

NME s.r.l.

Turbomachinery

GAS COMPRESSORS
BLOWERS
FANS

Turbomachinery exchange energy between rotor and fluid, including both turbines (energy from fluid to rotor), and compressors (energy from rotor to fluid).

In addition to energy production machines, NME provides a wide range of turbomachines including gas compressors, blowers and fans.

NME s.r.l.

Environment

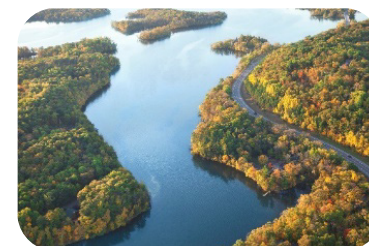

RECYCLING SOLUTIONS FOR:

TYRES
WEEE
FLUORESCENT LAMPS
LCD MONITORS
CABLES
FRIDGES
VARIOUS SCRAPS

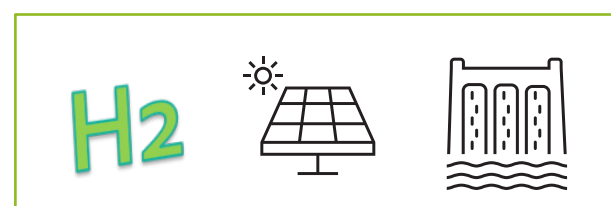

SPIRAL CONVEYORS

NME wants to contribute to the diffusion of advanced technical solutions for the environment protection.

NME Partners are involved in the European ecological transition.

A special focus is set up on machines and solutions for industrial waste recycling.

COMPANY PROFILE

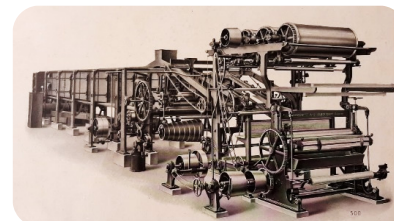

ENERGY
ENVIRONMENT
TURBOMACHINERY
ENGINEERING

History

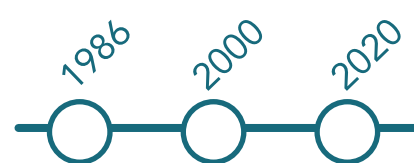

1887
Company MOLTRASIO was founded in Bergamo. Main activity in the textile industry.

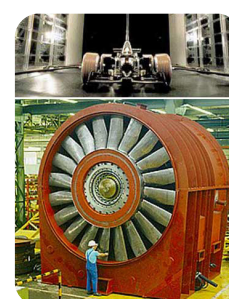

1950
Company MOLTRASIO entered the Power Generation sector, representing KK&K, the German steam turbines manufacturer.

1986
Set up of «Nuova Moltrasio Engineering», then shortened into «NME».

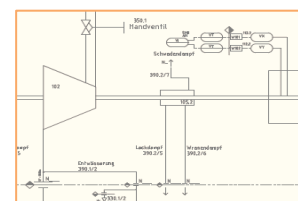

For over 30 years, NME has been acting as Agent of prestigious European manufacturers of high technology industrial machineries and plants.

Over the time, NME has expanded its activity in the Environmental Field, by supplying Recycling Equipment from leading European manufacturers.

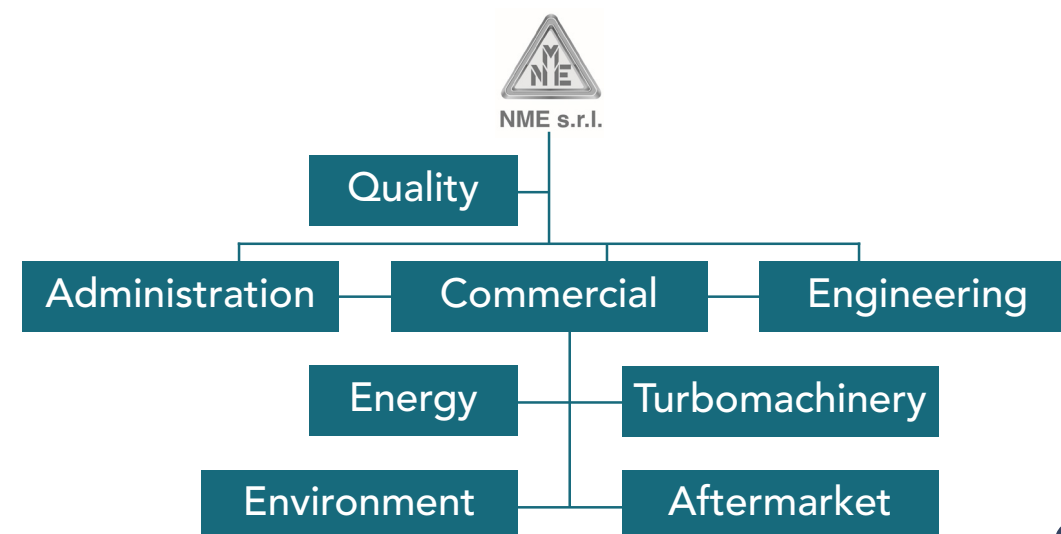

2020
NME widens its range of services by offering engineering and project management.

Team

The business team consists of Technical Sales Engineers, deeply skilled in many industrial areas.

The administrative personnel has good technical knowledges in order to give support in the most widespread foreign languages.

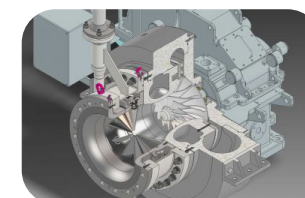

Competence

INDUSTRIAL AGENCY
NME is nowadays sole Agent in Italy of prestigious manufacturers of high technology industrial machineries and plants.

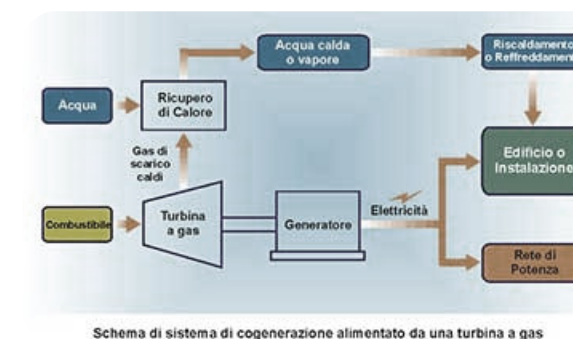

TECHNICAL AND COMMERCIAL CONSULTANCY
NME offers a qualified technical and commercial service, from designing consultancy to investment costs analysis and feasibility studies, as well as technical and commercial proposals.

PROJECT MANAGEMENT
NME support does not end with the sale but goes ahead with order development and aftermarket service.

Engineering

FEASIBILITY STUDIES
NME assists clients starting from design in order to identify the best strategic solutions to reduce energy consumption and to improve the production cycle efficiency.

DETAILED ENGINEERING
NME provides both basic and detailed engineering services to clients and manufacturers, to manage technical issues and help information exchange between clients and suppliers.

Application Fields

Power Generation

Oil & Gas

Recycling

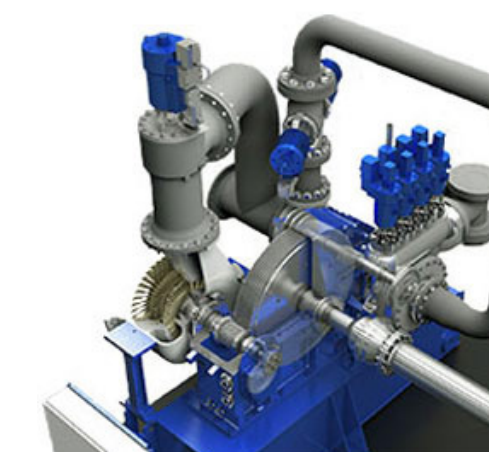

General Industry

Energy

- STEAM TURBINES
- GAS TURBINES
- GAS ENGINES
- HYDRAULIC TURBINES
- HEAT RECOVERY
- DIVERTERS
- BURNERS

The history of humanity and progress has been conditioned over the last centuries by the availability of new energy sources: hydropower and fossil fuels first (oil and gas), then nuclear and renewable technologies.

For energy production, NME provides Gas Turbines, Steam Turbines, Gas Engines, Hydraulic Turbines.

NME offer is completed by auxiliary equipments for thermal cycles and cogeneration units, like heat recovery units, burners, diverters and gas distributors.
