(b) Point X is due south and point Y is due west of the foot F of a mountain TF of height h . From X and Y, the angle of elevation of the top of the mountain T are 35° and 43° respectively.

(i) Show that $XF = h \tan 55^\circ$ and $YF = h \tan 47^\circ$. [2]

(ii) If X and Y are 1200 metres apart, show that the height h of the mountain is given by the formula: [3]

$$h = \frac{1200}{\sqrt{\tan^2 55^\circ + \tan^2 47^\circ}}$$

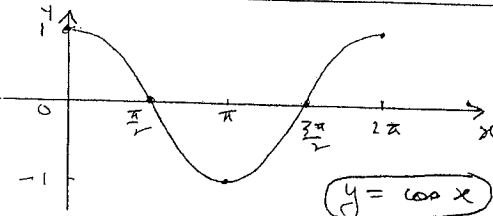

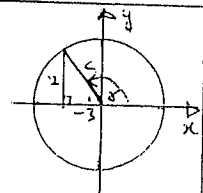

(c) In ΔABC , $\angle BAC = 60^\circ$. Prove that $a^2 - b^2 = c(c - b)$. [4]
