# AIR INTAKE FILTERS

## R&D into GT Air Filtration Media and Configurations

FAIST continuously researches and tests new media and new filters configurations. Important focus is placed on water removal and performance stability, whether with EPA filtration or not, testing against GT OEM proprietary protocols as well as ISO:29461-2 and ISO:29461-4.

**Our preferred configurations are 2-stages with most premium filters:**

**Size matters as we advocate the implementation of larger filters:**
