FENIX INSIGHT

OSINT + AI :
INSIGHT INTO GLOBAL CONFLICT

Fenix Insight is an AI-powered intelligence system that caters to the needs of defense professionals who operate within current and past conflict zones.

The system provides a clear and concise picture of munitions use worldwide by analysing millions of online resources.

> **The best system of its type, civil or military, anywhere in the world**

From chaos to clarity

Benefits of Fenix Insight

> Local news, social media and dark web monitored and mapped 24/7 in multiple languages

> Powerful AI-assisted OSINT search

> Risk heat-maps, event maps and charting for over 90 countries

> Cuts through the noise of open-source intelligence, turning chaos into clarity and providing rapid factual results

> Powered by A.I and validated by an expert panel of world-class technical analysts

> A comprehensive and exceptionally detailed munition technical database

> A searchable library of over 30,000 munition images providing detailed technical data around the munitions

Visualise emerging threats and highlight vulnerabilities

24/7 monitoring of news, social media and dark web A database of over 6 million data points and counting

posts 24,000x faster than a human analyst

Over 2,000,000 articles processed each month

Generates reports 10x faster than a human researcher

Reads and categorises online news and social media

Machine vision: from video to verified source

We have trained AI visual detection systems with unrivalled accuracy.

Our prototype OSINT visual monitoring system can download video from social media apps and analyse up to 1.5 million video frames a day for specific munitions

Our high quality munition recognition systems are ready to be incorporated into the visual detectors of vehicles, drones, autonomous systems, body cams or heads-up-displays.

Advanced Platforms Database:

Fenix Insight will be expanding our world-class munitions technical database to feature platforms and vehicles including UAVs, airframes, tanks, IFVs, artillery, water and space platforms.

About Us

Founded by world-leading industry experts, Colin King and David Hewitson, Fenix Insight brings together many years' experience in mine action, explosive ordnance disposal (EOD) and quality, environmental and safety management systems.

Colin and David have long-standing experience in producing guides and reports for the industry, including detailed munition standard operating procedures (SOP), all the way to strategic guides and setting standards, contributing to the International Mine Action Standards (IMAS).
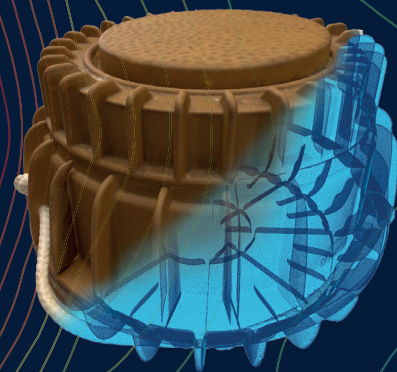

We are proud to have an exceptional team of experts, some of the industry's leading technical specialists, developers and project managers working for us.

Surrogates & Inert Hardware

Drawing on our extensive hardware collection, Fenix Insight provide surrogate munitions to a wide range of organisations for training, research and development.

We are often also able to source real (inert) items of hardware according to availability.

We can make these available for purchase or hire based on your requirements.

mineaction.net

Launched in 2020, Mineaction.net is a free tool developed by Fenix Insight for searching and checking International Mine Action Standards (IMAS).

Explosive Hazard Awareness Playing Cards

Fenix Insight create a number of local language Explosive Hazard Awareness playing cards to provide to EOD operators, front-line units, schools, kids camps and community awareness projects. During 2023, Fenix have printed 40,000 packs of local language Ukrainian playing cards to raise awareness of hazards arising from the current conflict.
