

TEKTELIC IoT Solutions Overview

August 2024

TEKTELIC Introduction

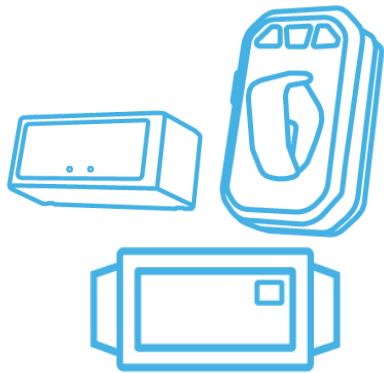

- » Largest and most comprehensive portfolio of **Carrier Grade** LoRaWAN® Gateways designed to minimize operator Total Cost of Ownership for any deployment
- » Trusted by **400+ customers worldwide** who solve real problems with high-value IoT solutions
- » Focused on our **customer's success** by guiding and helping them to deploy the most reliable and lowest-cost IoT networks (instead of selling more gateways they don't need)
- » Simple to Deploy IoT Solutions that address Real Problems in three verticals: **Facility Management, Asset Tracking, & Digital Medicine**

TEKTELIC Key Value

- » **Best Performance** and **Lowest Deployment & Operating Cost** IoT Networks that last for 10+ years
- » **Simple to Deploy IoT Solutions** that address Real Problems in three verticals: **Smart Buildings**, **Asset Tracking** & **Digital Medicine**
- » **Exceptional Engineering, Customer Support & Guidance** to address Customer Use Cases and Deployment Issues

LoRaWAN® Network Architecture

Low Total Cost of Ownership & Best-In-Class Performance Solutions

Devices & Sensors

Gateways

Cloud Servers

Applications

The only company that owns complete LoRaWAN network solutions

LoRaWAN® Network Features

Long Range

- » Greater than cellular
- » Deep indoor coverage
- » Star topology

Maximum Battery Life

- » Low power optimized
- » 10-20yr lifetime
- » >10x vs cellular M2M

Multi Usage

- » High capacity
- » Multi-tenant
- » Public/Private network

Low Cost

- » Minimal infrastructure
- » Low cost end-node
- » Open Software
- » Growing Eco-system

LoRaWAN® Differentiators and Benefits

Geolocation

- » In/out door
- » Accurate
- » No Battery Impact

Bi-Directional (FDD)

- » Acknowledge
- » Scalable Capacity
- » Broadcast

Global Standard

- » Global Standard
- » True Mobility
- » Seamless
- » Roaming

Secure

- » Unique ID
- » Application
- » Network

IoT Solutions **Focus Areas**

Smart Cities & **Buildings**

IoT in **Healthcare**

Asset **Tracking**

Smart **Agriculture**

Sample & Unique IoT Solutions

A blue-tinted photograph of a modern city street. The scene shows a wide road with multiple lanes, crosswalks, and a few cars. Tall buildings with many windows line the street. The overall atmosphere is clean and urban.

Smart Cities & Buildings

BREEZE & BREEZE-V

Schools

- Monitor CO2 levels to ensure a healthy, productive learning environment for students and staff
- Analyze HVAC to ensure optimal airflow through the building efficiency

Commercial Buildings

- Improve workplace productivity and employee health ensuring optimal ventilation and airflow in workplace settings
- Save costs by optimizing HVAC systems to ensure rooms are only being actively heated and cooled when necessary

Healthcare Facilities

- Ensure hospital rooms are being properly ventilated, reducing the risk of virus spread
- Improve patient, staff and visitor comfort by monitoring ambient indoor conditions

KEY FEATURES

- » Measures CO2, Temperature, Humidity, Atmospheric Pressure and Occupancy
- » Small, Compact Design for Deployment Anywhere
- » Zero-touch CO2 Autocalibration
- » Implements pressure compensation to provide highly accurate CO2 readings
- » Optional e-Ink display to visualize CO2, Temperature, Humidity and Battery Status
- » 5+ year battery life

COMFORT & VIVID

Smart Office

- Occupancy monitoring to optimize space utilization and adjust heating, cooling, and lighting accordingly to save costs and energy when spaces are unoccupied.
- Monitor room and building utilization for predictive maintenance and optimized cleaning

Facility Management

- Leak detection monitoring to ensure rapid response to leak events, minimizing damage and reducing costs
- Pulse counting for water metering to manage and regulate water consumption, increasing efficiency and reducing costs

Hotels

- Reduce costs and enhance guest comfort by managing room lighting, heating and cooling based on occupancy
- Manage and optimize room cleaning schedules based on room utilization

KEY FEATURES

- » Temperature, Humidity & Light Monitoring
- » Acceleration G-Force & Impact Monitoring
- » Occupancy (VIVID)
- » Open/Close Windows & Doors
- » Pulse Counting (Meter Reading)
- » Leak Detection
- » Small, Compact Form Factor for Deployment Anywhere
- » Discreet and Simple to Deploy
- » 10+ year battery life

COMFORT Leak Detection

Water Tanks

- Installing leak detection sensors near hot water tanks enables early detection of leaks, preventing water damage and potential flooding
- Monitoring for leaks around water tanks allows for proactive maintenance, reducing the risk of damage to the building

Pipe Leaks

- Placing leak detection sensors along pipes helps identify weak points or potential areas of corrosion, allowing for timely repairs or replacements
- Detecting leaks along pipes helps minimize water waste and conserves resources by addressing leaks promptly and efficiently

Indoor Air Conditioning

- Early detection of leaks near indoor A/C units prevents water damage to the equipment and surrounding structures
- Monitoring for leaks around indoor A/C units helps preserve indoor air quality by preventing mold and mildew growth caused by moisture accumulation

KEY FEATURES

- » 10+ Year Battery Life
- » External Leak Rope or Probe
- » Small, Compact Form Factor for Deployment Anywhere
- » Discreet and Simple to Deploy
- » Alerts and Alarms for Leak Events

TUNDRA

Supermarkets

- Ensure optimal temperature for food storage, maintaining product quality and preventing spoilage and waste
- Early warning for malfunctioning fridges and freezers allowing for corrective action before food is spoiled

Restaurants

- Ensure that refrigerators and freezers maintain proper temperatures to comply with food safety regulations, prevent foodborne illnesses and maintain product quality
- Log temperature data as evidence of compliance during health inspections, demonstrating a commitment to food safety protocols

Medical Facilities

- Monitor cold storage areas for medications and pharmaceuticals to prevent degradation and ensure potency
- Maintain precise temperatures in vaccine storage units to safeguard vaccine efficacy and comply with strict storage requirements

KEY FEATURES

- » Measures Temperature and Humidity in Cold Storage Environments
- » Wide Temperature Range -40C to +85°C
- » Multiple Variants for Flexible Deployment
- » Rugged IP67 Design for Deployment in Harsh Conditions
- » Designed for simple installation
- » 15+ year battery life

TEMPO

Corporate Meeting Rooms

- Real-time Outlook and Google calendar integration to optimize meeting room usage
- Detailed analytics about room utilization and demand, can be used to save HVAC and cleaning costs

Schools & Universities

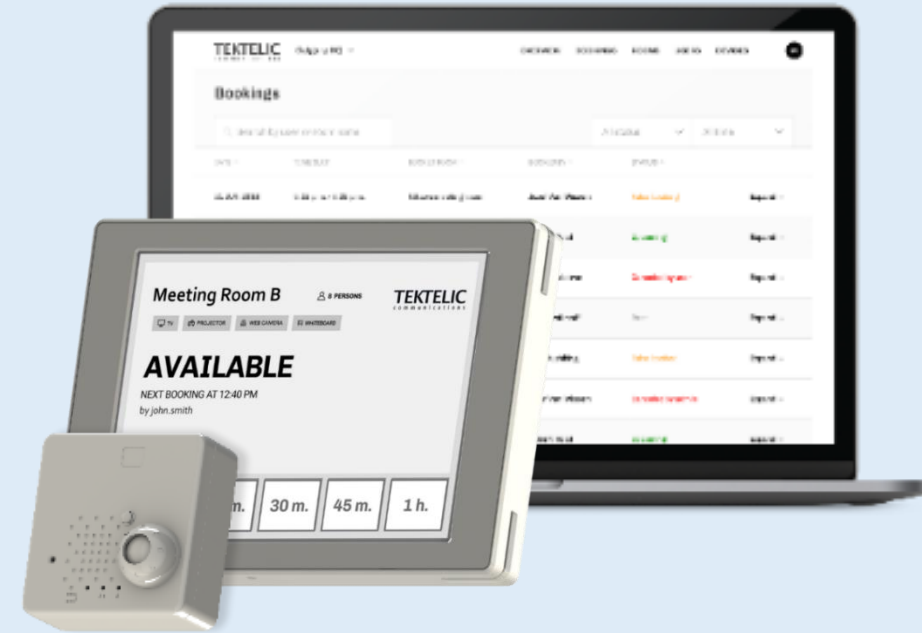

- On-the-spot and online bookings to simplify classroom and study room reservations
- Calendar integration reduces administrative efforts for efficient usage

Clinics & Healthcare Facilities

- Immediate room availability on TEMPO tablet supports on-the-spot reservations for healthcare professionals
- Identify peak usage, optimizing staff and room allocation for efficient clinic operations.

KEY FEATURES

- » End-to-End Solution including e-Ink display tablet, and full featured application
- » Integrated with Outlook and Google Calendar
- » Displays real time room availability
- » Allows users to "grab" a room using Display
- » Customizable layout & visualization
- » Fully wireless, can be deployed anywhere
- » Generates room utilization analytics
- » 1+ year battery life

MEMO

Smart Office

- Enables effective messaging and announcements
- Supports custom messaging and graphics to align with corporate branding

Retail

- Long battery life ensures cost-effective and uninterrupted retail signage
- Versatile graphics capture customer attention, enhancing sales impact
- Supports customizable and dynamic product promotions.

Healthcare Facilities

- Displays current patient information, reducing the need for paper-based communication
- Automates clinic management activities, freeing up staff for patient-focused support

KEY FEATURES

- » Custom texts, messages and graphics
- » Fully wireless, can be deployed anywhere
- » Multi-language support
- » Displays high-value sensor data
- » Customizable layout & visualization
- » 1+ year battery life

AURA & FLUX

Building Automation

- Control the power supply to appliances, lights, and equipment remotely to optimize energy usage and reduce utility costs based on occupancy schedules and demand patterns
- Monitor energy usage and operating status of building appliances, enabling predictive maintenance and reducing downtime.

Industrial

- Remotely control power to industrial machinery, tools, and equipment to optimize usage, reduce energy waste during idle periods, and improve overall operational efficiency
- Monitor industrial equipment utilization and schedule maintenance activities, increasing productivity and minimizing downtime

Smart Home

- Remotely control lights, appliances, and devices from anywhere, providing convenience, flexibility and peace of mind for homeowners
- Monitor energy usage of individual devices and appliances to Orometer optimize usage and reduce utility bills

KEY FEATURES

- » Building Automation and Control
- » Reduced Energy Consumption
- » Simple Installation
- » Can Integrate with any Smart Building System
- » Tamper Resistant

Asset Tracking

SPARROW

Hospitals and Healthcare Facilities

- Reduce time spent searching for critical equipment in hospital workflows.
- The built-in accelerometer aids preventive maintenance by monitoring equipment usage patterns.

Smart Office

- Providing immediate insights into asset whereabouts for efficient decision-making.
- Real-time monitoring reduces theft risk, unauthorized use, and may lower insurance and replacement costs.

Warehouses

- Optimizes inventory management with accurate, real-time asset tracking.
- Improve asset visibility across warehouses.
- Enhances insights into asset utilization for efficient warehouse operations.

KEY FEATURES

- » Accurate indoor positioning via BLE (~2 meters)
- » Long range wireless communication
- » Tampering and movement detection
- » Small form factor for simple deployment
- » Accelerometer for event-based tracking
- » 5+ year battery life

PELICAN & PELICAN EX

Smart Manufacturing

- Real-time tracking optimizes asset flow on the production floor
- Prevents asset loss by ensuring constant visibility across manufacturing operations

Warehouses

- Track and monitor warehouse equipment (forklifts, boom lifts, inventory carts) both indoors and outdoors
- Monitor the flow of goods within the warehouse to optimize picking routes, reduce picking times, and improve order accuracy

Industrial, Oil & Gas

- PELICAN Ex provides constant visibility in challenging and hazardous environments
- Enhances operational efficiency, safety, and prevents asset loss

KEY FEATURES

- » Hazardous (Class 1 Div 2 /ATEX) Compliant
- » Accurate location (~2 meters)
- » Long range wireless communication
- » Multiple mounting options
- » Easy to deploy and operate
- » Ruggedized and weatherproof - IP67
- » -40C to +85C temperature range
- » Hazardous (Class 1 Div 2 /ATEX) condition
- » 15+ year battery life (PELICAN)
- » 5+ year battery life (PELICAN Ex)

ORCA

Industrial Equipment Tracking

- Indoor and outdoor tracking of high-value industrial equipment
- Monitor equipment movement and utilization for predictive maintenance

Container and Pallet Tracking

- Precise real-time indoor and outdoor location for comprehensive asset traceability across diverse locations
- Track and monitor containers during loading, unloading, and in-transit

Fleet Management

- Optimizes routes, ensuring efficient navigation and reducing operational costs
- Facilitates proactive maintenance scheduling, enhancing asset longevity and minimizing unexpected breakdowns

KEY FEATURES

- » Accurate GPS Outdoor & Indoor location
- » Long range wireless communication
- » Easy to deploy and operate
- » Ruggedized and weatherproof (IP-67)
- » -40C to +85C temperature range
- » Accelerometer for event-based tracking
- » 5 year battery life (Outdoor and Indoor)

SEAL & SEAL Ex

Lone Worker Safety in Construction

- SEAL continuously tracks workers in real-time using GPS and BLE, ensuring heightened safety on construction sites
- Geofencing capabilities provide custom audible and visual alerts, heightening worker awareness

Mining Worker Safety

- SEAL's altitude measurement ensures worker safety in mining, addressing challenges of varying terrain
- Audible and visual alerts reduce the risk of accidents for mining workers

Industrial Work Sites

- Detects incidents or falls, triggering rapid emergency response for worker safety in industrial facilities
- Ensures safe operation in challenging industrial conditions, providing workers with a reliable safety solution

KEY FEATURES

- » Accurate GPS Outdoor & Indoor location
- » Fall and motion detection
- » Altitude and height measurement
- » Settable audible and visual alarms
- » User configurable SOS button
- » Optional Safety Harness Clip Detection
- » Ruggedized and weatherproof (IP-67)
- » -20C to +60C temperature range
- » Hazardous Environment Rating (Class 1 Div 2 /ATEX)
- » Up to 15 month battery life

STORK

Construction Sites

- Continuous location tracking of high-value construction equipment including motion alerts, movement patterns and geofencing
- Monitor the location and usage and fleet vehicles, trucks, and trailers for optimized routes, improve fuel efficiency, and preventative maintenance

Warehouses

- Track and monitor warehouse equipment (forklifts, boom lifts, inventory carts) both indoors and outdoors
- Monitor the flow of goods within the warehouse to optimize picking routes, reduce picking times, and improve order accuracy

Supply Chain Logistics

- Track and monitor pallets and other shipments during loading, unloading and in-transit
- Gain visibility into the environmental and external conditions (ie. impact) the shipment has been exposed to in transit

KEY FEATURES

- » Outdoor Positioning via Low-Power GNSS
- » Indoor Positioning via BLE and Wi-Fi Sniffing
- » Optional 12V External Power
- » Accelerometer
- » Rugged IP67 Design
- » Small Form Factor for Diverse Deployments
- » 5+ Years Battery Life

CHICKADEE

Construction Sites

- Monitoring the location of workers at all times to ensure their safety, analyze movement patterns and setup restricted area alerts
- Access control to ensure only authorized personnel are accessing restricted or hazardous areas of the worksite

Hospitals

- Tracking of healthcare personnel to ensure worker safety and to optimize workflows
- Monitor the location of patients within the hospital facility, to ensure their safety and provide timely assistance if needed

Office Workers

- Access control to enforce entry to restricted areas and gain insights into employee movement patterns
- Monitor the occupancy of office spaces, conference rooms, and collaborative areas to optimize space utilization and enhance office safety

KEY FEATURES

- » Outdoor Positioning via GPS & Low-Power GNSS
- » Indoor Positioning via BLE and Wi-Fi Sniffing
- » Optional 12V External Power
- » Accelerometer
- » Optional RFID
- » Wearable Badge Form Factor
- » SOS Button for Real-Time alerts
- » 6+ Months Battery Life (Rechargeable)

FINCH

Hotels

- Hotel staff can quickly and discreetly notify the front desk in case of emergencies such as medical incidents, security threats, or accidents
- Helps hotels adhere to legal requirements and industry standards related to guest and staff safety and security, reducing liability risks associated with emergency situations.

Schools

- Students and Staff can send a notification if they feel unsafe or require immediate assistance
- Students can be monitored for presence and safety on the bus when commuting to and from school

Long Term Care Facilities

- Residence can call for assistance in the case of falls, medical emergencies or if any support is needed
- Allows staff to call for assistance or report incidents promptly, enhancing their safety and security while performing their duties

KEY FEATURES

- » Panic Button
- » Indoor Positioning via BLE
- » Small Discreet Form Factor
- » Clipped to Belt or Lanyard
- » 5 Year Battery Life

ROBIN

Industrial Oil & Gas

- Workers can call for help in case of accidents, medical emergencies, hazardous situations or security threats
- Offshore personnel can activate the panic button to alert crew members and initiate search and rescue operations in the event of a man overboard situation

Construction Sites

- Enhanced worker safety, faster emergency response and improved incident management at construction sites
- Provides the company with insights into worker presence, activity and movement patterns

Lone Workers

- Workers can check-in when they have arrived at the remote worksite
- Lone workers can call for help in the event of an emergency situation without reliance on a smartphone or LTE network

KEY FEATURES

- » Panic Button
- » Outdoor Positioning via BLE
- » Rugged IP67 Design
- » Wearable Form Factor - Clipped to Belt or Lanyard
- » 15 Year Battery Life

IoT in Healthcare

eDoctor

Hospitals

- Streamlines medical personnel efforts, reducing workload of manual vital checks
- Optimize resource utilization in hospitals
- Enhance the accuracy and quality of patient care

Remote Patient Monitoring

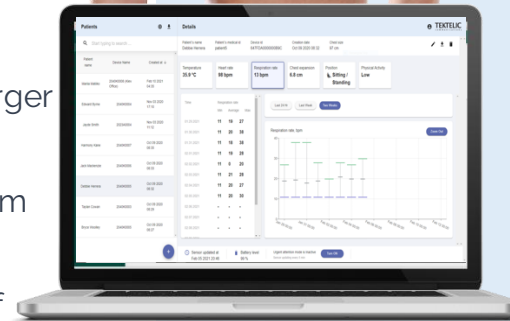

- Extended range connectivity allows monitoring in larger homes and outdoor spaces
- Continued respiratory monitoring after discharge from the hospital
- Peace of mind for family regarding the well-being of aging individuals at home

Long-Term Care

- Reduces overall healthcare costs for nursing homes
- Continuous monitoring provides detailed insights of residence respiratory health
- Ensures timely responses to specific needs.

KEY FEATURES

- » Long range wireless communication
- » 24/7 autonomous operation
- » End-to-End Patient Monitoring Solution with Application
- » Vital signs data and analysis
- » Alarm setting and monitoring
- » Simple to Use
- » No reliance on Smartphone or Cellular Network
- » 3 month battery life

CORE FUNCTIONS

- » Body Temperature
- » Heart Rate, HRV and Rhythm
- » Respiratory Rate
- » Chest Expansion
- » Body Position
- » Activity

eBeat

Hospitals

- Streamlines medical personnel efforts, reducing workload of manual vital checks
- Optimize resource utilization in hospitals
- Enhance the accuracy and quality of patient care

Remote Patient Monitoring

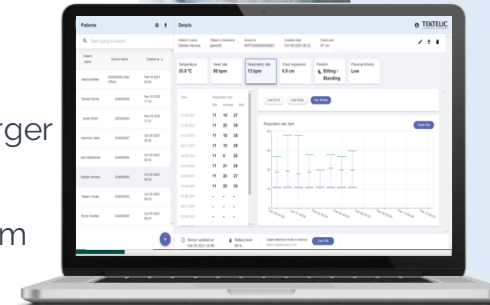

- Extended range connectivity allows monitoring in larger homes and outdoor spaces
- Continued respiratory monitoring after discharge from the hospital
- Peace of mind for family regarding the well-being of aging individuals at home

Long-Term Care

- Reduces overall healthcare costs for nursing homes
- Continuous monitoring provides detailed insights of residence respiratory health
- Ensures timely responses to specific needs.

KEY FEATURES

- » Long range wireless communication
- » 24/7 autonomous operation
- » End-to-End Patient Monitoring Solution with Application
- » Vital signs data and analysis
- » Alarm setting and monitoring
- » Simple to Use
- » No reliance on Smartphone or Cellular Network
- » 4 month battery life

CORE FUNCTIONS

- » SPO2 (Blood Oxygen)
- » Body Temperature
- » Heart Rate, HRV and Rhythm
- » Respiratory Rate

A large, modern greenhouse with a complex metal frame and a grid of plants growing in rows. The plants are arranged in neat, rectangular beds, and the overall scene is bathed in a blue light. The text "Smart Agriculture" is overlaid in the center in a white, bold font.

Smart Agriculture

KIWI & CLOVER

Greenhouses

- Microclimate monitoring to ensure optimal Temperature and Humidity conditions specific to the crop for increased yields
- Soil Moisture monitoring to optimize irrigation and reduced water waste

Commercial Crops

- Ambient environment monitoring to ensure ideal crop placement and optimized yields
- Integrate with automated irrigation systems for optimized watering based on real-time soil conditions

City Parks & Golf Courses

- Monitor soil moisture conditions for optimized water truck route planning
- Monitor ambient environmental and soil conditions to assess the health and vitality of grass and plants within the park

KEY FEATURES

- » Accurate Soil Moisture monitoring
- » Ambient temperature and humidity monitoring
- » Integrated Lux meter for ambient light conditions
- » Easy to deploy and use
- » Multiple mounting options (KIWI & CLOVER)
- » Integrated with Irrrometer Watermark® sensor and 3rd party soil thermistors (KIWI)
- » Ruggedized and weatherproof
- » 10+ year battery life

TEKTELIC Summary

- » The only company in LoRaWAN ecosystem that developed all Network elements
- » Most extensive portfolio and market share of Carrier Grade LoRaWAN Gateways optimized for operator lowest Total Cost of Ownership
- » Devices and Solutions focused on high-volume and high-value Enterprise use-cases
- » Setting additional Sales and Support offices in the Middle East, Asia and Latin America to expand global sales
- » 2023-25 R&D investment focused on Application development to offer customers complete IoT solutions, Digital Medicine solutions for Hospital and Remote Patient Monitoring, and introduction of Cellular IoT Devices
- » Continue with 30%+ IoT Products and Solutions Revenue Growth over 3-5 years

TEKTELIC LoRaWAN® Solutions

The ideal solution for Public and Private Network Operators that require a Carrier Grade and Cost Effective IoT solutions that scale with business.

IT JUST WORKS™
