SURVIVABILITY SOLUTIONS FOR TOMORROW'S BATTLEFIELD

www.cesarmour.co.uk

TECH & SPECS

- ✓ NIJ 0108.01 and NATO STANAG 4569 solutions for large and small platforms
- ✓ Ultra-lightweight composite armour solutions to enable higher speeds and manoeuvrability
- ✓ Optimal performance in harsh maritime conditions
- ✓ Modular protection systems for mission critical areas

INTEGRATED PROTECTION SYSTEMS

Our comprehensive protection solutions work in combination with vessels' hulls to provide additional ballistic protection from high-level threats. The system can be added externally as a stand-alone application, or internally behind the face of the hull to work in conjunction with existing hull material. All our protection systems are designed to integrate seamlessly with new build vessels as well as with upgrades and re-fits.

PATROL BOATS

Our portfolio of ultra-lightweight protection solutions are specifically designed for use on patrol boats, RIBs and smaller craft, with modular systems that provide protection to critical areas such as cockpit, console or gunner positions. Composite protection solutions are significantly lighter than conventional steel armour which enables smaller, lighter vessels to achieve higher speeds and retain manoeuvrability.

AUXILIARY NAVAL SYSTEMS

At CES, our range of modular naval shield and auxiliary systems can be modified for use in multiple areas of your fleet to protect portable and fixed gunner positions. Our shields can also be adapted to suit new and existing vessel configurations to ensure enhanced, standardised protection across the ship.
