ENabling FLexibility provision by all Actors and sectors through markets and digital TEchnologies

ENFLATE is set to contribute to the advancement of the European Green Deal's objectives and foster innovation in the energy sector. ENFLATE recognizes the pivotal role ofelectricity networks in achieving 55% reduction in greenhouse gas emissions by 2030 and acknowledges the need for grid enhancements to handle the variable power flows from renewable energy generation as a key step in this direction.

ENFLATE's emphasis is on demand flexibility by optimizing energy consumption, particularly in sectors where electricity is a major player, it significantly contributes to emissions reduction. Its target goal of incentivizing and engaging consumers in flexibility provisioning is essential for their active participation in the broader energy transition.

ENFLATE's focus on market innovation, including the exploration of transactive marketplaces and the promotion of local energy communities, aligns with the evolving dynamics of energy markets and encourages consumers to participate in its efforts.

Join ENFLATE in its efforts and support Europe's journey towards a socially fair and sustainable energy transformation on the path to climate neutrality by 2050.
