EU project area

Meet the Belgian Energy Innovators at Enlit Europe 2025 in Bilbao!

Once again, **Flux50** and **Cluster TWEED** join forces to present a strong and forward-thinking **Belgian delegation** at **Enlit Europe 2025**, the leading European gathering for the energy community.

Enlit Europe is more than just an exhibition - it's where **innovation, collaboration, and inspiration** come to life. Belgium's energy ecosystem will be there to showcase cutting-edge technologies and solutions driving the **energy transition** across Europe and beyond.

Visit the Belgian Pavilion to:

- Discover **innovative companies** shaping the future of energy
- Connect with research **centers, clusters, and industry leaders** from Belgium
- Explore **partnership and investment opportunities** in renewable energy, smart grids, hydrogen, and more
- **Pitch'n Beer**: take part in networking moments, including our friendly Pitch'n Beer on Wednesday at 3:30 pm — where innovation meets conviviality!
- Join **cross-border exchanges** facilitated in collaboration with clusters and organizations from the **Basque Country, France, the Netherlands**, and other European regions

THE DELEGATION

EU-funded Every1 fosters inclusive participation in the digital energy transition by building knowledge, accessible learning, and collaboration among citizens, policymakers, and industry. Working with energy communities, authorities, and EU partners, it shares best practices and co-develops tools to boost knowledge and cooperation across the sector.

Cbattery is Belgian B2B manufacturer offering ultra-safe, connected, and intelligent stationary and mobile storage systems for indoor or containerized outdoor use. With open compatibility to EMS and inverter brands, our solutions evolve over time to fit new business needs, ensuring flexibility, innovation, and sustainability.

CETWA is a network of Walloon actors in innovation in the field of energy technologies and energy communities. CETWA was created as part of the Smart Specialization Strategy in Wallonia. It aims at supporting and organizing R&D&I collaborative activities to foster economic development and to accelerate the Regional Energy transition.

Shaping tomorrow's energy!

EnergyVille unites KU Leuven, VITO, imec & UHasselt to drive smart, sustainable solutions. With 700 experts and top facilities at Thor Park, we cover the full energy chain. On Enlit we spotlight our research lines electrical networks and energy strategies & markets for a greener future.

Jetpack.AI helps DSOs tackle grid challenges with Strata — a simulation and machine learning platform that models energy demand on a digital twin. It enables users to assess electrification impacts, visualize peaks, and anticipate grid needs for smarter planning and operations.

Verity is a cloud-native SaaS platform that delivers robust financial transactions and insights using high-granular, real-time data. Our modular, API-first platform enables seamless integration with existing systems, supporting dynamic tariffs, customer insights, and demand flexibility—without the need for a full system replacement

Vinci Energies, through its brands Cegelec, Omexom, and Actemium, supports stakeholders in the energy and industrial sectors in driving the energy transition. With deep expertise in electrical networks, automation, and digitalization, we assist energy producers, transmission and distribution system operators, and consumers in overcoming their daily challenges.

Energytix.cloud enables real-time energy monitoring, simulation and smart control at individual connection points or across energy communities—driving efficiency, load balancing and sustainability through scalable, data-driven insights.

Ferranti empowers utilities worldwide with MECOMS 365, a powerful Microsoft Dynamics 365-based platform for customer care, billing, and meter data management. It drives digital transformation, efficiency, and customer satisfaction in the energy and utilities sector.

N-SIDE partners with System Operators and Power Exchanges, delivering high-reliability market-clearing and grid optimization solutions. We combine software and advisory services to enable informed, data-driven decisions and seamless, transparent implementation with robust, lasting results.

Flux50 is the spearhead cluster for energy. We are a key facilitator for innovative energy projects in Flanders, which we carry out together with more than 230 members. Our ecosystem forms a unique platform where the different actors of the energy transition come together. Internationally Flux50 positions Flanders as a Smart Energy Region.

The TWEED Cluster (Walloon Energy, Environment and Sustainable Development Technology) is a Walloon organisation bringing together more than 200 companies active in the sustainable energy sector. The Cluster is committed to playing a major role in business in the renewable energy and energy optimisation sectors.
