Great British Manufacturing

mtc

Manufacturing
Technology Centre

IMPROVING PERFORMANCE AND PRODUCTIVITY FOR **DEFENCE** THROUGH ADVANCED MANUFACTURING **TECHNOLOGIES**

BACKGROUND

- Opened in 2011
- Independent RTO
- Secure facilities
- Prove innovative manufacturing ideas
- Manufacturing system solutions
- Training

MTC & HVM CATAPULT

The High Value Manufacturing (HVM) Catapult is the catalyst for the future growth and success of manufacturing in the UK.

We are developing extensive capability in manufacturing technologies and process expertise to grow the contribution of the manufacturing sector to the UK economy.

The MTC will:

- Identify and implement new technologies
- Undertake research and development
- Complete client or collaborative projects
- Increase operational efficiency
- Support the supply chain
- Provide technical training and employee upskilling

INDUSTRY CHALLENGES

You want to make something

at a lower cost
better quality
quicker
in higher volume
you've never made before

You want to assemble something to

minimise reject rate
improve reliability
improve consistency
reduce waste
reduce errors

You want to use data more effectively for

improved design
better quality
efficient logistics
new business models

MANUFACTURING INNOVATION

Component Manufacturing

Additive Manufacturing

Non-Conventional Machining

High Integrity Fabrication

Assembly Systems

Advanced Tooling and Fixturing

Electronics Manufacturing

Intelligent Automation

Data Systems

Design and Simulation

Manufacturing Informatics

Metrology and NDT

ADDITIVE MANUFACTURING IN DEFENCE

Dr. David Brackett

- Technology Manager for the National Centre for Additive Manufacturing
- Extensive knowledge of how AM can be used to create parts with improved performance

1. Intro to AM
2. Opportunities for defence sector
3. Capabilities of NCAM

WHAT IS AM?

ADDITIVE MANUFACTURING

Source: Shapeways Magazine

BENEFITS - PRODUCT FUNCTION

Design freedom

Material freedom

Mass customisation

Reduced part count

BENEFITS - PRODUCT SUPPLY

Waste reduction

Reduced inventory

Lead time reduction

Decreased cost

Source: 3D Hubs

KEY APPLICATION SECTORS

- Aerospace
- Defence
- Space
- Medical /dental implants & devices
- Power generation equipment
- Motorsport

- End use components
- Prototypes
- Manufacturing aids (jigs / fixtures)
- Tooling

Alenia Space*

OPPORTUNITIES

OPPORTUNITIES

“It is my strong belief that 3D printing and advanced manufacturing are breakthrough technologies for our maintenance and logistics functions in the future.”

Vice Admiral Philip Cullom, deputy chief of naval operations for fleet readiness and logistics.

Defence requirements:

- High performance components
- Fast response / Agility
- Cope with a disrupted supply chain
- Cost not necessarily main driver

https://www2.deloitte.com/content/dam/insights/us/articles/additive-manufacturing-defense-3d-printing/DUP_1064-3D-Opportunity-DoD_MASTER1.pdf

WHY MIGHT AM BE USEFUL?

Improve the product itself and the product development process

PROTOTYPING

Manufacture of large scale test models for product development. Reduced cost of and more robust prototypes compared to traditionally made. (MSubs)

3D printed skulls created to test helmets (US Army)

Prototype of grenade launcher (50 parts) made out of SS, Al. Ammunition also printed. Similar performance to serial model.

Example taken from EDA doc.

CHALLENGES WITH AM

- Low productivity of systems
- High cost of parts
- New – lack of understanding
- Rapidly developing
- Limited materials
- “just click print”...?
- Surface finish
- Process variability
- Inspection and testing
- Unfamiliar feedstock and material properties
- Unfamiliar opportunities for redesign
- Lack of supply chain

**NCAM helps companies
through entire AM journey**

ADOPTION TRACKER BETA

Welcome to the Adoption Tracker app (BETA)

The app has been designed to help you orient yourself on metal additive manufacturing and to link you to the most relevant resources for your stage of adoption. The content currently focuses on metal powder bed, but some topics are relevant for other processes or materials. Under each topic, you will find steps, milestones and links to resources.

We value your feedback and suggestions. Please e-mail it to drama@nmc.org.
