sci>net business solutions | **YOUR BUSINESS smarter>faster**

ERP >>> Rapid

Your Fastrack to efficiency

Built upon the foundation of **ERP>Retail ERP>>>Rapid** is Sci-Net's new templated approach for a swift, seamless and cost effective implementation.

ERP >>> Rapid

ERP >>> Rapid

Your Fastrack
to efficiency

ERP>>>Rapid is Sci-Net's latest innovative solution developed specifically for the furniture industry.

This new alternative has been derived from Sci-Net's extensive experience serving the furniture industry. Over the years, the team noticed patterns emerging with existing clients, such as recurring requirements, common processes, shared challenges, etc.

Realising that while every business is unique, a standard structure within the furniture industry remains consistent.

Identifying and leveraging this consistency has enabled Sci-Net to develop **ERP>>>Rapid**, a robust, pre-configured solution that perfectly aligns with the industry's core needs.

Built upon the **ERP>Retail** foundations, this pre-set configuration reduces development, consultation, and implementation hours, ensuring a seamless, swift, and budget-friendly implementation of the new solution.

It is the ideal solution for small-scale retailers who need a software solution that allows them to keep up with demand and effectively compete with larger companies - without breaking the bank.

Solutions to empower furniture retailers

	ERP>Retail	**ERP>>>Rapid**
Customisation and Flexibility	Tailored specifically to your organisation's requirements, providing a unique set of tools that aligns with your exact business needs and processes.	Based on industry best practices and a pre-set template, providing a quicker setup while still offering a high degree of relevance and efficiency.
Implementation Time	Generally, requires a longer lead time due to any required customisation, testing and integrations.	Aims for rapid deployment due to its templated approach, making it ideal for businesses looking for a quick solution.
Cost	Potentially higher due to the customisation, consultation, and training sessions.	Typically, more cost-effective because it leverages a pre-set configuration, reducing development, consultation, and implementation hours.
Scalability	Highly scalable due to its unique build and can be tailored to meet the exact requirements of a larger business.	Offers scalability but within the bounds of the templated design. Ideal for small scale businesses anticipating growth without significant process deviations in the short to medium term.
Training and Adoption	Might require longer training sessions given its unique and specialised setup tailored to your organisation.	Training is more streamlined, given the templated design. Employees can onboard quicker due to the similarity of best practices in the industry.
Maintenance and Support	Dedicated support for your unique setup, with potential additional costs for specialised updates or changes.	Updates and support are more uniform and may be quicker to deploy due to the standardised nature of the product.
