INSTRUCTIONS TO CANDIDATES

Section A (30 marks)

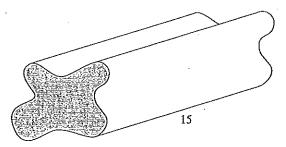

Time: 45 minutes

- 1. Answer all the questions in this section.
- 2. Calculators may not be used in this section.
- 3. All working must be clearly shown. Omission of essential working will result in loss of marks.
- 4. The marks for each question is shown in brackets [] at the end of each question.
- A rectangular block of metal 20 cm by 21 cm by 22 cm is melted down and minted into cylindrical coins of diameter 14 cm and height 2 cm. Find the number of coins that can be made.

Take
$$\pi$$
 to be $\frac{22}{7}$.

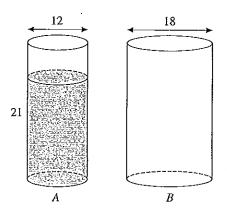

Answer coins [2]

- 2 (a) A solid cube of side x cm weighs 160 g. If its density is 2.5 g/cm³, find the value of x.
 - (b) The diagram shows a solid of length 15 cm and weighing 420 g. The area of the cross-section of the solid is 20 cm². Find the density of the solid.

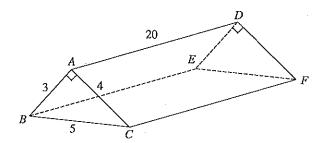

Answer (a)
$$x =$$
 [2]
(b)g/cm³ [1]

3 Two cylindrical jars A and B, have diameters 12 cm and 18 cm respectively. Initially, Cylinder A contains water to a depth of 21 cm and Cylinder B is empty. If all the water from Cylinder A is poured into Cylinder B, find the height of water in Cylinder B.

Answer	***************************************	cm	[3]

- The diagram shows a triangular prism in which three of the faces are rectangular. Given that AB = 3 cm, BC = 5 cm, AC = 4 cm and AD = 20 cm, calculate
 - (a) the volume of the prism,
 - (b) the total surface area.

Answer	(a)	cm^3	[2]
	(b)	cm²	[2]

5 The volume of water in a glass cylinder is 704 cm³. Given that the height of water in the cylinder is 14 cm, calculate the diameter of the glass cylinder.

Take
$$\pi$$
 to be $\frac{22}{7}$.

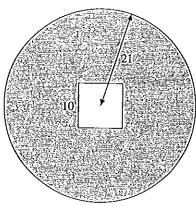

Answercm [2]

College Street State Server

Test 1

- The diagram shows the cross-section of a circular metal disc of radius 21 mm. The central hole of the disc is a square of side 10 mm.
 - (a) Calculate the shaded area of the cross-section of the disc.
 - (b) Given that the thickness of the disc is 5 mm, calculate the volume of metal needed to make 20 such discs.

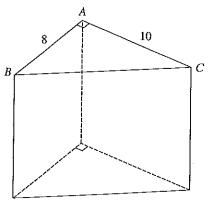

Take π to be $\frac{22}{7}$.

Answer (a)mm² [1]

(b) mm³ [2]

7 The diagram represents a prism where AB = 8 cm and AC = 10 cm. The prism is completely filled with 2.5 kg of a chemical solution. Given that the density of the solution is 12.5 g/cm³, find the height of the prism.

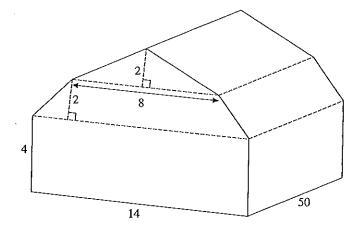

Th

ΑĮ

AlC٤ (a

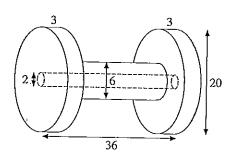

(b (c (d

(b) If the density of air is approximately 1.26 kg/m³, find the mass of air contained in the hall.

Answer (a) m³ [2] (b) kg [1]

The diagram shows a wooden spindle made of two similar circular discs, each of diameter 20 cm and thickness 3 cm which are connected together by a solid wooden cylinder of diameter 6 cm and length 30 cm. A circular hole of diameter 2 cm is cored through the centre of the two discs and the cylinder. Calculate the volume of the spindle giving your answer in terms of π .

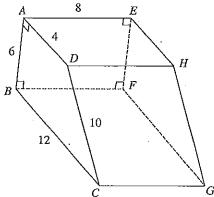

自由法 明明 经本件的工具

Tal- Offer 2334

10 The diagram represents a solid wedge. The faces ABFE, ADHE, DCGH and BCGF are rectangles. ABCD and EFGH are trapeziums. AB = 6 cm, BC = 12 cm, CD = 10 cm, AD = 4 cm and AE = 8 cm.

Calculate

- (a) the area of ABCD,
- (b) the volume of the solid,
- (c) the total surface area of the solid,
- (d) the mass of the solid given that its density is 7.5 g/cm³.

Answer	(a)	cm ²	[1]
	(b)	cm³	[1]
	(c)	cm ²	[2]
	(d)	g	[1]

INSTRUCTIONS TO CANDIDATES

Section B (30 marks)

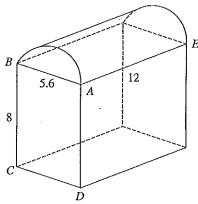

Time: 45 minutes

- Answer all the questions in this section. 1.
- Calculators may be used in this section. 2.
- All working must be clearly shown. Omission of essential working will result in loss of marks. 3. 4.
- The marks for each question is shown in brackets [] at the end of each question.
- 11 A rectangular tank of length 3.5 m and breadth 1.6 m contains 4200 litres of liquid chemical.
 - (a) Calculate the height of the liquid chemical in the tank, giving your answer in metres.
 - (b) After 280 solid metal cubes were dropped into the tank, the liquid level rises by 6.2 cm. Calculate the volume of each metal cube, giving your answer in cubic centimetres.
 - (c) The density of the liquid chemical is 2.1 g/cm³ and the density of the metal cubes is 8.5 g/cm³. Find the total mass of the liquid chemical and the metal cubes, giving your answer in kilograms.

Answer	(a)	m	[2]
	(b) cı	m^3	[2]
	(c)	l-o	[[

- 12 The diagram shows a closed metal storage container made up of a cuboid joined to half of a cylinder. AB = 5.6 m, BC = 8 m and AE = 12 m.
 - (a) Calculate the volume of the container, giving your answer in litres.
 - (b) The exterior surfaces of the container is to be painted. Find the total surface area to be painted.
 - (c) The paint is sold in 5-litre tins. One litre of paint covers 8 m². Find the number of tins that should be bought.

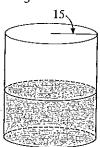

Take π to be $\frac{22}{7}$.

一個世界にはないないの

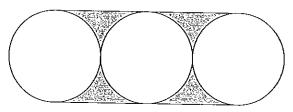

- 13 (a) The diagram shows a cylindrical drum which is $\frac{1}{2}$ filled with liquid. The radius of the drum is 15 cm. After 4713 cm³ of liquid is transferred into the drum, it became $\frac{2}{3}$ full.
 - (i) Calculate the height of the liquid in the drum after the transfer.
 - (ii) Find the surface area of the drum in contact with liquid after the transfer.

[Take π to be 3.142.]

- (b) Three circular cans are tied together with a piece of string. The radius of each can is 14 cm. The diagram shows the top view of the cans. Calculate
 - (i) the area of the shaded region,
 - (ii) the length of string needed to tie the three cans together.

Take π to be $\frac{22}{7}$.

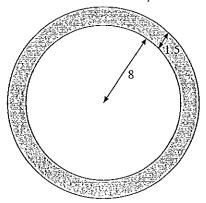

- - (ii) cm [1]

- (a) Calculate the area of the shaded region, giving your answer correct to the nearest square centimetres.
- (b) If the pipe has a length of 12 m, calculate
 - (i) the volume of metal used in cubic centimetres,
 - (ii) the internal curved surface area in square centimetres.
- (c) If the density of the metal is 4.25 g/cm³, calculate the mass of pipe, giving your answer correct to the nearest kilogram.

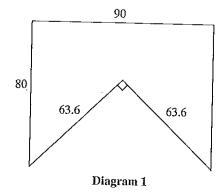

[Take π to be 3.142.]

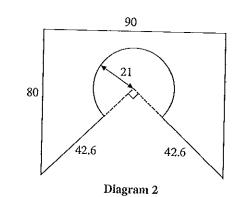

THE COUNTY OF CHICAGON PARTY OF THE COUNTY O

- 15 A carpenter made a table by carving out a prism from a rectangular block of wood. Diagram 1 shows the cross-sectional area of the table. The length of the table is 1.5 m. [All dimensions in the diagrams are given in centimetres.]
 - (a) Calculate the volume of wood required to make the table, giving your answer in cubic centimetres.
 - (b) A customer requested for a slight change in the design of the table. He wanted a circular hole dug out below the table to provide more leg room. The cross-sectional area of the new design for the table is shown in Diagram 2. Calculate the volume of wood required to make this table.
 - (c) If the mass of the table in part (b) is 500 kg, find the density of wood used to make the table, giving your answer in g/cm³, correct to 2 decimal places.

Take π to be $\frac{22}{7}$.

Total area of shaded parts = Area of square PQRS - Area of 4 circles $= 60^2 - 4 \times 3.142 \times 15^2$ $=772.2 \text{ cm}^2$

Teacher's Tip The diameter of the circle is the height of thi

> Area of shaded region $= \left[\frac{1}{2} \times 49 \times (43.4 + 67.2)\right] - \frac{22}{7} \times \left(\frac{49}{2}\right)^2$ = 2709.7 - 1886.5 $= 823.2 \text{ cm}^2$

Area of shaded region = Area of $\triangle P$ + Area of $\triangle Q$ + Area of $\triangle R$ + Area of $\triangle S$ $= \left(\frac{1}{2} \times 4 \times h_1\right) + \left(\frac{1}{2} \times 5 \times h_1\right) +$ $\left(\frac{1}{2} \times 2 \times h_2\right) + \left(\frac{1}{2} \times 7 \times h_2\right)$ $=2h_1+\frac{5}{2}h_1+h_2+\frac{7}{2}h_2$ $= \frac{9}{2}h_1 + \frac{9}{2}h_2$ $= \frac{9}{2}(h_1 + h_2)$ $=\frac{9}{2}(20)$ $h_1 + h_2 = 20 \text{ cm}$ $= 90 \text{ cm}^2$

Test 10: Volume and Surface Area

Section A

- 1. Volume of rectangular block $=20\times21\times22$

 - $= 9240 \text{ cm}^3$

Volume of each cylindrical coin

- $=\frac{22}{7}\times7\times7\times2$
- $= 308 \text{ cm}^3$

No. of coins

- $=\frac{9240}{1}$ 308
- = 30

2. (a) Density = $\frac{iv_{1055}}{Volume}$

$$\therefore \text{ Volume} = \frac{\text{Mass}}{\text{Density}}$$

$$= \frac{160 \text{ g}}{2.5 \text{ g/cm}^3}$$

$$= 64 \text{ cm}^3$$

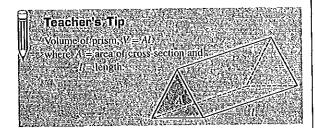

Volume of cube = 64 cm^3 $x^3 = 64$ $x = \sqrt[3]{64} = 4$

3)]

(b) Volume of solid = Area of cross-section × Length = 20 × 15 = 300 cm³

Density =
$$\frac{\text{Mass}}{\text{Volume}}$$

= $\frac{420 \text{ g}}{300 \text{ cm}^3}$
= 1.4 g/cm³

3. Let the height of water in Cylinder B be h cm.

Volume of water in Cylinder
$$A$$
 = Volume of water in Cylinder B

$$\pi \times 6 \times 6 \times 21 = \pi \times 9 \times 9 \times h$$

$$h = \frac{6 \times 6 \times 21}{9 \times 9}$$

$$= 9\frac{1}{3}$$

- : the height of water in Cylinder B is $9\frac{1}{3}$ cm.
- 4. (a) Area of cross-section = $\frac{1}{2} \times 3 \times 4$ = 6 cm^2

Volume of prism = Area of cross-section \times Length = 6×20 = 120 cm^3

(b) Perimeter of cross-section = 3 + 4 + 5= 12 cm

Total surface area
$$= \begin{pmatrix} \text{Perimeter of } \\ \text{cross-section} \end{pmatrix} \times (\text{Length}) + 2 \begin{pmatrix} \text{Area of } \\ \text{cross-section} \end{pmatrix}$$

$$= 12 \times 20 + 2(6)$$

$$= 240 + 12$$

$$= 252 \text{ cm}^2$$

5. Let the radius of the cylinder be r cm. Volume of water in cylinder = 704 cm^3

$$\frac{22}{7_1} \times r^2 \times \cancel{14}^2 = 704$$

$$r^2 = \frac{704}{44}$$

$$= 16$$

$$r = \sqrt{16}$$

: the diameter of the glass cylinder is 8 cm.

6. (a) Shaded area =
$$\left(\frac{22}{7} \times 21 \times 21\right) - 10^2$$

= 1386 - 100
= 1286 cm²

10.

- (b) Volume of 20 discs = $20 \times (1286 \times 5)$ = 128600 cm^3
- 7. Let h cm be the height of the prism.

Volume of prism =
$$\left(\frac{1}{2} \times 8 \times 10\right) \times h$$

= $40h \text{ cm}^3$

Density =
$$\frac{\text{Mass}}{\text{Volume}}$$

Volume = $\frac{\text{Mass}}{\text{Density}}$

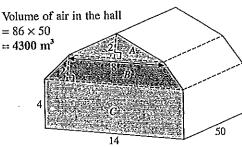

$$40h = \frac{2500}{12.5}$$

$$40h = 200$$

$$h = \frac{200}{40}$$

$$= 5$$
Change 2:5 kg/to/2500/g.

- : the height of the prism is 5 cm.
- 8. (a) Area of cross-section = Area of A + Area of B + Area of C= $\left(\frac{1}{2} \times 8 \times 2\right) + \left[\frac{1}{2} \times 2 \times (8 + 14)\right] + (4 \times 14)$ = 8 + 22 + 56= 86 m^2

(b) Density =
$$\frac{\text{Mass}}{\text{Volume}}$$

Mass = Density × Volume
= 1.26 kg/m³ × 4300 m³
= 5418 kg

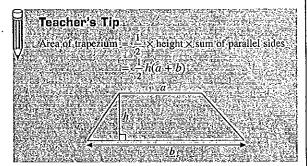

9. Volume of spindle

$$= \begin{pmatrix} \text{Volume of } \\ 2 \text{ circular } \\ \text{discs} \end{pmatrix} + \begin{pmatrix} \text{Volume of } \\ \text{cylinder} \end{pmatrix} - \begin{pmatrix} \text{Volume } \\ \text{of circular } \\ \text{hole} \end{pmatrix}$$

$$= 2(\pi \times 10^2 \times 3) + (\pi \times 3^2 \times 30) - (\pi \times 1^2 \times 36)$$

$$= 600\pi + 270\pi - 36\pi$$

$$= 834\pi \text{ cm}^3$$

(b) Volume of solid =
$$\binom{\text{Area of }}{\text{cross-section}} \times \text{Length}$$

= Area of $ABCD \times AE$
= 48×8
= 384 cm^3

(c) Total surface area

$$= \left(\begin{array}{c} \text{Perimeter of} \\ \text{cross-section} \end{array} \right) \times \left(\text{Length} \right) + 2 \left(\begin{array}{c} \text{Area of} \\ \text{cross-section} \end{array} \right)$$

$$= (6 + 12 + 10 + 4) \times 8 + 2(48)$$

$$= 256 + 96$$

$$= 352 \text{ cm}^2$$

(d) Density = $\frac{\text{Mass}}{\text{Volume}}$ Mass = Density × Volume = 7.5 g/cm^3 × 384 cm³ = 2880 g

Section B

11. (a) Let h cm be the height of liquid chemical in the tank.

Volume of liquid chemical = $4200 \ l$ $350 \times 160 \times h = 4200 \ 000 \ cm^3$ $h = .\frac{4200 \ 000}{350 \times 160}$ = $75 \ cm$ = $\frac{75}{100} \ m$ = $0.75 \ m$

 $\mathrel{\raisebox{.3ex}{$.$}}$ the height of the liquid chemical is 0.75 m.

Alternative method:

Let h m be the height of liquid chemical in the tank.

Volume of chemical = 4200 I

$$3.5 \times 1.6 \times h = \frac{4200}{1000} \text{ m}^3$$

$$h = \frac{4.2}{3.5 \times 1.6}$$

$$= 0.75$$

.. the height of the liquid chemical is 0.75 m.

- (b) Volume of 250 solid metal cubes
 - $= 350 \times 160 \times 6.2$
 - = 347 200

Volume of each metal cube

- $=\frac{347\ 200}{280}$
- $= 1240 \text{ cm}^3$
- (c) $Mass = Density \times Volume$

Mass of liquid chemical

- $= 2.1 \text{ g/cm}^3 \times 4 200 000 \text{ cm}^3$
- = 8 820 000 g
- = 8820 kg

Mass of metal cubes = $8.5 \text{ g/cm}^3 \times 347 200 \text{ cm}^3$ = 2.951 200 g= 2951.2 kg

Total mass of liquid chemical and metal cubes

- = 8820 + 2951.2
- = 11771.2 kg
- 12. (a) Volume of container.

$$= \begin{pmatrix} \text{Volume of cuboid} \end{pmatrix} + \begin{pmatrix} \text{Volume of half a cylinder} \end{pmatrix}$$

$$= (12 \times 5.6 \times 8) + \frac{1}{2} \left[\frac{22}{7} \times \left(\frac{5.6}{2} \right)^2 \times 12 \right]$$

$$= 537.6 + 147.84$$

$$= 685.44 \text{ m}^3$$

$$= 685.440 \text{ l}$$

$$= 685.440 \text{ l}$$

(b) Total surface area

$$= \left(\begin{array}{l} \text{Perimeter of } \\ \text{cross-section} \times \text{Length} \right) + 2 \left(\begin{array}{l} \text{Area of } \\ \text{cross-section} \end{array} \right)$$

$$= \left[\left(8 + 5.6 + 8 + \frac{1}{2} \times \frac{22}{7} \times 5.6 \right) \times 12 \right]$$

$$+ 2 \left[8 \times 5.6 + \frac{1}{2} \times \frac{22}{7} \times \left(\frac{5.6}{2} \right)^2 \right]$$

$$= 364.8 + 114.24$$

$$= 479.04 \text{ m}^2$$

(c) Area that can be covered by 1 tin

: no. of tins required

$$=\frac{479.04}{40}=11.976$$

.. no. of tins bought = 12

13. (a) (i) $\frac{2}{3} - \frac{1}{2} = \frac{1}{6}$

Let the height of the drum be h cm.

$$\therefore \frac{1}{6} \times 3.142 \times 15^2 \times h = 4713$$

$$h = \frac{4713 \times 6}{3.142 \times 15^2}$$
$$= 40$$

Height of liquid in drum after the transfer

$$=\frac{2}{3}\times40$$

$$=26\frac{2}{3}$$
 cm

(ii) Surface area of drum in contact with the liquid

$$= (3.142 \times 15^2) + \left(2 \times 3.142 \times 15 \times 26\frac{2}{3}\right)$$

- = 706.95 + 2513.6
- $= 3220.55 \text{ cm}^2$

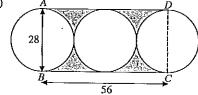

Teacher's Tip

Surface area of a closed cylinder = $2\pi r^2 + 2\pi rh$

Surface (area of cylinder with an opened top, τ

≡radius and h ≡ height.

(b) (i)

Area of shaded region

= Area of rectangle ABCD - 2(Area of circle)

$$= (28 \times 56) - 2\left(\frac{22}{7} \times 14^2\right)$$

- **= 1568 1232**
- $= 336 \text{ cm}^2$
- (ii) Length of string needed

$$= AD + BC +$$
Circumference of circle

- $= 56 + 56 + 2 \times \frac{22}{7} \times 14$
- = 200 cm

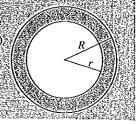

Teacher's Tip

The arcs of the two semicircles at each end forms a

- 14. (a) Area of shaded region
 - $= 3.142(8 + 1.5)^2 3.142(8)^2$
 - $=3.142[9.5^2-8^2]$
 - = 82.4775
 - $\approx 82 \text{ cm}^2 \text{ (correct to the nearest cm}^2\text{)}$

Teacher's Tip

Area of annulus =

- (b) (i) Volume of metal
 - $= 82.4775 \times 1200$

 - $= 98 973 \text{ cm}^3$
 - (ii) Internal curved surface area
 - $= 2 \times 3.142 \times 8 \times 1200$
 - $= 60 326.4 \text{ cm}^2$

- (c) Mass = Density × Volume
 - $= 4.25 \text{ g/cm}^3 \times 98 973 \text{ cm}^3$
 - = 420 635.25 g
 - = 420.63525 kg
 - \approx 421 kg (correct to the nearest kg)
- 15. (a) Cross-sectional area of table
 - = Area of rectangle Area of triangle

$$= 80 \times 90 - \frac{1}{2} \times 63.6 \times 63.6$$
$$= 5177.52 \text{ cm}^2$$

Volume of wood required

- $= 5177.52 \times 150$
- $= 776 628 \text{ cm}^3$

(b) Volume of wood dug out

$$= \begin{pmatrix} Area \text{ of} \\ cross-section \end{pmatrix} \times Length$$

$$= \left(\frac{3}{4} \times \frac{22}{7} \times 21^2\right) \times 150$$

 $= 155 925 \text{ cm}^3$

Volume of wood required

- = 776 628 155 925
- $= 620 703 \text{ cm}^3$
- (c) Density = $\frac{\text{N1abs}}{\text{Volume}}$

$$= \frac{500 \,\mathrm{kg}}{620\,703 \,\mathrm{cm}^3}$$

$$\approx 0.81 \text{ g/cm}^3$$
 (correct to 2 d.p.)
