10. Call the students who cannot be on the same team A and B.

Case 1 students A and B are in separate teams.

This leaves ${}^{11}C_5 \times {}^6C_5$ ways the remaining students can be placed with the last student being the referee.

Case 2 Student A is the referee which leaves ${}^{12}C_6 \times {}^6C_6 = {}^{12}C_6$ ways the team 1 and team 2 can be formed. However those chosen for team 1 and team 2 could be interchanged, and it is still the same arrangement, so the number of ways = ${}^{12}C_6 + 2$ ways.

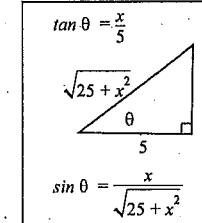

Similarly if student B is the referee this again leaves ${}^{12}C_6 + 2$ ways the teams can be formed.

$$\text{Total Ways} = {}^{11}C_5 \times {}^6C_5 + {}^{12}C_6 + 2 \times 2 = {}^{11}C_5 \times {}^6C_5 + {}^{12}C_6$$
