HIGHER SCHOOL CERTIFICATE TRIAL EXAMINATION

Mathematics Extension |

This is a TRIAL PAPER only and does not necessarily reflect the content or format of the Higher School Certificate Examination for this subject.

General Instructions

- Reading time 5 minutes
- Working time 2 hours
- · Write using black or blue pen
- Board-approved calculators may be used
- A table of standard integrals is provided at the back of this paper
- All necessary working should be shown in every question

Total marks - 84

- Attempt Questions 1–7
- · All questions are of equal value

Total marks – 84 Attempt Questions 1–7 All questions are of equal value

Answer each question in a SEPARATE writing booklet. Extra writing booklets are available.

Marks

Question 1 (12 marks) Use a SEPARATE writing booklet.

- (a) Evaluate $\lim_{h \to 0} \frac{\tan \frac{h}{2}}{h}$
- b) Find all the real values of a for which $P(x) = ax^3 8x^2 9$ is divisible by (x a).
- (c) Find the domain and range of $y = 5\sin^{-1}\left(\frac{x}{3}\right)$
- (d) Solve for x: $\frac{x}{x+2} \ge 3$
- (e) Use the substitution $u = \sqrt{x}$ to find:

$$\int \frac{dx}{(1+x)\sqrt{x}}$$

(f) In New South Wales, new number plates consist of two letters followed by two digits followed by another two letters. Repetition is allowed. How many different number plates are possible?

Higher School Certificate Trial Examination, 2008 Mathematics Extension 1 page 2

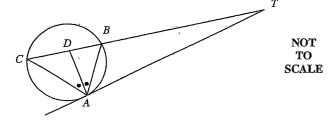

Question 2 (12 marks) Use a SEPARATE writing booklet.

- (a) A curve has parametric equations x = t 1, $y = 1 t^2$ 2

 Find $\frac{dy}{dt}$ for this curve.
- (b) (i) Write $\cos x + \sin x$ in the form $A\cos(x-\alpha)$, where A > 0 and $0 \le \alpha \le \frac{\pi}{2}$.
 - (ii) Hence sketch the curve $y = \cos x + \sin x$ for $0 \le x \le 2\pi$.

 Label clearly where the curve intersects the x and y-axes.
 - (iii) Hence, find the general solution to $\cos x + \sin x = 1$.
- A circle passes through the points A, B and C.
 TA is a tangent to the circle at A.
 D is a point on the secant TBC such that DA bisects ∠BAC.

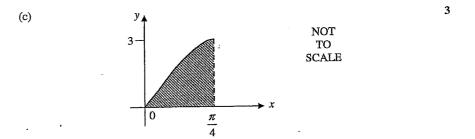

Prove that TA = TD.

Question 3 (12 marks) Use a SEPARATE writing booklet.

- Differentiate $(5\cos^{-1} 4x)$
- Point P(5, -2) divides the interval AB externally in the ratio k:1.

 If A is the point (-1, 7) and B is the point (3, 1), find the value of k.

The shaded region bounded by $y = 3\sin 2x$, the x-axis and the line $x = \frac{\pi}{4}$ is rotated about the x-axis to form a solid of revolution.

Find the volume of the solid formed.

- (d) Tonight for dinner, mum is making a lamb roast. The leg of lamb is cooked in the oven at 180° C. Before carving the lamb, mum takes it from the oven and places it on a tray in a kitchen with a room temperature of 24° C.
 The lamb cools at a rate given by dT/dt = k(T-24), where T is the temperature of the lamb in degrees Celsius after t minutes and k is a constant.
 - Show that $T = 24 + Ae^{kt}$ satisfies the differential equation.
 - (ii) If the temperature of the lamb falls to 160° C after 5 minutes, find the value of A and k.
 - (iii) Mum waits until the temperature of the lamb is 140° C before carving it. How long does she have to wait after she takes it out of the oven?

Question 4 (12 marks) Use a SEPARATE writing booklet.

- (a) Find the size of the acute angle, to the nearest minute, between the tangents to the curve $y = e^{2x}$ at the points where x = 0 and x = 1.
- (b) Liam is playing with five blocks labeled with different letters A, B, C, D, E. He stacks three, four or five blocks on top of one another to form a vertical tower.
 - (i) How many different towers could Liam form that are three blocks high?
 - (ii) How many different towers can Liam form in total?
 - (iii) How many five letter towers could Liam make that contain the word BED, when read from top to bottom?
- (c) For her birthday, Betsy has decided to go skydiving. She jumps out of a plane and by the time she reaches the position, *P*, *h* metres above the ground, she is falling at a constant rate of 200 kmh⁻¹.

The point X is on horizontal ground directly below the point P. Her son, Cooper, is standing at point C, 100 metres from X. The angle of elevation of P from C is θ radians.

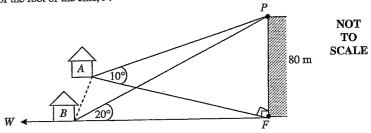

- (i) Show that $\frac{dh}{d\theta} = \frac{100}{\cos^2 \theta}$.
- (ii) Find the rate of decrease of the angle of elevation when Betsy reaches a height of 2000 metres.

 (Answer in radians/second correct to 2 significant figures.)

Question 5 (12 marks) Use a SEPARATE writing booklet.

(a) From a lookout in the Blue Mountains on top of a vertical cliff, *P*, which is 80 m high, the angles of depression of two farmhouses in the Megalong Valley below are observed to be 10° and 20° respectively.

The first farmhouse, A, is northwest and the second farmhouse, B, is due west of the foot of the cliff, F.

- (i) Using $\triangle BPF$, show that $BF = 80 \tan 70^{\circ}$.
 - Show that the distance between the farmhouses 2

$$AB = 80 \sqrt{\tan^2 80^\circ + \tan^2 70^\circ - 2 \tan 80^\circ \tan 70^\circ \cos 45^\circ}$$

- (iii) Hence, find AB correct to the nearest metre.
- Use mathematical induction to prove that for all positive integers, n 3

$$\sum_{r=1}^{n} (2r-1)^2 = \frac{n(2n-1)(2n+1)}{3}$$

- Question 6 (12 marks) Use a SEPARATE writing booklet.
- The diagram below shows a sketch of y = f(x), where $f(x) = \sqrt{x+3}$.

- Copy or trace the diagram. On the same set of axes, sketch the graph of the inverse function $y = f^{-1}(x)$.
- (ii) State the domain of $f^{-1}(x)$ 1
- (iii) Find an expression for $y = f^{-1}(x)$ in terms of x.
- (iv) The graphs of y = f(x) and $y = f^{-1}(x)$ meet at exactly one point P. 1 Let α be the x-coordinate of P. Explain why α is a root of the equation $x - \sqrt{x+3} = 0$.
- Take 2.5 as a first approximation for α . Use one application of Newton's method to find a second approximation for α . (Give your answer correct to 3 decimal places.)
- (vi) By rewriting $x \sqrt{x+3} = 0$ as a quadratic equation, find 2 the exact coordinates of P.
- The polynomial $P(x) = 2x^3 + 3x^2 + kx 2$ has roots α , β and γ .
 - 1 Find the value of $\alpha\beta\gamma$.
 - If one root is the reciprocal of the other, find the third root and, hence, 3 find the value of k.

- In the expansion of $(1+x)^n$, the coefficients of x, x^2 , x^3 form an AP.
 - Explain why

 $2\binom{n}{2} = \binom{n}{1} + \binom{n}{3}$

Hence, show that

 $n^3 - 9n^2 + 14n = 0$

(iii) Hence, find the value of n that satisfies the above condition to form an AP.

End of Question 5

Ouestion 7 (12 marks) Use a SEPARATE writing booklet.

(a) After a soccer match, all eleven players must return to school.
 One of the players, Lucy, owns a car and takes four passengers with her.
 The remaining players must return by bus.
 Twins, Emma and Rachel, must return to school together.

How many different groups of five players (including Lucy) can return to school by car?

(b)

NOT TO SCALE

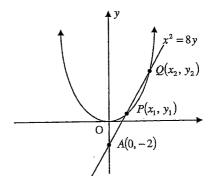

In the diagram, DC is a diameter and AB is a chord perpendicular to DC. Chords CP and CQ cut AB at H and K respectively.

Prove that HKQP is a cyclic quadrilateral.

Question 7 continues on page 10

Ouestion 7 (continued)

The line *l* through the point A(0, -2) with slope *m* meets the parabola $x^2 = 8y$ at the points $P(x_1, y_1)$ and $Q(x_2, y_2)$.

- (i) The line *l* has equation y = mx 2. Show that x_1 and x_2 are the roots of the equation $x^2 - 8mx + 16 = 0$.
- (ii) Using the fact that $(x_2 x_1)^2 = (x_2 + x_1)^2 4x_1x_2$ and using the sum and product of the roots x_1 and x_2 , show that $(x_2 x_1)^2 = 64(m^2 1)$.
- (iii) Hence, show that $PQ^2 = 64(1+m^2)(m^2-1)$.
- (iv) Find the values of m for which line l is a tangent to the parabola $x^2 = 8y$.
- (v) $\triangle SPQ$ is formed where S is the focus (0, 2). 2 Show that the exact area of $\triangle SPQ$ is $16\sqrt{m^2-1}$ units².

End of paper

avestioni lim tan I 470 = ½ hao

(Q1) in general was very poorly done. It's meant to be easy. If you struggled, you need to learn your work better because expect similar thungs in the HSC.

(b) divisible by (2-a) 1. P(a)=0 $P(x) = ax^3 - 8x^2 - 9$ $P(a) = a^4 - 8a^2 - 9$

> a4-8a2-9=0 (=0) $(a^2 + 1)(a^2 - 9) = 0$

 $a^2 = -1$ $a^2 = 9$

You should recognise 7 that this is a quadratic. > A basic Du question to solve this now.

No real soln a= ±3

 $y = 5 \sin^{-1}\left(\frac{x}{3}\right)$

domain -15 x 51

-3 ≤ x ≤ 3 ✓

A very easy standard question. If you couldn't do this, you really need to do more practice of inverse tria. functions.

undefined for x=-2

2 x (2+2)2 > 3(x+2)2

 $x(x+2) > 3(x+2)^{2}$ $0 > 3(x+2)^{2} - x(x+2)$ factorise $(x+2)\left[3(x+2)-x\right]\leq 0$ $(x+2) \left[3x + 6 - x \right] \leq 0$

(x+2) (2x+6) 50 $2(x+2)(n+3) \leq 0$

-3 5x < -2

Solution -3 \ x < -2

Don't forget this undefined value.

— Itadorising here is easier Then expanding

> You wangest a mark for correct solution of your quadratic inequality.

u= vox J (1+x) 52 $x = u^2$

 $= \int \frac{2udu}{(1+u^2)} u$ dx = 2u.du $= \int \frac{2}{1+u^2} du$

= 2 tan u+C = 2 tan 152 + C/

26×26 ×10× 10× 26×26 $= 26^4 \times 10^2$

July easy from this point on . LOOK AT THE STANDARD INTEGRALS. Why didn't you use than &

There are 26 letters in the alphabet.

10236 -21 < A < 21 √

Question 2 Comm /3, Reas /5

(a)

x=t-1 $y=1-t^{2}$ dy=-2t

 $\frac{dy}{dn} = \frac{dy}{dt} \times \frac{dt}{dn}$ $= -2t \times 1$ = -2t = -2(x+1) $0)^{2} \quad y = 1 - (x+1)^{2} \quad \sqrt{ }$

 $\frac{dy}{dn} = -2(n+1) \sqrt{\frac{n}{n}}$

Oops! This should have been calc.

This is a standard question & reasonably well done.

There were some strange attempts to incorporate $x^2 = 4ay!?!$

b) i) A cos (x-d) = A cosx cos a + A sui x sui d = cosx + sui x

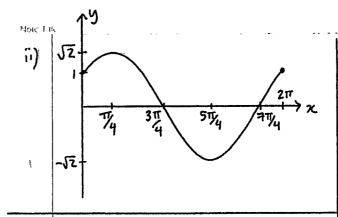

Match coefficients

Acost=1 (1) Asind=1 (2)

Finds $2\sqrt{1}$ $\begin{array}{c|c}
\hline
Finds & A \\
\hline
+ and = 1 \\
d = 1/4
\end{array}$ $\begin{array}{c|c}
Find A \\
A^2 = 1^2 + 1^2 \\
A = \sqrt{1+1} \\
= \sqrt{2}
\end{array}$

 $\therefore \cos x + \sin x = \sqrt{2} \cos \left(x - \frac{\pi}{4}\right)$

part (i) was well done but the sketch in (ii) & the openeral solution in (iii) not so.

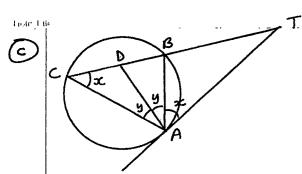

Comm 3

iii) $\cos x + \sin x = 1$ $\sqrt{2} \cos (x - \sqrt{4}) = 1$ $\cos (x - \sqrt{4}) = \sqrt{2}$ $x - \sqrt{4} = \pm \sqrt{4} + 2n\pi$, ne $\sqrt{2}$ $x = \sqrt{2} + 2n\pi$, $2n\pi$

Reas 2

This is a simple general solution that could even be read, or at the least checked, from the sketch in (ii)

LTAB = LACB = X

(angle between tengent and chard is

equal to angle in alternate segment.)

DA bisects LBAC LCAD = LBAD = y

LTDA = L DCA+L DAC

(Exterior L of a D=Sum of 2 opposite smile ior Ls.)

LOAT = LOAB+LBAT = Xty

LTDA = LDAT

TD = TA

Equal sides opposite equal angles

in an isosceles b are equal.)

Reas 3

It is always a good idea to reproduce the diagram on your answer page.

Also too many people are introducing new letters here there & everywhere and you can't expect the marker to be able to read your mind. If you are going to call something 'E' have it on your diagram or explain where it is!

And be very careful of typos! They can & will lose you marks.

Question 3.

Cake 16 Rear/3

(a) y = 5 cos - 4x

$$y' = 5 \times \frac{1}{\sqrt{1 - (4x)^2}} \times 4$$

$$= \frac{-20}{\sqrt{1 - (4x)^2}}$$

du (cos-1 2) = 1108 2008

y'= -5 V16-22

Calc 2) Learn the rates !!

) (-1,7) 8(3,1) 2c P(5,-2)

You don't have to use any formulas if you do it this way.

 $AB = \int (3+1)^{2} + (1-7)^{2}$ $= \int 4^{2} + (6)^{2}$ $= \int 16 + 36$ $= \int 52$ $= 2\sqrt{13}$

works too.

$$PB = \sqrt{(5-3)^2 + (-2-1)^2}$$

$$= \sqrt{2^2 + -3^2}$$

$$= \sqrt{4+9}$$

$$= \sqrt{13}$$

AP: PB
3173; JT3
3:1
Pdivides AB externally
in the ratio 3:1

i. h=3

Rear 3

y=35 in 2x

About scasus.

$$V = \pi \int_{0}^{5} y^{2} dx$$

$$= \pi \int_{0}^{4/4} (3 \sin 2x)^{2} dx$$

$$= \pi \int_0^{\pi/4} 9 \sin^2 2\pi \, dn$$

$$= 9\pi \int_{0}^{4/4} \frac{1}{2} (1-\cos 4x) dx$$

$$= 9\pi \int_{0}^{4/4} x - \frac{1}{4} \sin 4x \int_{0}^{4/4} x dx$$

$$=\frac{9\pi^2}{8}$$

If you got this wrong you really don't know your work well enough.

Highlight key words.
You must motice
that it asks for
Volume not area.

Learn the rules and expect to use them.

$$\int \sin^2 x \, dx =$$

$$\int \cos^2 x \, dx =$$

(Care 3

(d)

satisfied i

A standard question Learn how to do it this way.

An easy mark.

(Cake

t=0 T=180°C t=5 T=160°C

Store this in your calculator.

when $T = 140^{\circ}$ C $140 = 24 + 156 e^{kt}$ $116 = 156 e^{kt}$ $e^{kt} = 116 = 156$ $kt = ln (\frac{116}{156})$ $t = \frac{1}{16} ln (\frac{116}{156})$

iu

tuse the stored value from your calculator t = 10.79677...

t = 10 min 48 sec

Very well done.

y=e220

when x=0 $m=2e^{0}$

when $x=1 m_2=2e^2$ Acute angle

i) 5x4x3 = 60 ways (d) 3 blocks = 5x4x3 = 60

4 blocks = 5x4x3x2= 120 5 blocks = 5! = 120

BEDAC Treat as one group

No ways = 3! = 6 ways

(Calc

You need to know this formula! I can't believe now many people got it wrong.

Reas

The biggest mistake was people not reading the question. $\tan \theta = \frac{h}{100}$

h= 100 tand

 $\frac{dh}{d\theta} = 100 \sec^2 \theta$

 $\frac{dh}{d\theta} = \frac{100}{\cos^2 \theta}$

ii) Find do

 $\frac{do}{dt} = \frac{do}{dh} \times \frac{dh}{dt}$

= 0.0014 rad/sec

(2 sig.fig.)

Calc 5

Part (i) should have been so easy but people were still making a mess of it

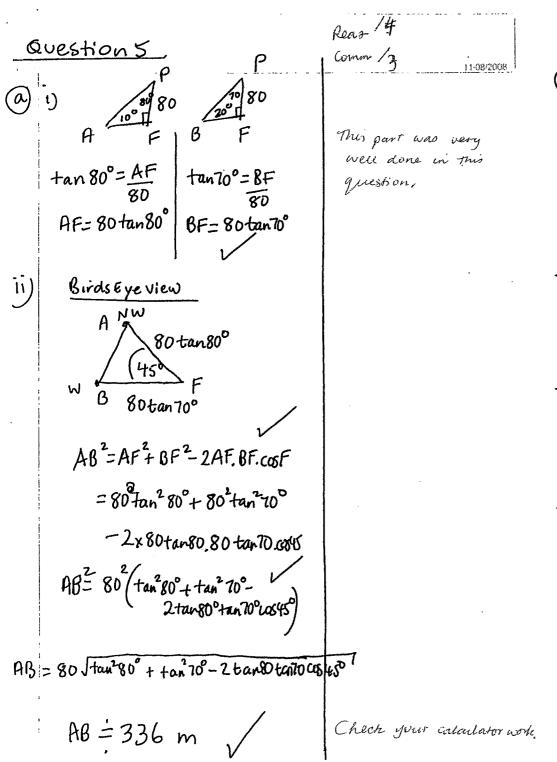

dh = 200 km/h

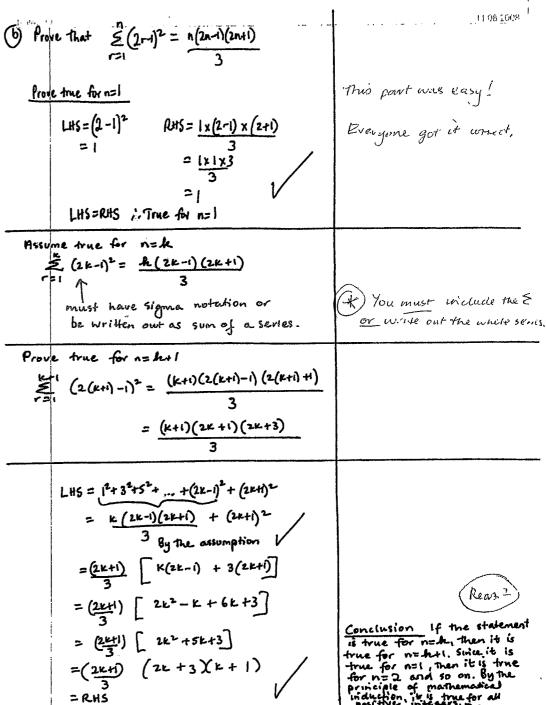

when h= 2000

-tan0=20 0 = 1.52 rad

People just made a mess of this part! Partiwlarly:

- -finding 0 - not considering units!
- not being able to calculate an answer!

(112) Coefficients of x, x2, x3 are $\binom{n}{1}$, $\binom{n}{2}$, $\binom{n}{3}$ If they Form an AP $T_2-T_1=T_3-T_2$ $\binom{n}{2} - \binom{n}{1} = \binom{n}{3} - \binom{n}{2}$ $2\binom{n}{2} = \binom{n}{1} + \binom{n}{3}$ $\underbrace{11}_{2!} \underbrace{\frac{2n!}{(n-2)}} = \underbrace{\frac{n!}{1!(n-1)!}} + \underbrace{\frac{n!}{3!(n-3)!}}$

Not as hard as you may have Thought,

Be prepared in Ext() to know all the Quiourse

Common

 $n(n-1) = n + \frac{n(n-1)(n-2)}{3 \times 2}$

Unrolling the factorials 15 easier than finding a common denominator,

y you divide n' you

will lose a solution.

 $6(n^2-n)=6n+n(n^2-3n+2)$

 $6n^2-6n=6n+n^3-3n^2+2n$

 $n^3 - 9n^2 + 14n = 0$

Reas 2)

 $n(n^2-9n+14)=0$

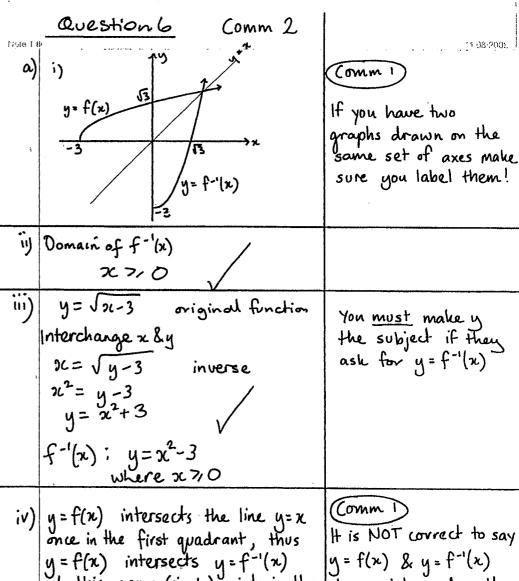

n(n-7)(n-2) = 0 n=0 n=2

not valid

(1+x)2=1+2x+x2 i. n=7 /

A very easy first mark, Delve the equation that printed on the page ,

Commin

at this same (single) point in the first quadrant - the point P .. for pt of int, P, between y=f(n) & y=f(n) solve y=f(x) & y=x simultaneously $\chi - \sqrt{\chi - 3} = 0$

i.a, the x coord of P is a solution to this equation.

It is NOT correct to say lalways intersect on the line y= oc. Be very careful with your wording

(Counter example:) $f(x) = -x^3 /$ v)

Date in

$$P(x) = x - \sqrt{x+3}$$

$$= x - (x+3)^{1/2}$$

$$P'(x) = 1 - \frac{1}{2}(x+3)^{-1/2}.1$$

$$= 1 - \frac{1}{2}(x+3)^{-1/2}$$

$$P(2.5) = 2.5 - \sqrt{2.5+3}$$

= 2.5 - $\sqrt{5.5}$
= 0.1547...

$$\rho'(2.5) = 1 - \frac{1}{2\sqrt{2.543}}$$

$$= 1 - \frac{1}{2\sqrt{5.5}}$$

$$= 0.7867913...$$

By Newton's method, a better approximation would be

$$2c_{2} = x_{1} - \frac{P(x_{1})}{P'(x_{1})}$$

$$= 2.5 - \frac{0.1547...}{0.7867...}$$

$$= 2.303$$

You need to approximate the solution to $x-\sqrt{x+3}=0$, so your function will be $f(x)=x-\sqrt{x+3}$ NOT $f(x)=\sqrt{x+3}$ (b)

$$f(x) = 2x^3 + 3x^2 + kx - 2$$

i)
$$d\beta x = -d/a$$

= $-2/2$

ii) Let the roots be a, a, B

Product of the roots $\Rightarrow \alpha \cdot \frac{1}{\alpha} \cdot \beta = 1$

$$P(1) = 0$$

$$\Rightarrow 2+3+k-2=0$$

$$k = -3$$

ORy Sum of roots = -b/a $\Rightarrow \alpha + \frac{1}{\alpha} + \beta = -\frac{3}{2}$ $\alpha + \frac{1}{\alpha} = -\frac{5}{2}$

Sum of roots two @ a time = $\frac{8}{4}$ $\Rightarrow \alpha \cdot \frac{1}{4} + \alpha \beta + \frac{1}{4} \cdot \beta = \frac{1}{4}$ $\Rightarrow 1 + \beta (\alpha + \frac{1}{4}) = \frac{1}{4}$ $\Rightarrow 1 + 1(-\frac{5}{2}) = \frac{1}{4}$ $\Rightarrow k = -3$ These were easy marks to pick up

This was definitely the easiest way once you found the third root.

Question 7

Reas/7 Comm/3

a) Twens return by car
