

*where the future flows*

**Water Meters**

**Thermal Energy Meters**

**Remote Reading Systems**

MADE IN ITALY

**2025**

At B METERS, we have always conceived, designed, and manufactured all of our products in-house, within our own facilities. It's our philosophy. Independence and excellence that make the difference for our customers.

**A Choice of Excellence**

An **italian company** that develops and manufactures all devices and accessories for **water and thermal energy metering**.

The company operates as an **independent and specialized entity**, both **nationally and internationally**, in the metering sector, offering the market a **wide range of complete and integrated solutions**.

# B METERS qualities

Customer appreciation and the many **product certifications** awarded by independent bodies — more than our words — are the **best testament to the quality** of our work.

## Expertise

We specialize in the **private and residential sector**, with consistently growing results.

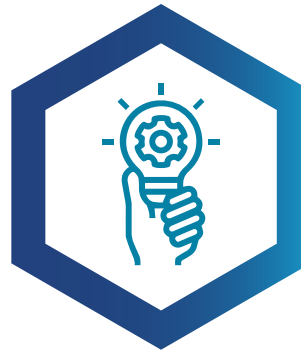

## Competitive

Thanks to integration, we are able to offer the market **high-quality products and solutions** at competitive prices.

## Integration

We work with **100% real and visible integration**, meaning that all of our products are **conceived, engineered, and manufactured** in our own facilities.

## Innovation

We are **innovative, constantly focused on the future** and on greater integration between products and monitoring systems.

# where the future flows

## Independence

---

We are a **100% independent** entity, which makes us **fast, flexible, and very close** to our customers.

## Reliability

---

We have some of the **best delivery times on the market**, ensuring a perfect balance between **speed and reliability**. Our constant commitment is to offer precise service.

# Our history

## ..... Timeline

### Step by step

### Construction and Development

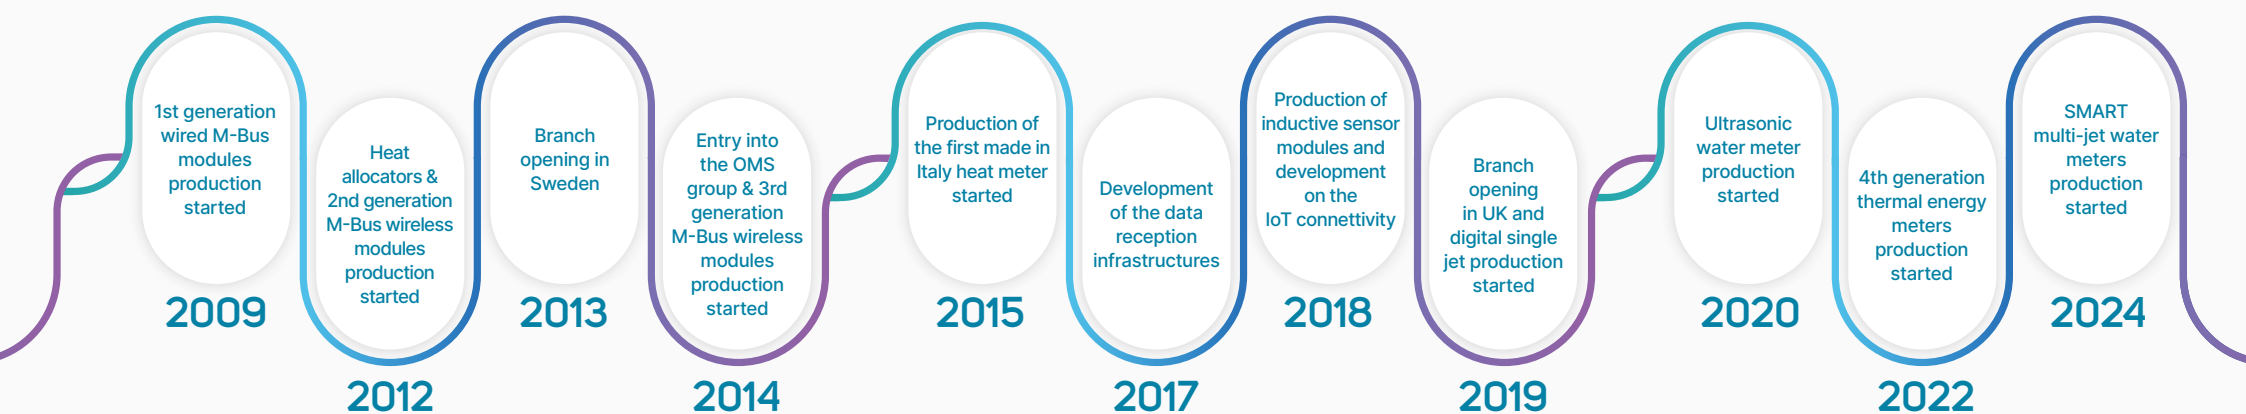

## Improvement

## A forward-looking perspective

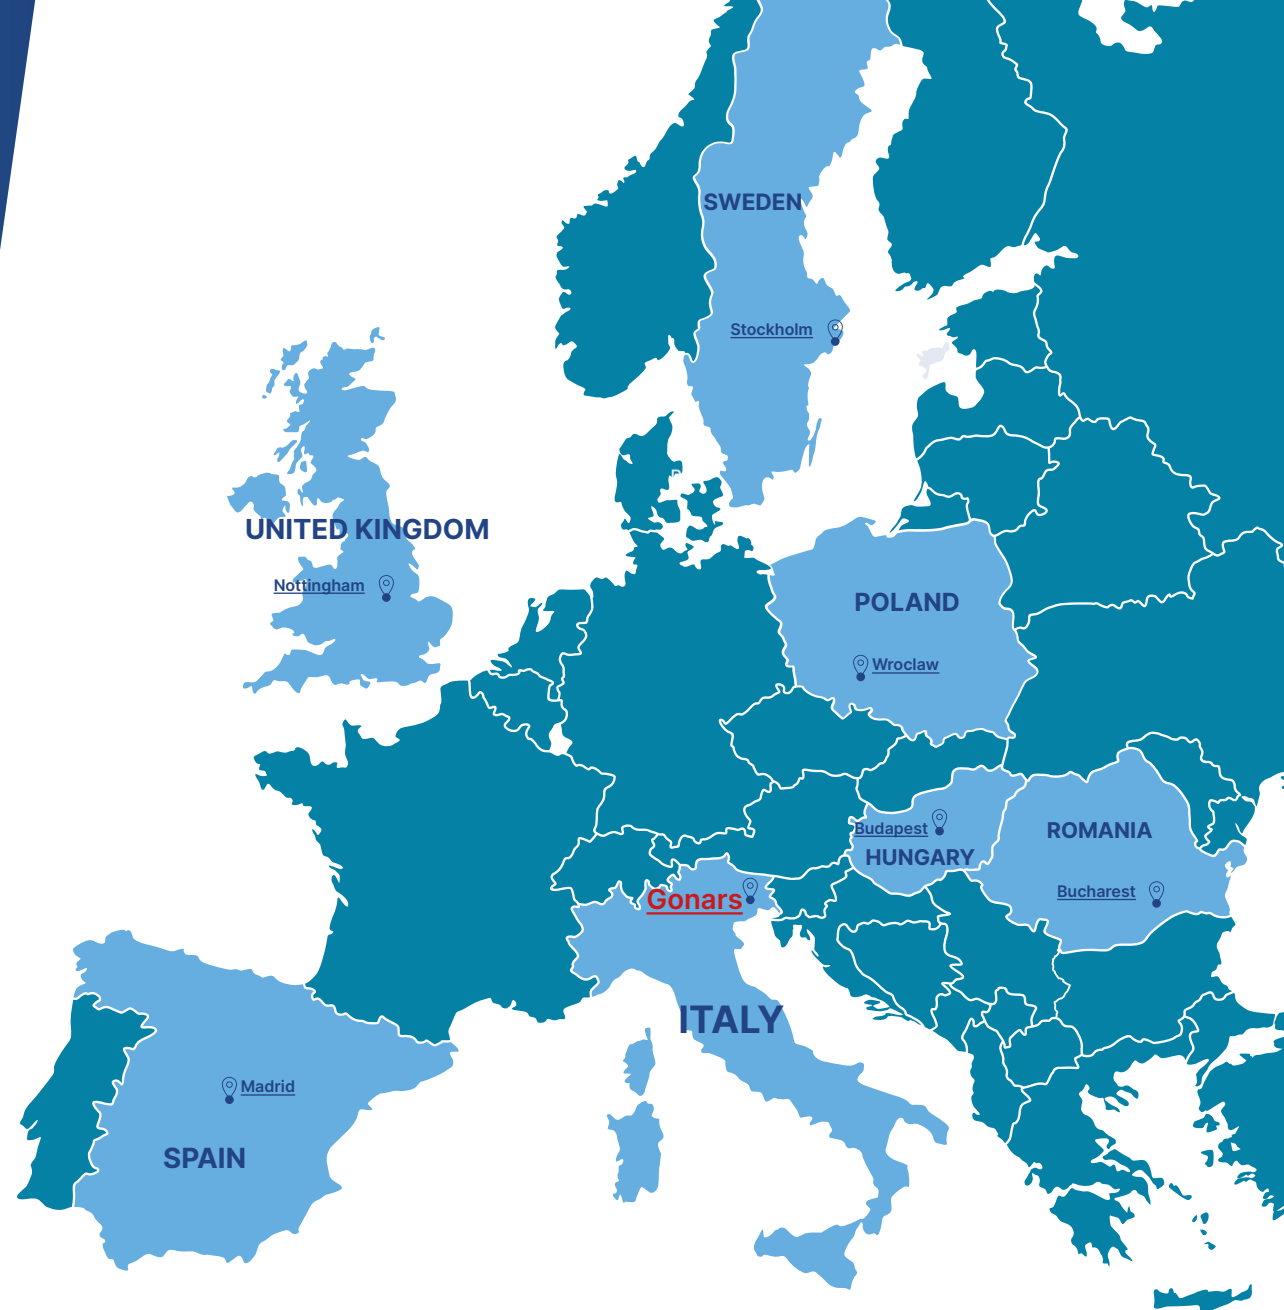

For over 30 years, we have been developing innovative and user-friendly products, integrated solutions, and remote reading systems for water and heat metering, all at competitive conditions.

We are 100% Italian.  
We carry within us the culture of quality manufacturing and design, as well as the ability for customization and managing complexity.

We want to be a key independent player in today's market and in the smart cities of tomorrow.

Thanks to our know-how, experience, and Italian tradition, we are now positioned as a key player in both the national and European markets.

**Italian Cleverness** — European dimension

# B METERS workflow — Integration and innovation

A proprietary and exclusive method, the integration of the entire production process, 5 steps to achieve excellence. From personalized analysis of the customer's needs to the full implementation of the product in the network, our virtuous cycle is completed with a precise, timely, and widespread assistance and monitoring service.

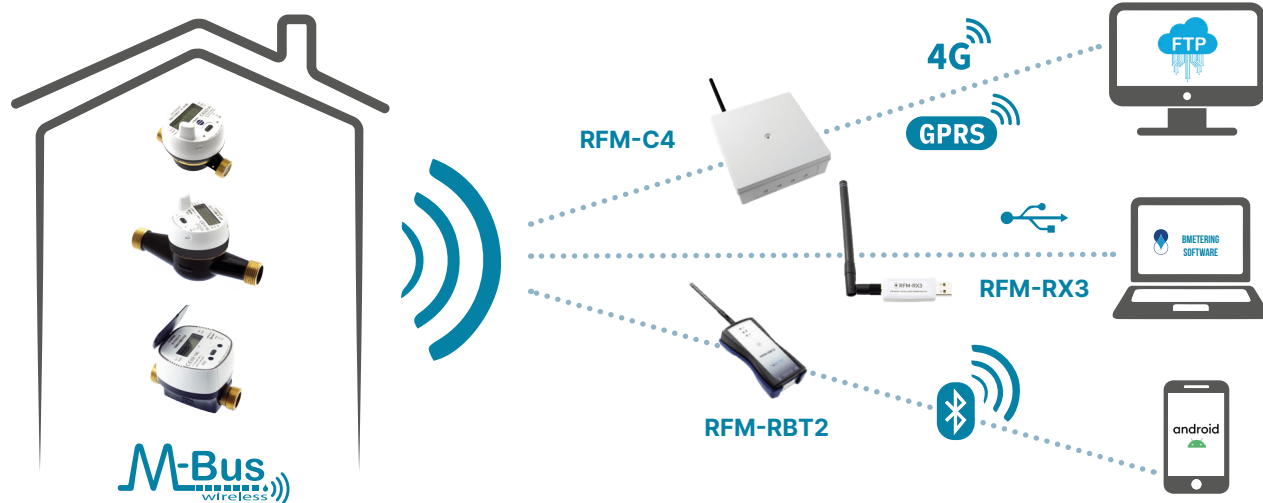

This allows us to understand not only immediate needs but also long-term expectations, creating lasting projects. Moreover, each phase of the production process is orchestrated with utmost precision, ensuring complete synergy between technology, human resources, and innovation.

# B METERS solutions

Integrated intelligence for today's and tomorrow's need

Our customers' needs—ranging from individual private users to large service companies and industries—reflect the growing demand to operate in an increasingly connected world, where resource control and waste reduction have become key priorities. Thanks to our integrated, technologically advanced solutions, consumption data can be measured, recorded, and transmitted with exceptional clarity and efficiency. We also provide tools that give customers access to detailed readings, essential for in-depth analysis and optimized resource management. But our innovative infrastructure goes even further: it enables customers, without any manual intervention, to offer end users additional services such as consumption monitoring, automated billing management, and the activation of alert systems for potential leaks. A complete solution, designed to enhance efficiency and simplify resource management.
