DRIVEN BY INNOVATION

www.gemcosafety.com

GEMCO specializes in design, engineering and manufacturing of special vehicles and shelters with an emphasis on “special”.

All Gemco products are made-to-order for dedicated application areas, including defence and security.

GEMCO®

The STM Mast construction operates stepless at any height between 12 and 45 meters. No additional lockings are required.

The operational direction of the sensor is 360°.

The mast consists of square truss sections. The structure is made of high grade anodized aluminium and stainless steel. This makes it lightweight, ultra-stable and corrosion resistant.

The mast sections are assembled mainly by using stainless steel Monobolts. This prevents problems such as thermal distortion and inconsistent joint quality which are prevalent when using welding techniques.

Moreover it greatly improves the serviceability.

The STM 45's light weight makes installation easy, and the total set-up time is less than 8 min.
