About Us

Ecolog is a global provider of integrated services and sustainable solutions. We operate across multiple sectors and environments, including some of the world’s most remote and challenging locations.

Established over two decades ago, Ecolog started providing support for peacekeeping missions in the Balkans and began operating internationally in 2002. Over the years, we extended our service offering to meet the evolving needs of our clients and expanded our operations to support them every day and everywhere.

Today, with a footprint in over 40 countries, our service portfolio includes life support, supply chain management, construction, engineering, healthcare and environmental services tailored to the needs of our clients and designed to fuel their growth and productivity.

Driven by the passion to assist people in harsh conditions, our extensive experience in providing urgent response solutions, managing crisis logistics, and mission and life-critical operations enabled us to become a trusted partner to our clients worldwide.

“ Enabling our clients to focus on their operation by taking care of their needs ”

Supply Chain Management

Our robust state-of-the-art supply chain management system bridges the gap from the source to the client’s site, including last mile distribution.

We provide a complete range, including essentials such as water, food, fuel and consumables. In addition, we offer warehousing & distribution, material handling and fleet services.

Supply Chain Services include:

- Warehousing and Distribution
- Material Handling Services and Fleet Management
- Water and Food Supply
- Multi-Modal Transport
- Fuel and Energy Supply

Warehousing and Distribution

Today’s warehousing services go beyond storing items. We provide clients with comprehensive warehousing management systems that manage the flow of goods, components and information to optimise productivity across diverse industries. We have adopted Lean Logistics Principles that are the latest in management techniques. These have become a part of our company culture no matter where we operate and this has translated into improved delivery performance, lower operating costs and improved processes.

Material Handling Services and Fleet Management

We provide vehicle and material handling equipment operations, maintenance and rental services. As part of our fleet management and operation services, we provide operators and perform full maintenance, as well as accident and minor repairs.

Our fleet management department manages all company transportation fleet of vehicle including MHE and construction equipment through operations and maintenance , servicing, repairs, provision of parts and consumable, vehicle tracking and replacement. We provide all types of heavy equipment for short-term rentals or long-term leases, with or without operators.

Water Supply

The quality of drinking-water is a powerful environmental determinant of health. The issue of access to potable water is essential, particularly when in areas where water is known to be unsafe.

Our water supply operations cover the entire water cycle. We provide our clients with potable and bottled water that exceeds safety and quality standards. We also operate quality systems for drinking water and provide scheduled testing in our state-of-the-art laboratories.

Our water supply services include transportation and waste-water treatment to ensure high standards of hygiene, freshness and purity.

Food Supply

Equipped with multi-modal capabilities, our supply chain management system ensures reliable food supplies to all locations as required by our clients. Our services provide agricultural products, both fresh produce and processed products.

We source from approved international suppliers and utilize our large fleet of transport trucks, including vehicles with temperature-controlled storage, to deliver even in the most challenging terrain. We also partner with our established international logistics partners to provide air freight services, ship and barge transport and rail transport as required.

Multi-Modal Transport

In today’s competitive environment, clients need a supply chain partner that can deliver through air, sea, land and rail transportation. We work with clients to optimise their operations with our multi-modal services with a single point of contact under a single contract, thereby increasing efficiency and reducing costs.

Our multi-modal solutions deliver flexibility and reliable lead times with significantly reduced carbon footprints. These services are complemented by the full suite of services including customs house brokerage, cross-docking, consolidation and reverse logistics.

Fuel and Energy Supply

With many of our clients operating highly sophisticated equipment in challenging locations, we understand the importance of reliability and quality in the provision of fuel services. Sourcing, storage and delivery are included in our portfolio of fuel supply services.

We operate under the strictest standards and conduct tests at all stages of the supply cycle, including our remote testing sites providing quality certificates to our clients and delivering the assurances they need to be confident that their fuel supplies are the best quality.

We can deliver any volume of high-quality fuel and natural gas without delay. To complete the circle, we established our own fuel storage facilities to respond to any volume demand and to ensure our client's mobility and energy supply remain uninterrupted.

Support Services

Over the past two decades, we have been providing best-in-class catering, facility management, cleaning, and laundry services, even in some of the most remote camp sites and locations.

Support Services include:

- Catering and Food Services
- Hard and Soft Facility Management
- Laundry
- Man-Power Provision
- Cleaning
- Pest Control

Catering and Food Services

The trademark of our catering and food services is a successful combination of highly experienced culinary and logistics experts, the best quality food and materials, meticulous planning, state-of-the-art infrastructure, and cutting-edge systems, delivered to some of the most remote environments worldwide.

Our services are tailor-made to your specific requirements and designed to enhance the morale and well-being of your personnel by improving their standard of living through quality dining. We also install, operate and maintain modern and capable kitchens and dining facilities.

Hard and Soft Facility Management

Ecolog is an expert implementer of integrated facility management services and technical Operations & Maintenance. Our comprehensive preventative and reactive maintenance programs are designed to protect and upkeep your capital investments.

A dedicated team of certified electricians, plumbers and refurbishment specialists perform the required daily activities to ensure the built environment is well maintained to operate as intended at peak efficiency and meet long-term comfort and safety standards.

Our broad spectrum of executed O&M services includes regular maintenance, repair and routine operational service required to keep all aspects of the facility functional and prepared to sustain the proper utility of equipment.

To keep the built environments contained and organized, our knowledgeable Operations and Maintenance personnel continuously provide high quality maintenance services that fit the complexity and variety of facilities. We plan, conduct and follow up all the organization needed to maintain all systems and equipment properly to provide optimal living conditions.

Cleaning Services

Over the past two decades, Ecolog has built and strengthened its reputation as a leading global provider of integrated support services. By providing our clients with unparalleled services and solutions, we enable them to focus on their operations as we take care of their needs. As a key part of our Support Services portfolio, our cleaning services are tailored to suit the requirements of our clients. Our solutions are designed to be thorough, reliable and efficient.

We service residential and commercial properties located in rural areas across the globe. Our vast experience, combined with our state-of-the-art equipment, environmentally preferred products and unique cleaning processes, provides clients with premium quality cleaning services.

Laundry Services

We provide a wide range of laundry services to commercial customers, international government and non-governmental organizations around the world. Our reputation for delivering best-in-class laundry services is based on extensive experience, high-tech laundromats and laundry-related equipment and the best quality eco-friendly detergent usage. We also operate and maintain an automated tracking, reporting and validation system.

As part of our commitment to provide best-in-class services, especially in remote locations, our laundry capabilities offer clients the highest quality washing and drying experience in a reliable, efficient and timely manner. We are heavily focused on customer satisfaction and continue to expand our capability to meet their unique needs and expectations.

Environmental Services

Ecolog is a world-class provider of comprehensive trash removal, recycling and environmentally safe waste management solutions.

We provide an extensive range of custom-designed and sustainable environmental remediation service solutions, seeking to eliminate environmental health risks and enable cleaner and safer environments for the communities we serve.

We create better living environments.

Environmental Services include:

- Water Provision and Purification
- Waste Water Services
- Solid Waste Management
- Hazardous Waste Management
- Municipal Environmental Services

Water Provision and Purification

Since our water supply operations cover the entire water cycle, we understand that the provision of water is essential, especially in remote areas of operation.

Our water treatment operations and management solutions include well management and water treatment through various processes. We provide water delivery via tanker trucks on schedule or on demand. This includes the provision of potable and non-potable water as required.

Our water treatment systems are designed based on international standards and mandated quality and health parameters established by the USEPA, EU and WHO to meet or exceed client requirements. We develop and implement a water quality assurance program and provide ongoing information in sufficient detail to identify trends, and provide comprehensive guidance on the management of all water sources.

Waste Water Services

Ecolog ensures that disposal and wastewater are managed efficiently and safely to protect the communities' environmental health. Conscious of our environmental and social responsibilities, we provide professional sewage treatment, including removing contaminants from grey and black water. Our core objective is to afford high-quality and environmentally safe water employing progressive technology and regularly scheduled control.

Ecolog’s approach is simple. By providing quality waste water treatment plant operations, and utilizing our staff of dedicated wastewater professionals, we allow our clients the freedom to focus on their core tasks.

Solid Waste Management

We provide collection, transport, treatment and disposal of waste for our clients. We also monitor and regulate the waste management process. All aspects required to manage waste from inception to final disposal are handled by our teams.

Using an integrated resource management approach we are able to offer comprehensive waste management solutions to allow companies to oversee the disposal of their waste without having to manage the legal obligations and logistics. These services include general waste collection, food waste collection, unplanned waste removal and even bin cleaning services.

We also operate facilities for the collection, recycling and disposal of waste, including a network of waste transfer and recycling centers and a regional network of landfill sites.

Hazardous Waste Management

We construct, install and operate hazardous-waste management facilities that ensure all types of hazardous waste produced by our clients are handled, stored and treated in accordance with international standards. Our hazardous-waste storage facilities are designed, constructed, maintained and operated to minimize the possibility of a fire, explosion or any unplanned release of hazardous waste constituents to air, soil, groundwater or surface water.

We create customized solutions to deal with different hazardous waste types. Our hazardous waste management experts can effectively manage:

- Emergency Spill Response
- Industrial Cleaning
- Site Clearance
- Spill Control
- Waste Categorisation and Analysis

Engineering and Construction

From project planning to final handover, no project is too remote or complex. Our team of in-house engineering and construction experts develop comprehensive solutions based on your specifications.

We design and build using the highest standards to ensure your facility operates sustainably and efficiently.

Engineering and Construction Services include:

- Engineering and Design
- Construction
- Prefabricated Facilities
- Build/Own/Operate or B/O/O/Transfer
- Project Management
- Major infrastructure

Engineering and Design

Our engineering team has considerable experience and a proven track record in the construction of various types of facilities in underdeveloped countries, as well as developed countries and urban areas. We provide engineering and construction services for temporary and permanent facilities, specifically for industrial infrastructures in remote areas. We also provide temporary camp options that include tents, containerized accommodations, and pre-fab constructions.

We build any required permanent accommodation facilities – varying from medical centers, administration buildings, heliports, parking structures, workshops, warehouses, and kitchen and dining facilities.

To support the operations of these facilities, we also design and construct major infrastructures such as roads, plants for power generation, water purification, waste handling and hazmat treatment.

Construction

Quality assurance has always been our priority. Therefore, we established a specialized construction team within the organization focused on developing customized solutions, specifically designed in accordance with customer requirements.

We are able to provide a broad array of construction solutions, including the site preparation for temporary and permanent buildings and infrastructure works such as roads, walkways, parking areas, landscaping, fencing, and force protection. Our construction management process integrates the engineering, procurement and construction functions from start to finish.

Prefabricated Facilities

Infrastructure development is an essential ingredient and a key factor to achieving a better quality of life. Our mobile infrastructure solutions include an assortment of fundamental structures and systems that enhance the comfort and the home resembling environment.

With a proven track record of building high sized construction projects, we improve access to essential infrastructure such as power generation and distribution, supply and assemble of modular containers intended for accommodation, office and ablution usage, construction of logistics camp complexes, healthcare buildings, dining facilities and waste water treatment plants, as well as a broad spectrum of horizontal construction services.

The aim of our mobile infrastructure solutions is to advance the living conditions in emergency-ridden environments. Our high capacity allows us to respond quickly to the most expedited requirements. Ecolog is globally recognized as a leader in planning, building and maintaining any required field facility.

Project Management

Our project management service sets high standards of control and delivery to meet budget and programme targets for diverse construction projects.

We have successfully managed more than 1,100 projects in various countries worldwide and mainly under very challenging conditions. Our highly skilled management team has a proven track record and extensive experience, especially in remote locations. Although each project is unique, we maintain exceptional quality assurance with the highest international standards.

Healthcare Services

Governments and multinational organizations around the world trust our comprehensive healthcare services. With the COVID-19 pandemic, we developed a solution to help public and private sectors combat this global emergency. Today our product line has evolved into customized healthcare solutions available in some of the world’s most remote locations as well.

Healthcare Services include:

- Vaccination Services
- Screening and Diagnostics
- Medical Staffing
- Medical Supply Chain
- Occupational Health Services
- Mobile and Fixed Clinics

Vaccination Services

In 2020, we launched EcoCare to help fight the COVID-19 pandemic. Since then, EcoCare has become one of the leading testing and vaccination facility providers in Western Europe, delivering large-scale Test Centers in Luxembourg, Eindhoven, Bavaria, Brussels and Dusseldorf.

We also built and operated more than 285 testing locations across Germany in collaboration with one of the world’s largest retail chain companies.

Screening and Diagnostics

Ecolog’s Screening and Diagnostics is a comprehensive, turnkey and mobile systemthat can be deployed anywhere. It includes a fully staffed, digitalized screening and diagnostic unit that offers large-scale testing capability and adaptable infrastructure for both current and future testing methods. Our screening, testing, and diagnostics solution is extremely adaptable and quick to implement.

We also developed a modular and highly mobile test unit in collaboration with our specialist partners. The delivery infrastructure, sample-logistics, and test regimens can be adapted to specific needs and are designed to incorporate rapidly advancing testing solutions.

Medical Staffing

Ecolog supports Governments, Corporate Partners and NGO's healthcare projects through a wide range of medical services. We deploy multi-disciplinary medical professionals that specialize in pre-hospital emergency care, emergency medicine and advanced life support.

Our modular solution combined with our integrated approach is centered around your daily operational requirements, whether you are operating onshore, offshore or a remote facility. The level of healthcare we offer ranges from a single on-site paramedic, to managing a full medical facility with in and outpatient services, full surgical, pharmacy and laboratory capabilities.

Medical Supply Chain

Ecolog’s Medical Supply Chain services offers a robust solution for our clients. By leveraging our global logistical capabilities, we manage the procurement and mobilization of medical supplies and equipment following international standards of cold chain integrity. Add to this capability, we can provide equipment maintenance, calibration and resupplies globally. Our medical supplies offer a legal compliant solution to your daily operations.

Occupational Health

The Health and Safety of employees, especially in remote and challenging environments, is becoming exceedingly complex and demanding. Ecolog helps clients address their Occupational Health needs through a range of services such as pre-employment checks, periodical screening, exit and fit-to-work health checks, and enhanced through our Topside Support Services, Health Surveillance and Industrial Hygiene Services.

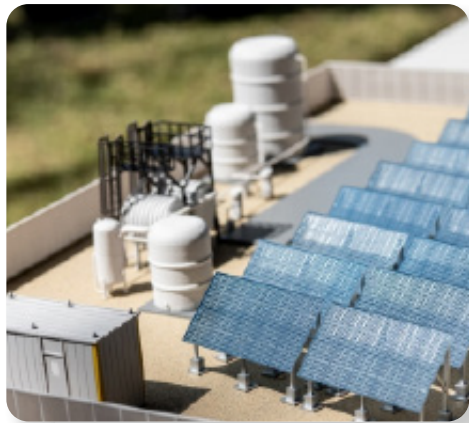

Solutions

EcoCare

EcoCare Solution provides a comprehensive set of services and products to a variety of stakeholders worldwide, ranging from Governments and the public sector to multinational organizations and the wider business community. These solutions have been developed specifically to contain, decelerate and efficiently address a pandemic, such as COVID-19. It includes 3 main pillars:

- 1. Rapid Screening & Diagnostics
- 2. Smart Disinfection Solution
- 3. Rapid Care Park™

Water Solutions

Our efforts are focused on smartly managing water across the entire value chain. We deliver a broad range of integrated solutions, leveraging advanced technology, engineering and project execution.

- Wastewater in upstream, (fluid management solution and water recycling)
- Disrupting production for affordability and suitability at scale and of course (solar thermal desalination)
- Responsibly managing the wastewater from the industry and driving Zero Liquid Discharge (Industrial water treatment and ZLD).

Eco City

Eco City is our package solution for planning, mobilization, execution and monitoring of all activities provided within a municipality or urban environments.

Based on our standardized approach to complex project management and integrated operation centers, we offer turn-key solutions that manage various aspects of an urban infrastructure including solid waste management, waste water management, facility management, hazardous waste, vector control, training & development and consultancy.

SMARTSITE™

Ecolog focuses on efficiency and sustainability in the oil and gas sector through the integration of advanced technologies and driving decarbonization. In collaboration with SMARTLINE Technology, we provide an innovative and integrated solution to the hydrocarbon industry that allows faster drilling, lower cost and up to 90% reduction in water consumption while improving the environmental footprint.

The SMARTSITE™ fluid recovery system reduces water consumption by up to 90% resulting in no need for waste pits, more oil recovery, and less waste transferred to landfill while minimizing the impact on the environment as well as the cost of managing environmental implications.
