## Portable Lamp, Environmental Responsibility

### Sowden

Looking for the best technology is at the heart of the SOWDEN design process when developing lighting products. With recent EU proposals regarding the RIGHT TO REPAIR, recyclability of materials and environmental considerations, the family of SOWDEN Portable Lamps has been designed with environmental responsibility in mind - the SOWDEN LED DISC, a light source that can be unscrewed and changed, and the 18650 2600mAh lithium-ion rechargeable batteries can be easily replaced when necessary. Our lifestyle products are household and personal accessories - everything made from the best, carefully chosen, materials and approved to international safety and environmental standards - our aim - long life to the things you love - and, by the way, all our packaging is made from 100% recycled paper and excludes the use of any plastic parts.

# Portable Lamp, PL1

## Sowden

Rechargeable battery lamps with LED light source

Made in China

PL1 portable lamps are suitable for indoor and outdoor, dry locations. The SOWDEN LED DISC and the 2600mAh li-ion rechargeable battery are replaceable if ever needed. The brightness of the replaceable SOWDEN LED DISC is dimmable to suit use and it has three settings, controlled by tapping the top of the lamp. Supplied with a USB cable for charging, the battery life when full is 4 to 10+ hours, depending on the degree of brightness. It takes approximately three hours for a full charge of the battery. When connected to USB, the lamp can be switched on for an indefinite period. The battery can be swapped with a fully charged one during use, rather than relying on recharging with a USB - in restaurants, for example, it means customers are never left in the dark. The shade is also removable for easy cleaning.
