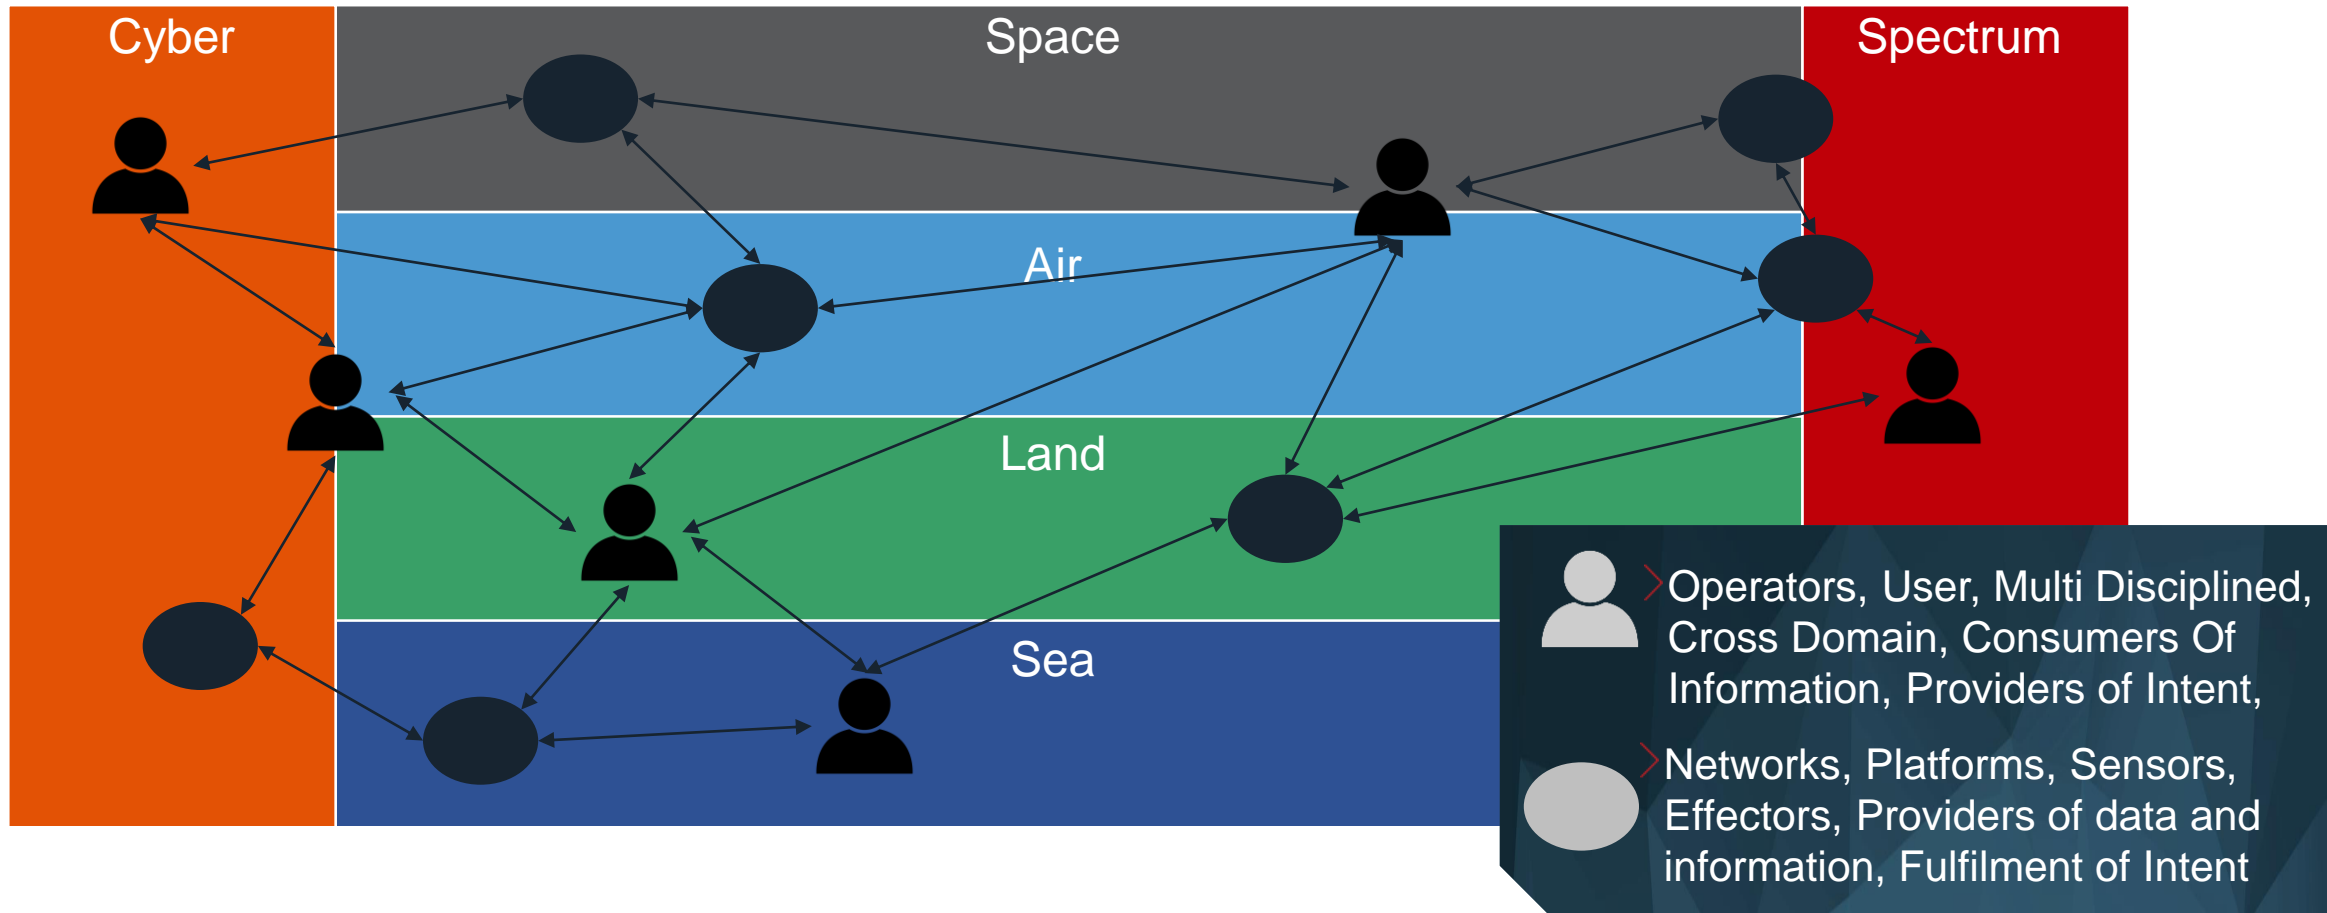

- > Overview of the resulting operational environment established from information CONOPs.
- > Identification of prevalent Edge and Enterprise technologies present in the environment.
- > Discussion of candidate AI IFM scenarios for Edge technologies.
- > Discussion of candidate AI IFM scenarios for Enterprise technologies.

Candidate Scenarios, Operating Environment

#Cross domain, decentralised, delegated intent, reduction in cognitive burden, outcome focused, dynamic, collaborative, coordinated, information focused

Scenario Scope

Find and report locations of device type A in Area of Interest B

#Period of Time, Priority, Accuracy, Assurance, Confidence

Rationalised Operator Interface to the Cross-Domain Enterprise, Single Information Environment

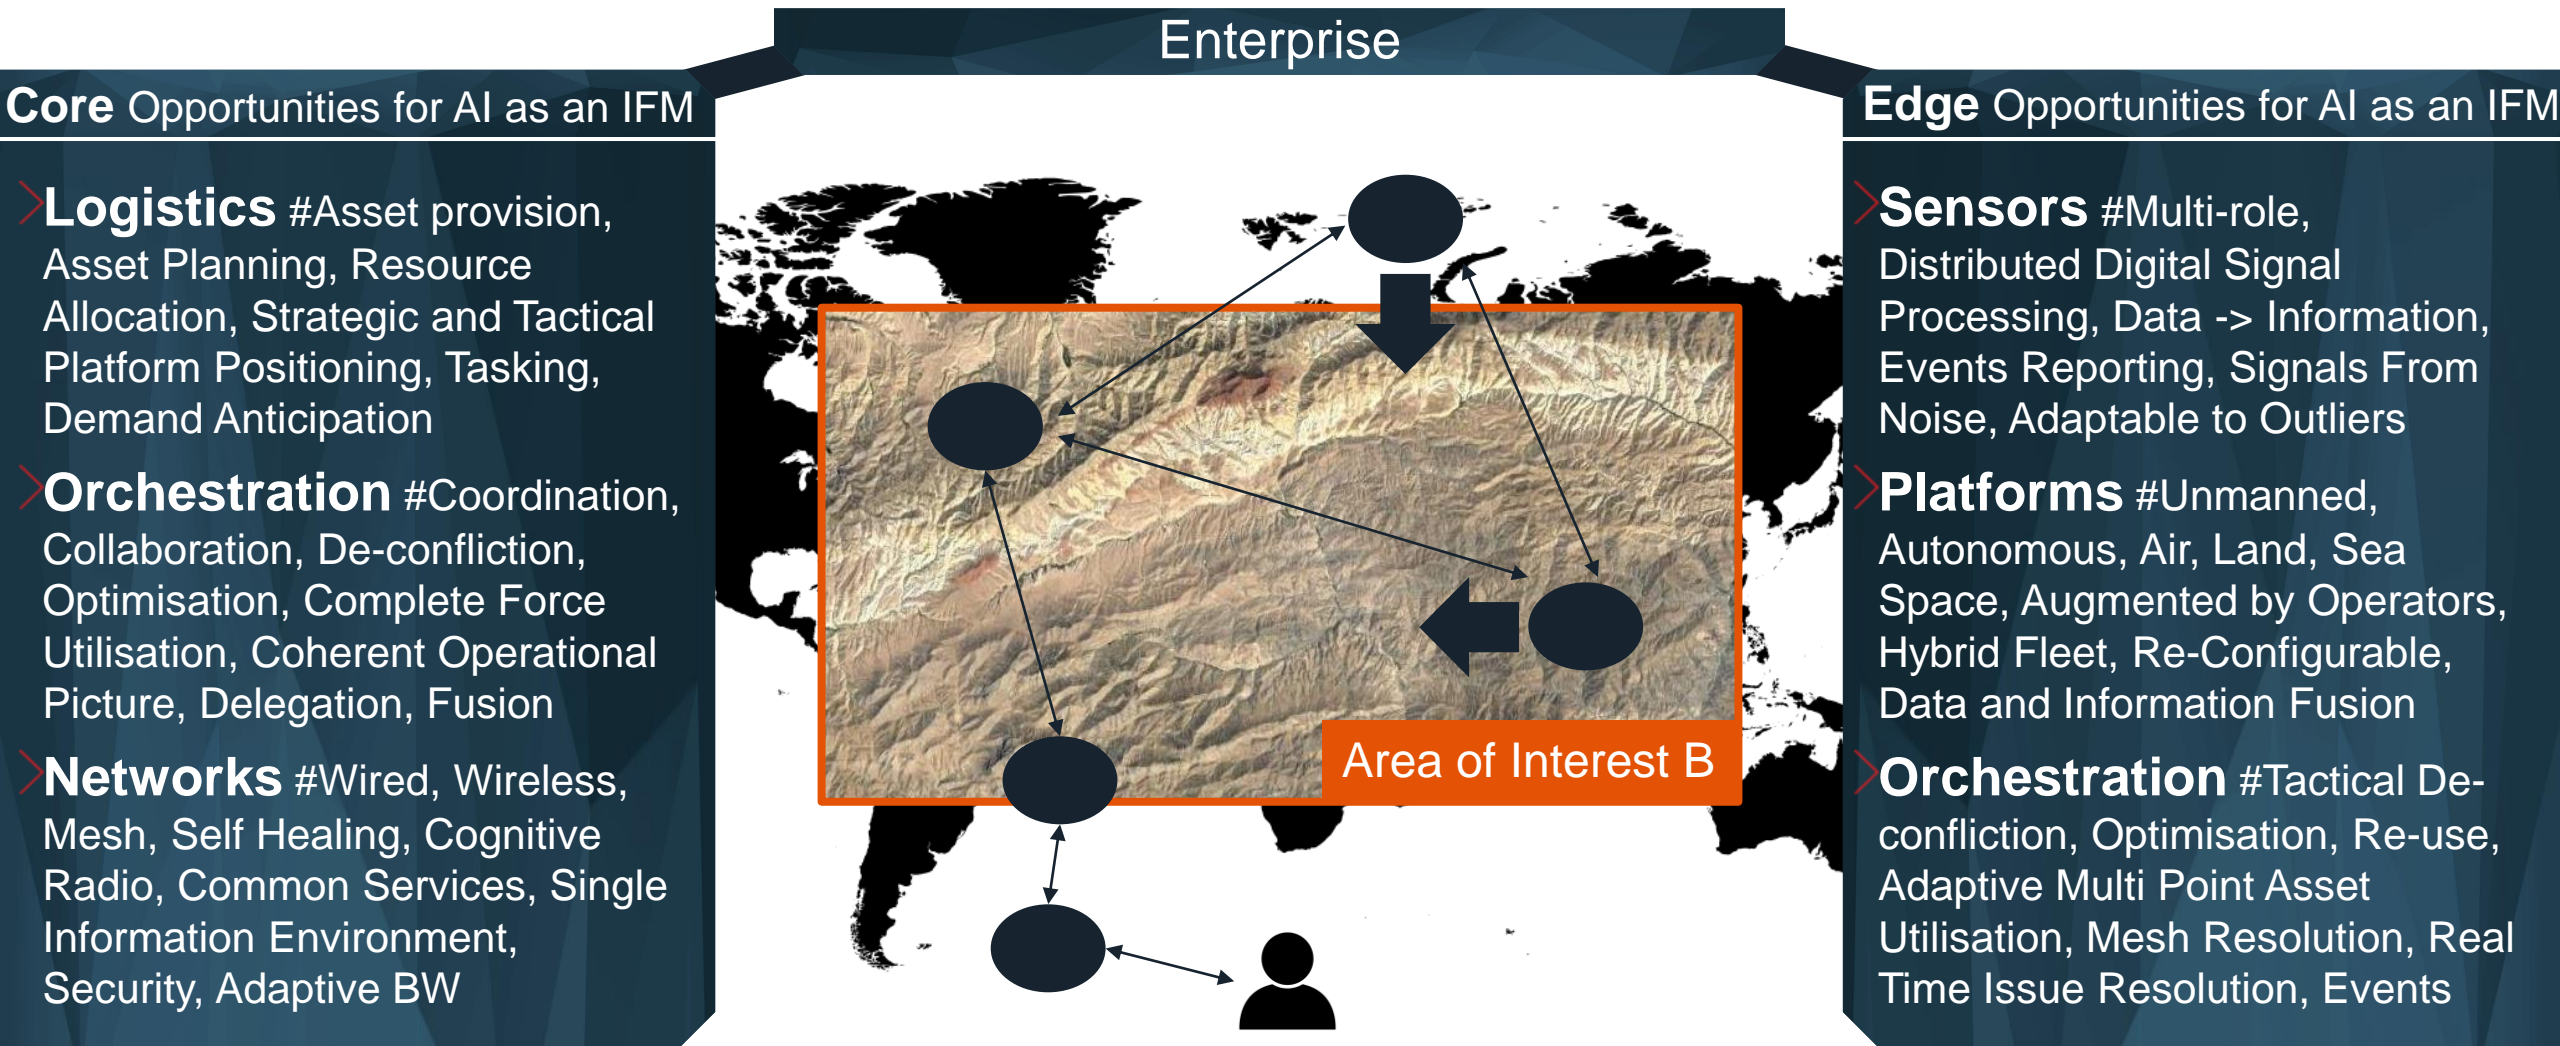

#Information, Outcomes, Delegation of Intent, Reduced Cognitive Burden, Rationalised Skill-base

Opportunities for AI as an IFM

Artificial Intelligence is a key enabler to allow effective delegation of intent to Technology

Summary of Questions

Integrated Force Multipliers

1

> Can the benefits of Artificial Intelligence be truly delivered without convergence with Operational Exploitation?

Evolving Concepts of Operation

2

> Does the advancement of Information Concepts of Operation act as the catalyst for the Operational Exploitation of Artificial Intelligence?

AI Candidate Scenarios

3

> Does our current operating environment prohibit the adoption of Artificial Intelligence or drive the need?
