

CHAPTER 10

Congruence and similarity

Recognising congruent triangles

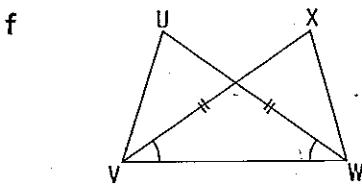

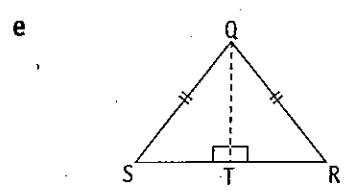

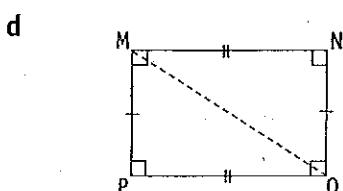

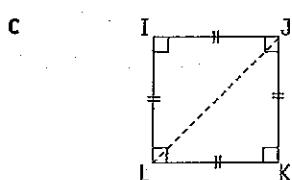

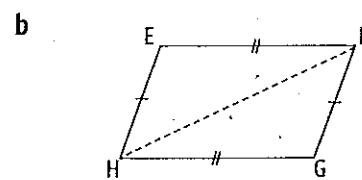

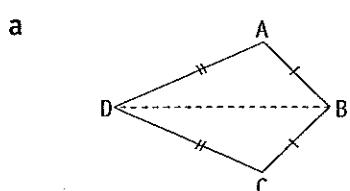

QUESTION 1 Name pairs of congruent triangles.

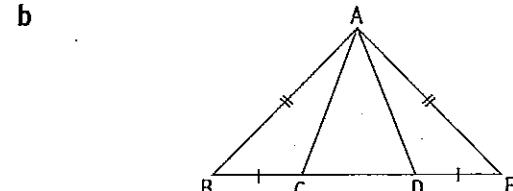

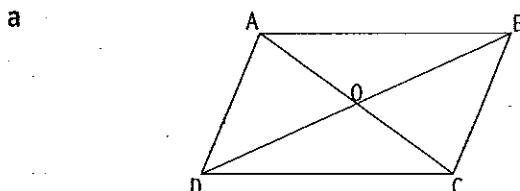

QUESTION 2 In the following pairs of congruent triangles:

i name all pairs of corresponding angles

ii name all pairs of corresponding sides

QUESTION 3 In the following shapes, name different pairs of congruent triangles.

Congruence and similarity

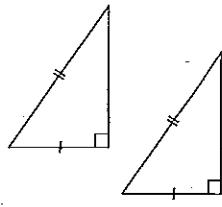

Tests for congruent triangles

QUESTION 1 Complete the following statements.

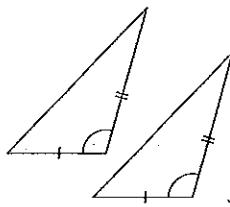

- The symbol for congruent triangles is _____.
- Two triangles are congruent if three sides of one triangle are equal to _____ of the other triangle.
- Two triangles are congruent if two angles and a side of one triangle are equal to _____ of the other triangle.
- Two triangles are congruent if two sides and the included angle of one triangle are equal to _____ of the other triangle.
- Two right-angled triangles are congruent if the hypotenuse and one side of one triangle are equal to _____ of the other triangle.

QUESTION 2 In each pair of triangles, write the congruence test that would be used to prove that the triangles are congruent.

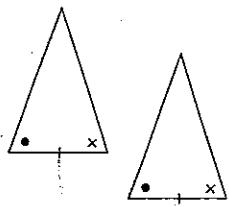

a

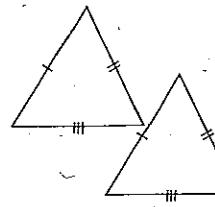

b

c

d

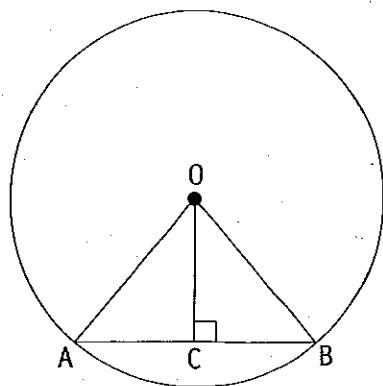

QUESTION 3 In the diagram, O is the centre of the circle. OC is drawn perpendicular to AB, in other words $OC \perp AB$.

- Name the common side in $\triangle OAC$ and $\triangle OBC$.

- Name the pair of sides that are equal.

- Are the triangles congruent?

- If they are congruent, name the test you can use to prove it.

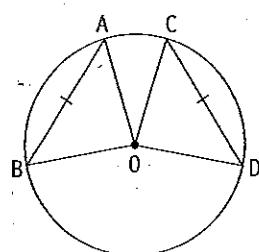

Congruence and similarity

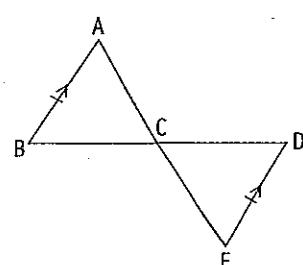

Proofs for congruent triangles

QUESTION 1 In each pair of triangles, prove that the triangles are congruent.

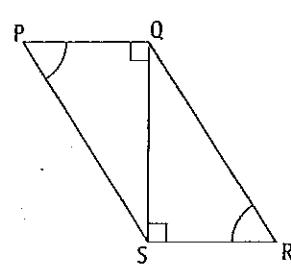

a

b

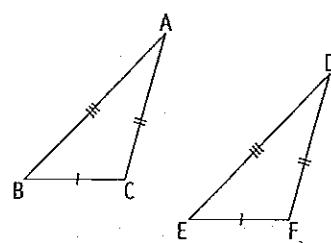

c

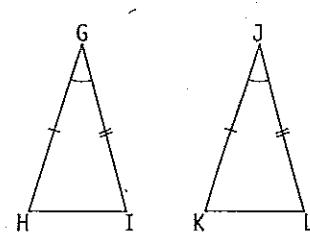

QUESTION 2 Prove that each pair of triangles are congruent.

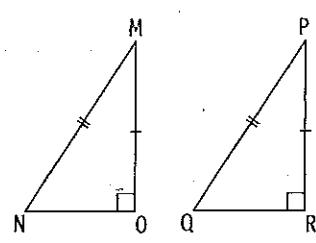

a

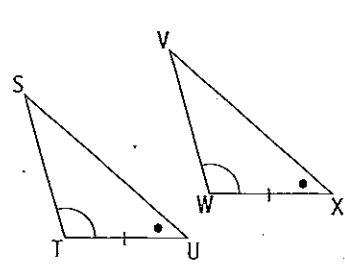

b

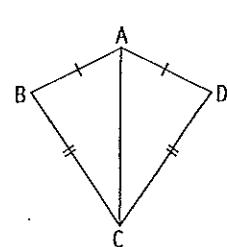

c

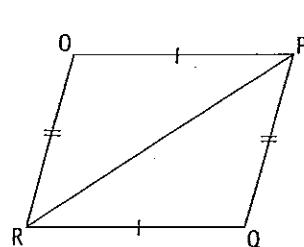

d

e

f

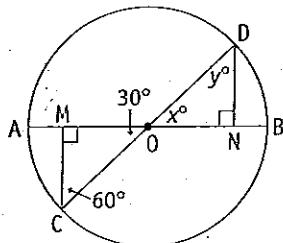

Congruence and similarity

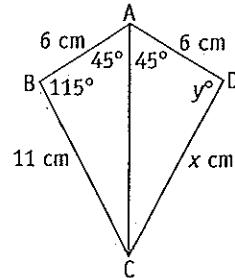

Using congruent triangles to find unknown sides and angles

QUESTION 1 Prove that each pair of triangles are congruent and then find the value of the pronumeral.

a

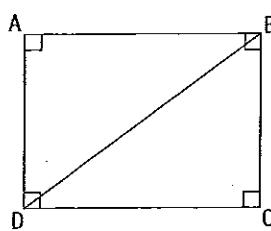

b

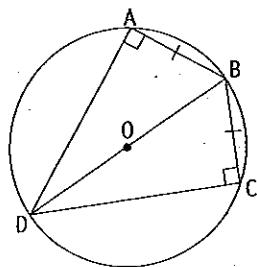

QUESTION 2

- a ABCD is a rectangle.
Prove that $\triangle DAB \cong \triangle DCB$

- b O is the centre of the circle and $AB = BC$.
Prove that $\triangle ABD \cong \triangle CBD$

Congruence and similarity

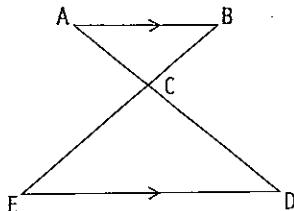

Tests for similar triangles

QUESTION 1 Complete the following statements.

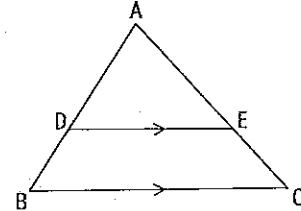

- The symbol for similar triangles is _____.
- Two triangles are similar if two angles of one triangle are equal to _____ of the other triangle.
- Two triangles are similar if their corresponding sides are in the _____.
- Two triangles are similar if one angle of one triangle is equal to _____ of the other and the lengths of the sides that form the angle are in the _____.
- All similar triangles may or may not be _____ triangles.

QUESTION 2 In each diagram, write the test for similarity that would be used to prove that the triangles are similar.

a

b

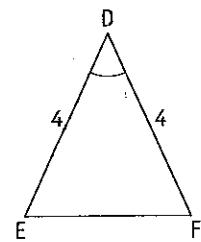

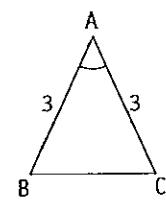

QUESTION 3 The triangles shown are similar triangles.

- Write the test used for similar triangles.

- List the pairs of corresponding angles.

- List the pairs of corresponding sides.

Congruence and similarity

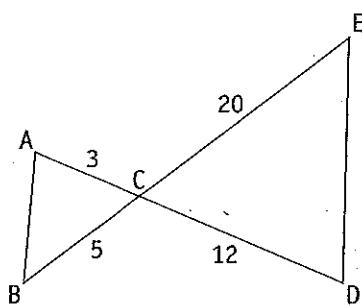

Proving that triangles are similar

QUESTION 1 For the following statements, write true or false.

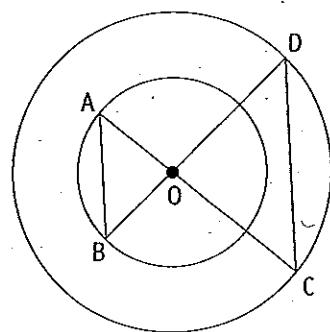

- a All congruent triangles are similar. _____
- b All similar triangles are congruent. _____
- c All scalene triangles are similar. _____
- d All acute-angled triangles are similar. _____
- e All obtuse-angled triangles are similar. _____
- f All right-angled triangles are similar. _____
- g All isosceles triangles are similar. _____
- h All equiangular triangles are similar. _____

QUESTION 2 In each diagram, prove that the triangles are similar.

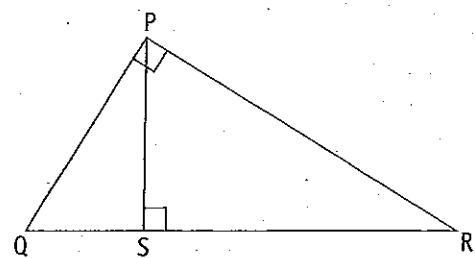

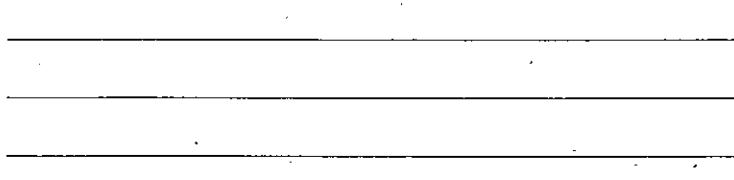

a

b

QUESTION 3 Name three similar triangles in the diagram.

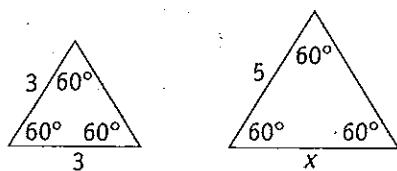

Congruence and similarity

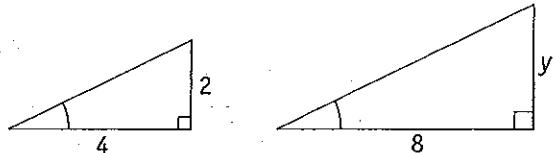

Using similar triangles to find the value of the pronumerals

QUESTION 1 In each diagram, use a test of similarity to find the value of the pronumeral.

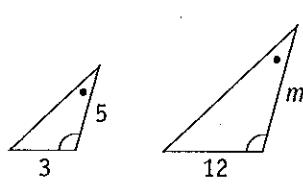

a

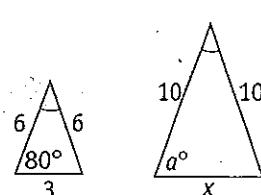

b

c

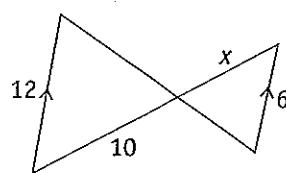

d

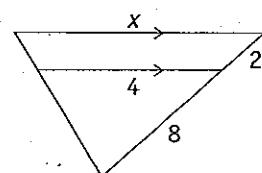

QUESTION 2 In each diagram, use a test of similarity to find the value of the pronumeral.

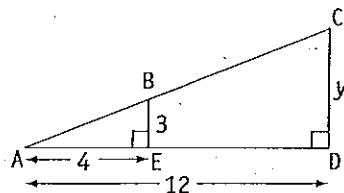

a

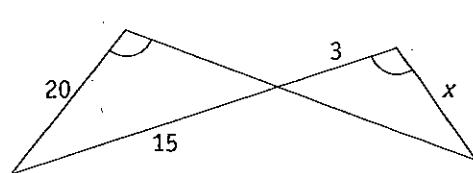

b

c

d

Congruence and similarity

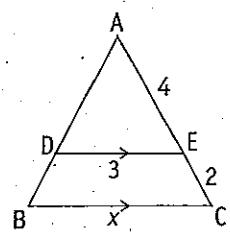

Problem solving with congruency and similarity

- 1 In $\triangle ABC$, DE is parallel to BC.

a Name the test used for similar triangles.

b Write the ratio of the corresponding sides.

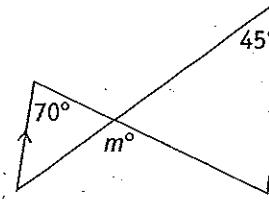

c Find the value of x .

- 2 In the diagram on the right:

a Name the test used for similar triangles.

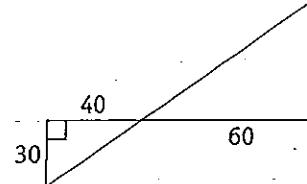

b Find the value of m .

- 3 In the diagram:

a Name the test used for similar triangles.

b Find the value of y .

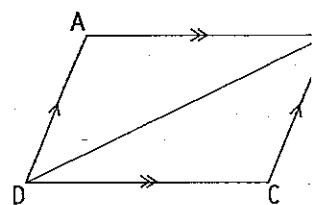

- 4 In the diagram given:

a Name the common side.

b Name the two pairs of angles that are equal.

c Is $\triangle ABD \cong \triangle CDB$?

d Name the test you can use to prove it.

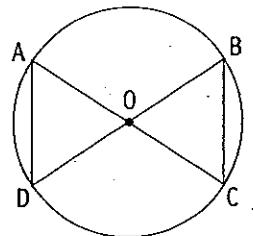

- 5 O is the centre of a circle with radius 12 cm.

a Name all the lines that are 12 cm long.

b Name an angle equal to $\angle AOD$.

c Prove that $\triangle AOD \cong \triangle BOC$

Congruence and similarity

TOPIC TEST

PART A

- Instructions**
- This part consists of 15 multiple choice questions
 - Fill in only ONE CIRCLE for each question
 - Each question is worth 1 mark
 - Calculators may be used

Time allowed: 15 minutes

Total marks = 15

	Marks
1 The symbol for congruent triangles is (A) \equiv (B) \cong (C) $\ $ (D) $=$	1
2 The symbol for similar triangles is (A) \equiv (B) \cong (C) $\ $ (D) $=$	1
3 All congruent triangles are (A) equilateral (B) isosceles (C) similar (D) right-angled	1
4 In congruent triangles the lengths of the corresponding sides are (A) equal (B) different (C) in ratio 1:2 (D) none of these	1
5 When two triangles are congruent, their corresponding angles are (A) different (B) same size (C) in ratio 1:2 (D) none of these	1
6 Two triangles are congruent if they are of the (A) same shape (B) same area (C) same shape and size (D) none of these	1
7 All similar triangles are (A) different (B) congruent (C) equilateral (D) equiangular	1
8 A diagonal of a rhombus divides the rhombus into two triangles that are (A) equilateral (B) isosceles (C) congruent (D) none of these	1
9 Two triangles are similar if they have the (A) same shape (B) different shape (C) same area (D) different area	1
10 The longer diagonal of a kite divides it into two triangles that are (A) isosceles (B) equilateral (C) congruent (D) none of these	1

-
- 11** The two diagonals of a square divide it into four triangles that are
 (A) isosceles (B) equilateral (C) congruent (D) none of these
- 12** If the corresponding angles of two triangles are equal, the triangles are definitely
 (A) congruent (B) similar (C) isosceles (D) equilateral
- 13** If the corresponding sides of two triangles are in the same ratio, the triangles are definitely
 (A) congruent (B) similar (C) isosceles (D) equilateral
- 14** In two triangles, if the corresponding sides and the included angles are equal, the triangles are
 (A) congruent (B) similar (C) isosceles (D) equilateral
- 15** In two triangles, if the corresponding sides are in the same ratio and the included angles are equal, the triangles are definitely
 (A) congruent (B) similar (C) isosceles (D) equilateral
-

Total marks achieved for PART A

Congruence and similarity

TOPIC TEST

PART

- Instructions**
- This part consists of 15 questions
 - Each question is worth 1 mark
 - Write answers in the 'Answers only' column

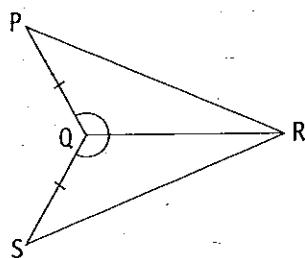

Time allowed: 15 minutes

Total marks = 15

Questions

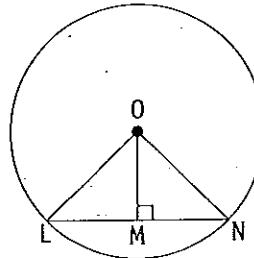

Look at the diagram to the right.

- Name the pairs of equal sides.
- Name the pairs of equal angles.
- Name triangles that are congruent.
- State the congruence test.

Look at the diagram to the right.

- Name the pairs of equal sides.
- Name the pairs of equal angles.
- Name triangles that are congruent.
- State the congruency test.

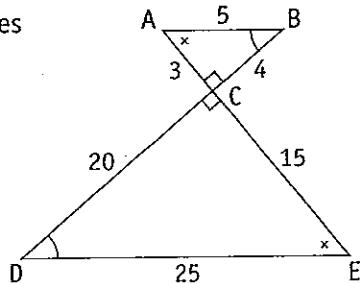

Look at the diagram to the right.

- Name the pairs of corresponding angles that are equal.

10 Find the ratios $\frac{AB}{DE}$, $\frac{AC}{CE}$ and $\frac{BC}{CD}$

11 Does $\frac{AB}{DE} = \frac{AC}{CE} = \frac{BC}{CD}$

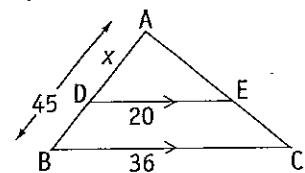

- Are the triangles similar?

- State the test that proves similarity.

Look at the diagram to the right.

- State the test that proves similarity.

- Find the value of x.

Answers only

Mark

Total marks achieved for PART B

Congruence and similarity

TOPIC TEST

PART C

- Instructions**
- This part consists of 4 questions
 - Each question is worth 5 marks
 - Show all necessary working

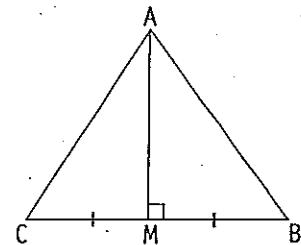

Time allowed: 20 minutes

Total marks = 20

- 1** Complete the congruent triangles proof to show $\triangle ABM \cong \triangle ACM$

In $\triangle ABM$ and $\triangle ACM$

By test

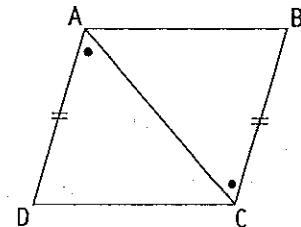

Marks

5

- 2 a** Prove that $\triangle ABC \cong \triangle CDA$

- b Hence, prove $AB \parallel DC$

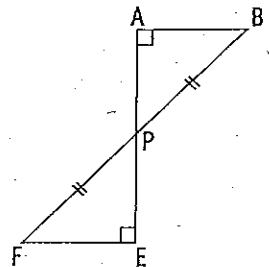

5

- 3** AE and BF intersect at P. $PF = PB$, $\angle PAB = 90^\circ$ and $\angle PEF = 90^\circ$

- a Aim: To prove that $AP = PE$

Proof:

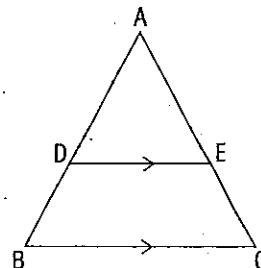

5

- 4 a** Prove that $\triangle ABC$ is similar to $\triangle ADE$

- b State the test.

- c Hence, write the ratio of the corresponding sides.

5

Total marks achieved for PART C
