We need R such that
$$50000 R^{20} - 8000 \left(\frac{R^{20} - 1}{R - 1} \right)$$
Test $r = 10\%$ is $R = 1 \cdot 1$

Test
$$r = 10\%$$
 is $R = 1 \cdot I$
 $50000R^{20} - 8000 \left(\frac{R^{20} - I}{R - I} \right) \approx -121825 \cdot 00$

Test
$$r = 14\%$$
 is $R = l \cdot 12$ $\approx -41024 \cdot 93$.

Test
$$r = 15\%$$
 ie $R = 115$

$$50000 R^{20} - 8000 \left(\frac{R^{20} - 1}{R} \right) \approx -1221.79$$

Test
$$r = 16\%$$
 is $\Re I = 189$ To 16% So 16%

So 15% pa is the required interest rate.

NB As a point of interest a more exact answer is:

 $R = 1.150269696 \Rightarrow r = 15.0269696968$
