SOFTWARE LIBRARIES

JPEmbedded's off-the-shelf communication software libraries for IEDs offer platform independent architecture, which fosters porting and reduces the time to market. All software products are highly configurable in terms of the enabled functionality, resources used, and maintain a very low memory footprint. A simplified, royalty-free licensing model and source code access are the primary reasons why our solutions are the first choice for embedded applications.
When requested by the customer we offer integration of our software libraries on the target devices.

	IEC 61850	**ICCP/TASE.2**	**DNP3**	**IEC 60870-5-103**	**IEC 60870-5-104**
