

Sustainable Replacement of Engine Cylinder Heads

Reduction of indirect industrial emissions is a key factor for compliance with **ISO14001** for energy providers

Sustainable **remanufacturing** of cylinder heads reduces indirect carbon emissions in comparison to the manufacture of new. **CIWS is committed to protecting the environment, even though our industry is related to fossil fuel use.** We can evidence our credentials in accordance with **ISO 14040**. (Independently verified).

Formal measurement and analysis was completed in the latter part of 2020 and demonstrated a **reduction of over 89% in carbon emissions**, when comparing our remanufacturing procedure to that of new manufacture.

All critical surfaces and dimension are restored to original!!

- **Reducing** cost.
- **Recycling** OEM components
- **Reduction** of indirect emissions
- **Full warranty**
- **Lloyds approved**

It makes sense to consider **CIWS FusionCast™** remanufacturing
