**THIS IS A POWERPOINT FREE
PRESENTATION**

AN IDEA

Why not build EW-systems the way we build a computer?

- Piece by piece
- Multiple hardware suppliers
- Multiple software suppliers

Combined, to achieve the highest performance today and tomorrow?

WHY CHANGE?

We see thousands of threats today.

Tomorrow there will be another threat that we need to handle.

**Should we buy a new EW-system for each threat or upgrade an existing?
Is it possible to upgrade our existing EW-systems?**

Not just adjust the database but really upgrade both hardware and software?

IT IS POSSIBLE ALREADY

Complex military systems are upgraded, just like a computer, already.

Why not use this knowledge in how we build our EW-systems.

We cannot afford to buy a new EW-system for each threat that is discovered.

HOW CAN WE MAKE THIS HAPPEN?

Choice, determination and courage!

Choose your next EW-system by how it is possible to upgrade

Stay with your choice when suppliers say it can't be done (it can be done)

Use your courage to make the right choice – an EW-system that is at top performance not just today but tomorrow, and the next day, and the next day, and ...
