

# **The emerging role of autonomy in modern combat swimmer propulsion systems**

How judicious use of autonomous controls can improve the human-machine interface

Underwater Intervention  
February, 2018

# The Realm of the Combat Diver

# The Realm of the Combat Diver

**COLD** LIMITED TO NO VISIBILITY  
**UNDERWATER**  
OPPOSING FORCES **DARK**

## Tasks:

Infiltration & Exfiltration for:

- Amphibious Assaults
- High Value Target Operations
- Clandestine Surveying
- Special reconnaissance

## Subtasks:

- Warfighting specific tasks
- Swimming
- Vehicle Piloting
- Navigating

# Quintessential AI Conversation

Minsky

*“We're going to make machines intelligent.”*

*We are going to make them conscious!”*

Engelbart

*“You're going to do all that for the machines?”*

*What are you going to do for the people?”*

# More Machines = More tasking

# More Machines = More tasking

# STIDD and Greensea Partnership

## STIDD – EXPERTS IN DIVER PROPULSION

- Producing military submersibles since 1998
- Most widely used two-man underwater mobility platform in the world
- Extensive customer-base: United States Marine Corps, Special Operations Command, Coast Guard, and Coalition Forces.
- STIDD continues to offer SOF and Marine units the latest technology to counter today's increasingly asymmetric and unpredictable maritime threat environment.

## GREENSEA – EXPERTS IN NAVIGATION & AUTOMATION

- Founded in 2006
- Patent-pending OPENSEA technology -- the first commercial operating platform for the marine industry
- Leading provider of commercially available navigation, control, and automation products for marine with over 700 systems in the field
- Spanning the marine industry – unmanned, manned, surface, and subsea

# Mission & Strategy

Greensea improves the relationship between man and machine to make the work they do together more productive.

**MAN AND MACHINE ENGAGEMENT**

**OPENSEA OPERATING PLATFORM**

**MANNED - UNMANNED - SURFACE - SUBSEA**

**NAVIGATION**

**CONTROL**

**USER  
INTERFACE**

# Vehicle Types Utilizing Greensea

Inspection-Class ROVs

Work-Class ROVs

Diver Propulsion Sys

Vessels

Gliders

USVs

Towfish

Submarines

# Special Operations Community Engagement

## STIDD RNAV2 AP2 OM2 Diver Propulsion Device

Actively and continuously sought input from the special operations community to develop, test and commercialize the technology and product

Greensea's own team of diver-developers worked side by side with operators throughout the process

# Let Combat Divers be Combat Divers

*What are you going to do for the people?*

Combine manual operation  
with electronic fly-by-wire

Add autopilots

Add route-following

Allow optional manning

Add remote communications to automation

# STIDD RNAV2 AP2 OM2 Diver Propulsion Device Powered by Greensea

## O P E N S E A Operating Platform

RNAV2 Diver Navigation System

- Inertial navigation system (INS)
- Sonar interface
- Mission planning
- Mission execution

Diver Propulsion Device (DPD) with AP2 & OM2

- Autopilots
- Automation
- Optionally Manned Capability
- Through-water, through-air, over the horizon communication and control

# STIDD RNAV2 Interface w/ Fully-Integrated Navigation & Control

# Simplify Vehicle Piloting

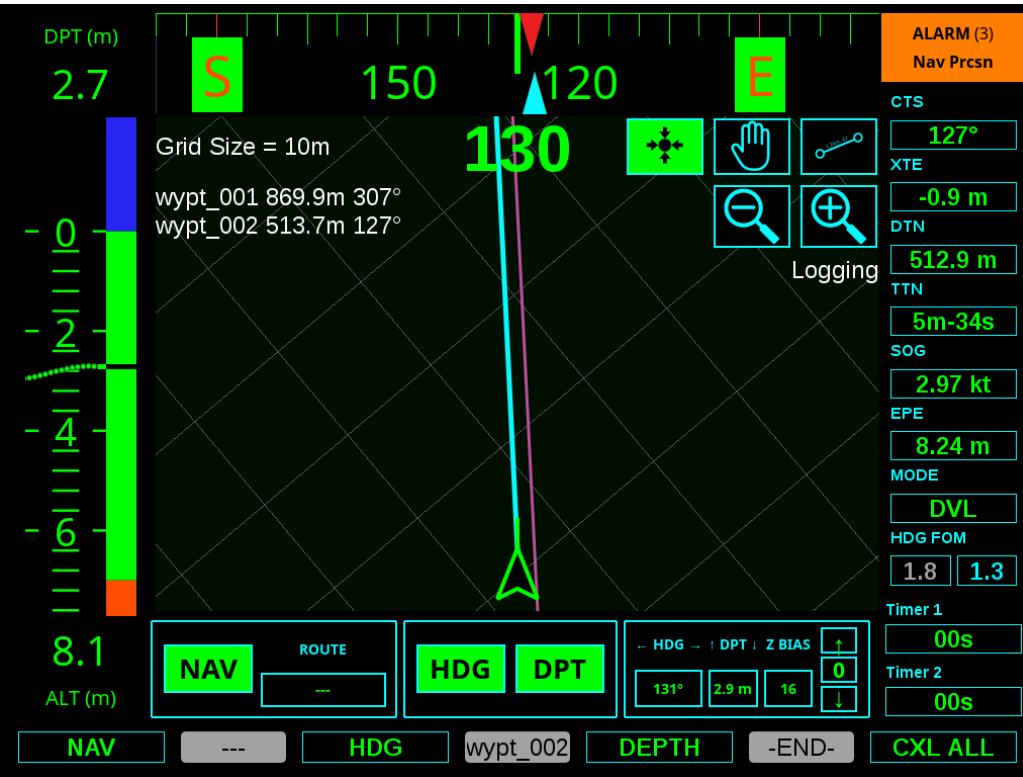

Add fly-by wire  
capability through:

Auto-heading  
control

Auto-depth control

# Simplify Vehicle Piloting

# Steering is shifted to simple thumb movements

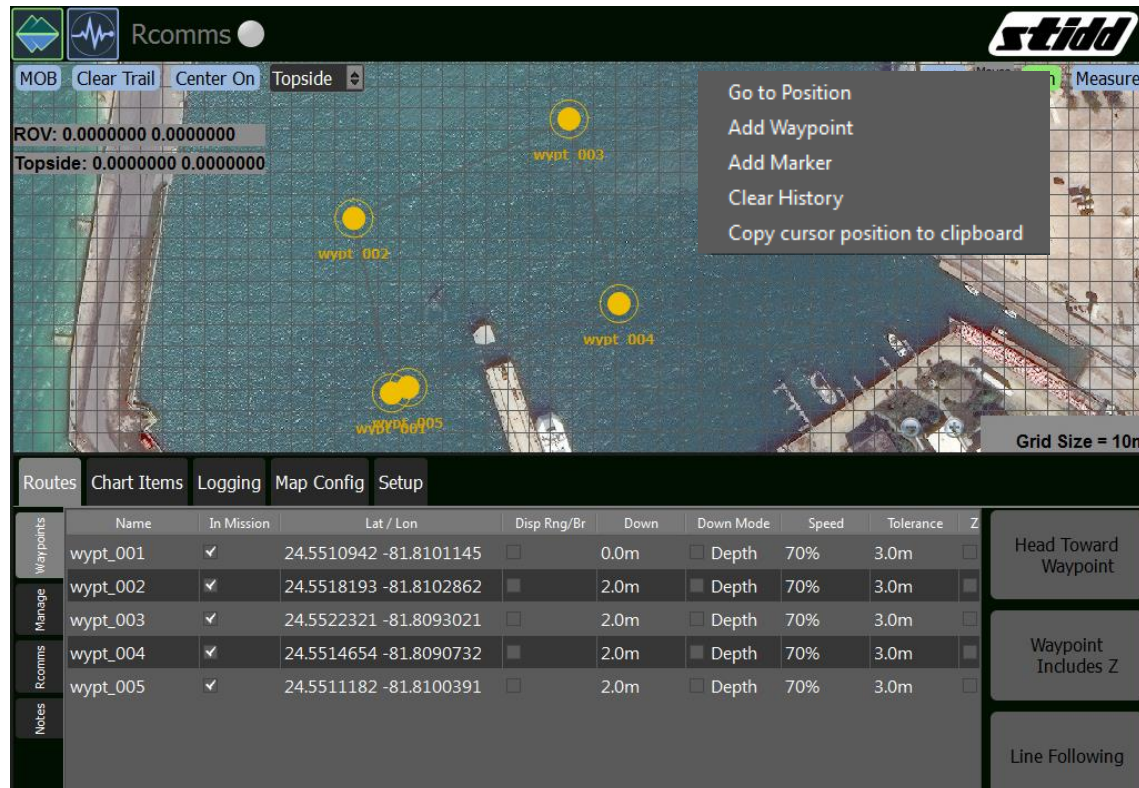

# Simplify Navigating

Autopilot:  
Waypoint and  
route following  
Less steering,  
more situational  
awareness

# Simplify Planning & Task Execution

The screenshot displays the STIDD software interface. At the top, there's a header with icons for MOB, Clear Trail, Center On, and Topside. Below this, a status bar shows ROV and Topside coordinates. The main map area shows a grid with several waypoints labeled wypt\_001 through wypt\_005. A context menu is open over the map, listing actions: Go to Position, Add Waypoint, Add Marker, Clear History, and Copy cursor position to clipboard. At the bottom, there's a table with columns for Name, In Mission, Lat / Lon, Disp Rng/Br, Down, Down Mode, Speed, Tolerance, and Z. The table lists five waypoints, all marked as 'In Mission'. To the right of the table are buttons for 'Head Toward Waypoint', 'Waypoint Includes Z', and 'Line Following'.

Name	In Mission	Lat / Lon	Disp Rng/Br	Down	Down Mode	Speed	Tolerance	Z
wypt_001	✓	24.5510942 -81.8101145	<input type="checkbox"/>	0.0m	<input type="checkbox"/> Depth	70%	3.0m	<input type="checkbox"/>
wypt_002	✓	24.5518193 -81.8102862	<input checked="" type="checkbox"/>	2.0m	<input checked="" type="checkbox"/> Depth	70%	3.0m	<input checked="" type="checkbox"/>
wypt_003	✓	24.5522321 -81.8093021	<input type="checkbox"/>	2.0m	<input type="checkbox"/> Depth	70%	3.0m	<input type="checkbox"/>
wypt_004	✓	24.5514654 -81.8090732	<input checked="" type="checkbox"/>	2.0m	<input checked="" type="checkbox"/> Depth	70%	3.0m	<input checked="" type="checkbox"/>
wypt_005	✓	24.5511182 -81.8100391	<input type="checkbox"/>	2.0m	<input type="checkbox"/> Depth	70%	3.0m	<input type="checkbox"/>

Use offline planning software to pre-load routes, search patterns, notes

Embed task functions within software (loiter, sonar relative, virtual anchor)

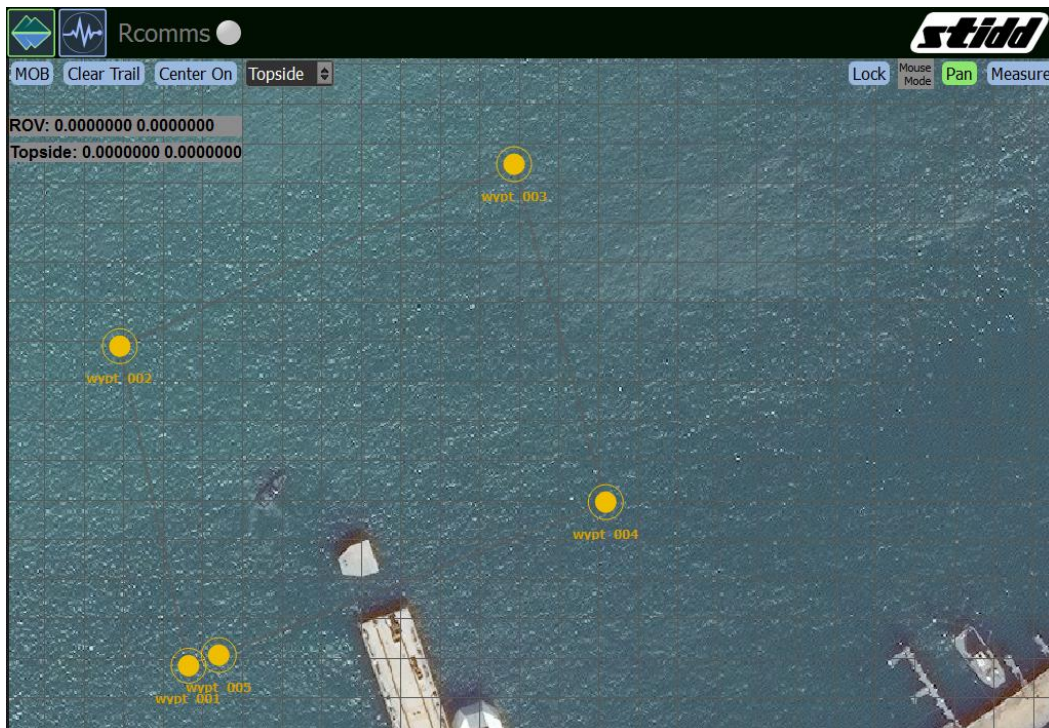

“Man overboard” button to capture all data and screenshot at a given instance

# Optional Manning

Turn the DPD into an AUV, making the diver an interested passenger with ability to assume control

# Functions provided by remote autonomy

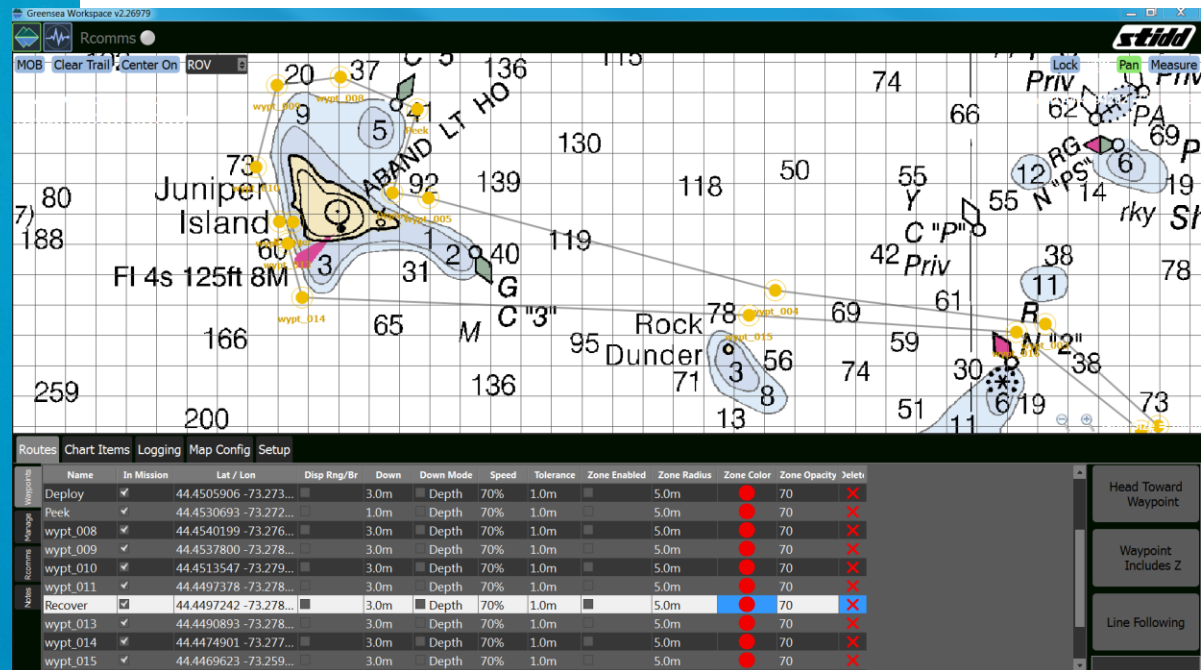

Send waypoints and routes remotely

Assign tasks to waypoints, send remotely

Vehicle can “sneak and peek” to receive updated tasking

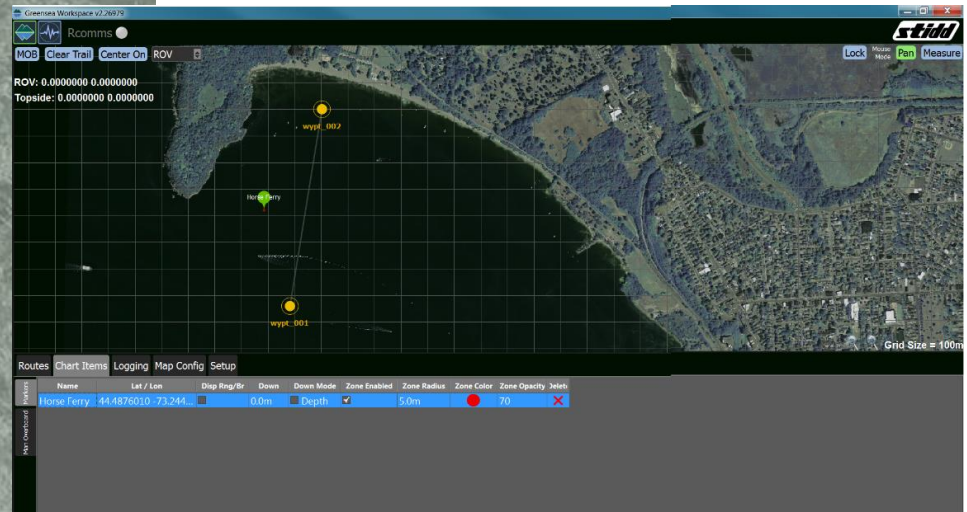

# Potential Operational Scenarios

DPD returns to home base  
after delivering divers

# Potential Operational Scenarios

Unmanned DPD  
delivers materials

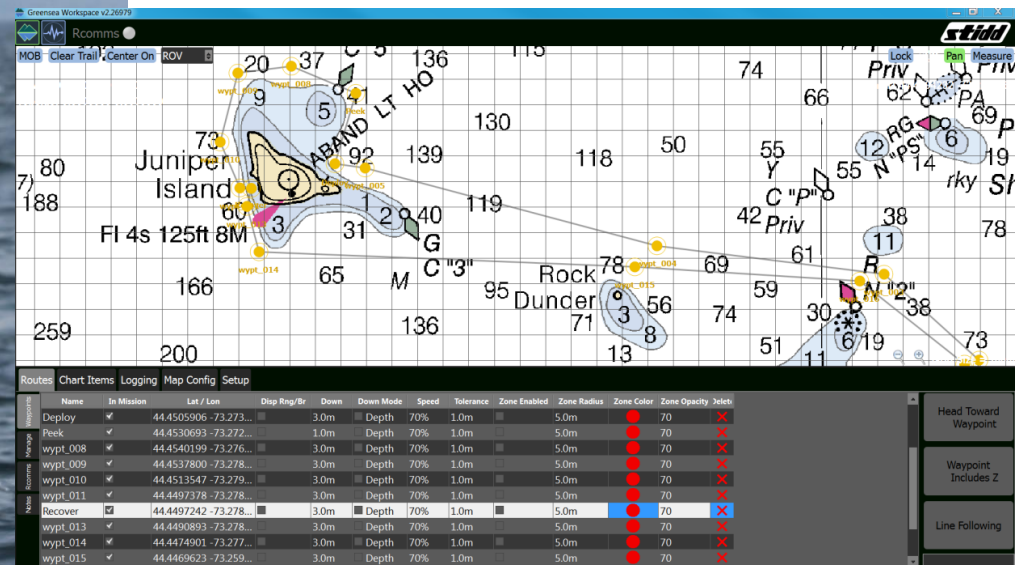

# Potential Operational Scenarios

Unmanned DPD receives FRAGORD and transits to secondary exfiltration point

# Potential Operational Scenarios

Unmanned DPD conducts sonar survey of area, returns to home base, and picks up divers for infiltration using info gained from survey

# Autonomy and the Combat Diver

## Technology for Man and Machine

The implementation of autonomous and supervised autonomous functions does not eliminate the need for the Combat Diver.

By developing and improving the diver's relationship with the technology, the diver and the vehicle can meet their full potential and open paths to more efficient operations.

- The diver has more bandwidth available for the combat related tasks.
- The diver and tactical commander can more efficiently implement contingency plans.

Thank you to STIDD Systems, Inc. our manufacturing partner for RNAV2 AP2 OM2.

[www.stiddmil.com](http://www.stiddmil.com)

Thank you to all the divers who have evaluated the RNAV2 AP2 OM2 product and provided valuable, honest feedback.
