Rain water metering

LoRaWAN®

We provide LoRaWAN to European IoT and utility projects

We provide nation-wide **LoRaWAN connectivity across Europe**. Our carrier grade network **(24/7 monitoring)** is purpose-built to onboard millions of devices. On top of **indoor and outdoor** connectivity, we also provide an **easy-to-use platform** with advanced features to manage and control the devices and the network. Our European network is growing, and we currently support hundreds of projects with **reliable LoRaWAN**.

Faster go-to-market for your application with our rollout program

We enable quick and easy go-to-market for IoT solutions based on devices that rely on LoRaWAN connectivity. This is made possible trough both full API and a portal with plug-and-play connection of devices with mass onboarding functionality combined with pay-on-activation subscription model.

Get increased availability, visibility and coverage on-demand for your application

Our LoRaWAN portal provides full network visibility, real-time device dashbboard/map and both measures and simulated coverage. As an operator, we provide on-demand coverage in places that may not be covered at the time.

Predictive and affordable model which enables higher long term profitability

We offer an all-inclusive price model to enable 100% predictable cost of connectivity. Free trial available on request.

Netmore LoRaWAN features and benefits

• The Netmore LoRaWAN portal

Get a full detailed overview of connected devices in the network, on both aggregated- and device level, all visualized on a map and dashboard view. Both actual measured and simulated coverage can be visualized in map view. The API has full data access, and all data is protected by full end-to-end security of payload data.

• Coverage on demand

Network coverage and signal quality is key to scalability in many IoT cases. As a dedicated IoT operator, we deliver LoRaWAN coverage to large scale utility applications.

• All-inclusive price model

All our features and tools are included in our transparent price model. This ensures that our customers get both full cost predictability and a LoRaWAN experience that is hard to beat.

• State of the art network

Carefully selected and tested gateways creates the foundation for our carrier grade LoRaWAN. Our network is monitored 24/7 and supported by experts. Our purpose-built network is prepared to onboard millions of devices.

• The Netmore Market

We offer a marketplace where a large number of different players within LoRaWAN get a dedicated place and have the opportunity to market and sell their products and services. We validate and choose to ensure high-quality solutions and hardware compatibility.
