

DRIVING CLIMATE RECHARGE.

driivz

Driivz powers the e-mobility revolution with a market-leading, end-to-end EV charging and energy management solution. We enable our customers to accelerate their market leadership by growing their charging infrastructure and delivering an exceptional charging experience, while optimizing operations, reducing TCO, speeding time-to-market and maximizing revenues.

Operational excellence

- Ensure charger stability and availability with self-healing algorithms
 - Reduce total cost of ownership with smart charging management
- Up to 80 percent of operations issues fixed remotely

Technological leadership

- Certified by OCA for Open Charge Point Protocols (OCPP 1.5,1.6)
 - Complies with ISO 15118 and OCPP 2.0.1 enabling vehicle-to-grid (V2G) communications
- Our platform supports more than 700 OCPP-certified chargers

Commercial superiority

- Monetize your network and support complex business models
 - Increase end-customer satisfaction with advanced self-service tools
- Managing millions of billing transactions per month of more than 1 million EV drivers

Visionary and future proof

- Enabling distributed, renewable, smart energy management
 - Supporting exponential EV market growth
- Working with market leaders in over 30 countries worldwide

Driivz's comprehensive, robust EV charging solution

Driivz in Action●

The cloud-based platform consists of a variety of modules such as: Operations Management, Energy Management, Billing Management, Driver Self-service Tools and EV Fleet Management. They can be used as individual modules or as a single, unified, open platform that integrates quickly and easily with existing infrastructure.

Operations management

Streamline and optimize your network operations and increase customer satisfaction.

Streamline decision-making Our reports and analytics-driven insights empower decision-makers as well as technical leads to make the most efficient business and operational decisions

Improve back-end performance with a 24/7 automated alert management system that detects and proactively resolves issues in real time

Reduce TCO using self-healing algorithms to address up to 80% of operational problems remotely

Accelerate time to market by deploying large scale networks and performing global migrations within weeks instead of investing in months or years of development

SmartChain energy management

Harness and maximize existing energy resources, efficiently distributing available power among your infrastructure, vehicles, and other power consumers overcoming local grid capacity and balancing demand throughout the day.

Optimize your charging infrastructure by efficiently monitoring, managing, and adjusting energy consumption to provide optimal demand response

Maximize energy resources by utilizing locally generated renewable energy, charging stations, battery storage, and all other site elements

Reduce TCO leveraging smart charging to optimize energy consumption and avoid costly infrastructure upgrades

Benefit from complete **scalability and flexibility** with near real-time time load management for single chargers, sites, and complete campuses

Billing management

Monetize your network with our industry specific billing solution, designed specifically for international, large-scale EV charging networks to address every aspect of your billing operations.

Increase revenues by streamlining the billing process and ensure efficient, error-free billing cycles

Enhance agility by easily managing multiple billing plans that cater to your business needs and easily adjust them based on peak charging times and cost of energy

Streamline partner operations with a scalable and flexible integration of settlements between different parties in the ecosystem into your network offering

Improve offerings using billing-oriented analytics and driver-pattern data to provide customized plans for your customers and business partners

Driver self-service tools

Empower drivers to control their entire EV charging experience with a user-friendly, self-service, white-labelled mobile or web app delivering the most advanced features, increasing satisfaction and loyalty.

Optimize the end-user experience with a seamless and intuitive user interface to manage driver profile, notifications, payments, account members, and vehicles

Strengthen customer relationships with a flexible, customizable branded application, providing simplicity and familiarity

Increase mobile app adoption enabling drivers to plan their route, navigate to a charger, pay, reserve-ahead or report an issue

Enhance driver visibility with easy access to personal, real-time insights on charging history, transactions, account information, and more
