

Sigfox OG technology is the world's largest unlicensed LPWAN Network & largest global footprint carrier-grade SLA owned by UnaBiz

Benefits of the OG technology

Autonomy

Low-energy consumption, allowing years of battery life

Simplicity

No configuration, connection request or signaling

Cost Efficiency

From the hardware to the network, every step is optimised to be as cost-effective as possible

Ultra-Narrow Band

High traffic capacity by design, seamlessly collecting data from a dense population of devices

Small Messages

No large assets or media allowed on the network, only small notifications optimizing energy consumption

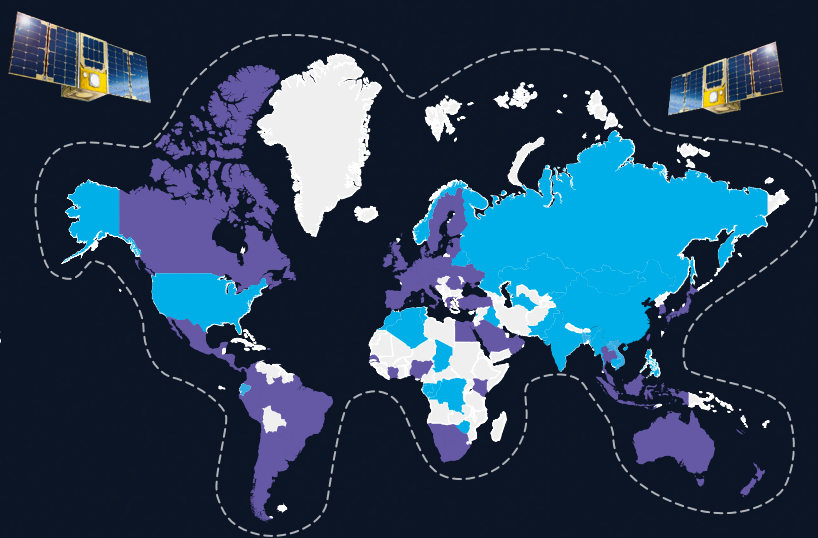

Complementarity

Sigfox OG technology can be used together with any other type of network, e.g.: Wi-Fi, Bluetooth, GPRS, NB-IoT, LoRaWAN

Leading Technology Convergence for a Unified IoT World

UnaBiz drives the Convergence of IoT communication technologies by Opening up the **Sigfox OG technology** and building bridges to other LPWANs. We want to give our customers the freedom to leverage different technologies to achieve their business objectives and ESG goals.
