Specialist Glass

# ABOUT US

Dellner Glass Solutions combines two impressive UK production sites, between them with over 150 years' manufacturing experience. The Tamworth site's history based in complex multi metal fabrications and the Consett site, processing complex glass shapes and compositions. The unique synergy of both factories allows us to meet and create endless possibilities for our customer base – providing a true system solution.

Innovation is born from necessity; in our case, we have many customers who need solutions to seemingly impossible problems. If they need a bespoke windscreen with a new, uniquely complex asymmetric curve for the next generation of trains, we have the skill and expertise to deliver it.

# OUR PROMISE

PERFORMANCE • PRECISION • PROTECTION

Our unrivalled capabilities ensure we are able to make you a promise: We will provide the performance you ask for with the precision you specify and the protection you can trust, with a quality of brilliance only Dellner Glass Solutions can supply.

# OUR CUSTOMERS

We provide product solutions to many clients of varying sizes across the UK and overseas.

We're extremely passionate about what we do and our team pride themselves on providing a friendly and responsive service, which we feel is reflected in most of our new clients hearing about us through personal recommendation.

## METAL FABRICATIONS

We have two specialist manufacturing units, our Tamworth facility is dedicated to metal fabrication and assembly work and produces complex, high performance fabrications for the global transport and special vehicles market.

The Tamworth manufacturing facility boasts multiple CNC saws, CNC machining centres, forming machines, welding sets (EN15085), sheet metal punching, routing and folding, in house powder coating and wet painting, dedicated bonding cell (DIN 6701) and various assembly sections to create a myriad of different products to suit our customer needs.

## SPECIALIST GLASS

When it comes to specialist glass, we are often asked to develop new products that not only push the boundaries of design capability, but also must adhere to strict security and safety standards.

When it comes to specialist machinery, toughening plants, printers, laminators, state of art clean rooms, autoclaves; we have it all. Thousands of glazing systems are produced every year under our roof, from simple laminates to complex bends and curves.

# GET IN TOUCH

It's easy to get in touch with one of our experts, whether it's for a technical question or a business enquiry. Simply contact us using the details below.
