Collaboration for aerospace

Protect the world's most advanced engineering development programs whilst fostering creativity for dispersed teams.

Collaboration for classified, cross-function teams.

Real-time digital teams

Leverage digital workspaces. Empower remote experts to share, view and modify digital assets in real time.

Brand it as your own

Fully customizable user experience with branding, watermarks and backgrounds. Play security advice at the start of meetings and increase awareness with classification markers.

Enforce compliance

Ensure regulatory compliance e.g. ITAR by maintaining data sovereignty by specific region. Retain detailed call records for audit and automate recording or transcription based on policy.

Natural collaboration for remote project teams

Pexip partner nuVa's visual collaboration software provides a natural face-to-face meeting experience, allowing fluent ideation when working on complex remote projects.

NuVa has embedded Pexip's technology into its interactive touch-workspace application to offer a rich 'Human to Machine' interface for natural collaboration experiences.

Remote users simultaneously interact on digital documents and business applications in the horizontal plane and engage with each other through video in the vertical plane.

Aimed at highly complex engineering projects where teams want immersive and comfortable synchronous working, the solution brings stakeholders together to maintain the "digital thread" of computer-aided design (CAD), product lifecycle management (PLM) systems and Internet of Things (IoT) sensors.

Pexip is ITAR compliant, helping our customers ensure adherence to regulations.
