

One Suite to Fly Them All!

Save 2 hours a day, per drone team with Sharper CORE's Drone Service Provider Workflow Management Software

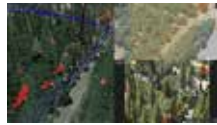

"The process of coordinating the entire workflow is the most crucial to scaling more clients and recurring services".

- One software suite to manage all needed tools in one space!
- Control access to relevant projects to relevant workers.
- Effortlessly distribute work to drone teams
- Quickly upload georeferenced images from drones and other systems, and reference them to assets
- Seamless flow that handles massive amounts of data - images, point clouds and issues
- Easily add asset and flight orders - then assign them to drone operator, track flight order progress, and see uploaded material on Sharper CORE.
- Track hours and other basic drone flight tracking/fleet management.
- Share results with an end customer (e.g. utility provider) for viewing and use (e.g. inspection or maintenance workflow).

Sharper Shape's 4D Living Digital Twin software answers every utility challenge by providing automated collection, real time visualization, analysis and actionable, decision making insights for inspectors and field crews - everything you need to make your utility sharper and better.
