

EW ... the future beyond CEMA?

Ideas and further thoughts

Alan Blackwell

EW ... the future beyond CEMA?

- Until 2000, EW relatively well bounded.
- Since 2000, our understanding and practices have been disruptively shaped by:
 - rapid pace of technological change;
 - new – very different – threats;
 - changing nature of warfare ('attrition' to 'cognition') and the Information Age.
- This presentation will:
 - reflect on the journey we have taken since 2000;
 - consider the emerging technologies, threats and practices that will shape the future;
 - propose an approach to handling the (near) future;
 - offer further thoughts on issues raised so far.

The 21st century so far ...

➤ First decade:

- Iraq experience changed mindset;
- Distinction between 'tactical' and 'strategic' blurred;
- Convergence of 'EW' and 'SIGINT'.

The 21st century so far ...

➤ First decade:

- Iraq experience changed mindset;
- Distinction between 'tactical' and 'strategic' blurred;
- Convergence of 'EW' and 'SIGINT'.

The 21st century so far ...

➤ First decade:

- Iraq experience changed mindset;
- Distinction between 'tactical' and 'strategic' blurred;
- Convergence of 'EW' and 'SIGINT'.

➤ Second decade:

- Lessons from Afghanistan;
- Democratisation of technology and the rise of cyber;
- Resurgent peer adversaries.

The 21st century so far ...

➤ First decade:

- Iraq experience changed mindset;
- Distinction between 'tactical' and 'strategic' blurred;
- Convergence of 'EW' and 'SIGINT'.

➤ Second decade:

- Lessons from Afghanistan;
- Democratisation of technology and the rise of cyber;
- Resurgent peer adversaries.

The 21st century so far ...

➤ First decade:

- Iraq experience changed mindset;
- Distinction between 'tactical' and 'strategic' blurred;
- Convergence of 'EW' and 'SIGINT'.

➤ Second decade:

- Lessons from Afghanistan;
- Democratisation of technology and the rise of cyber;
- Resurgent peer adversaries.

➤ Third decade:

Current challenges

➤ Fragmented approach:

- to sponsoring, specifying, buying, fielding and supporting equipment: increases complexity of training, doctrine, support, data fusion.

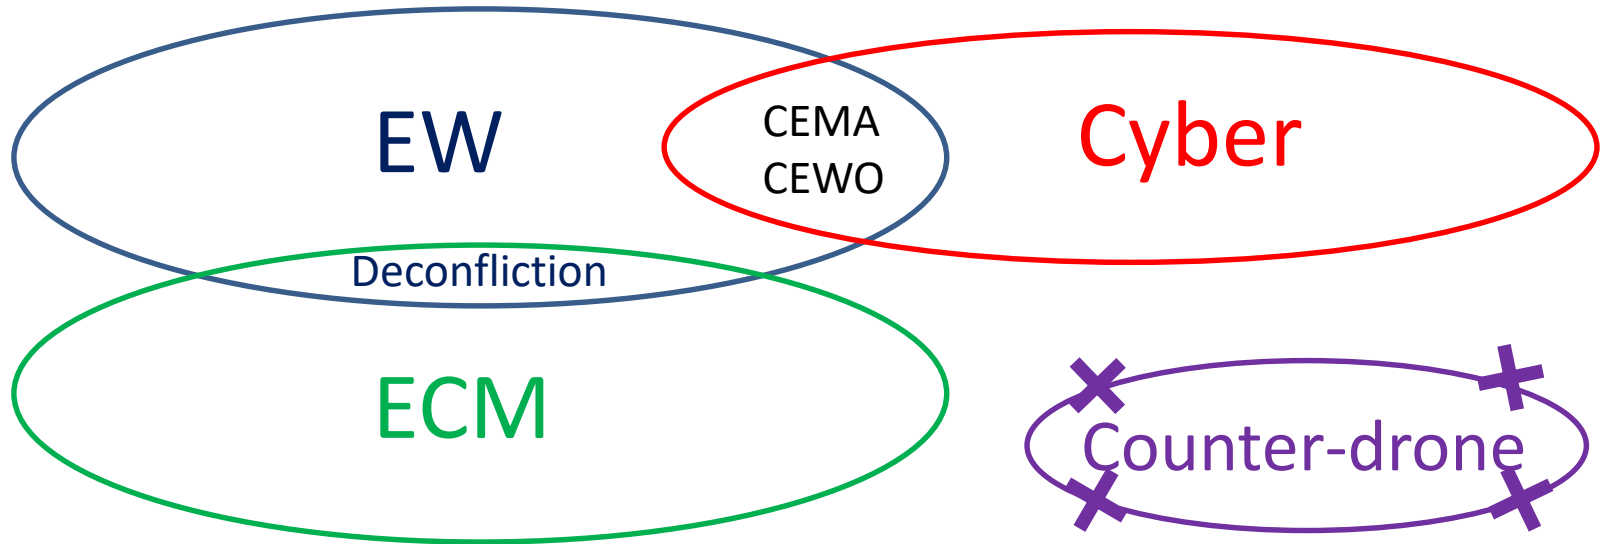

➤ Range of threats:

- Relatively bounded during Iraq and Afghanistan;
- Now more wide ranging and more difficult to predict;
- and more (technically) complex ... but (commercially) simpler

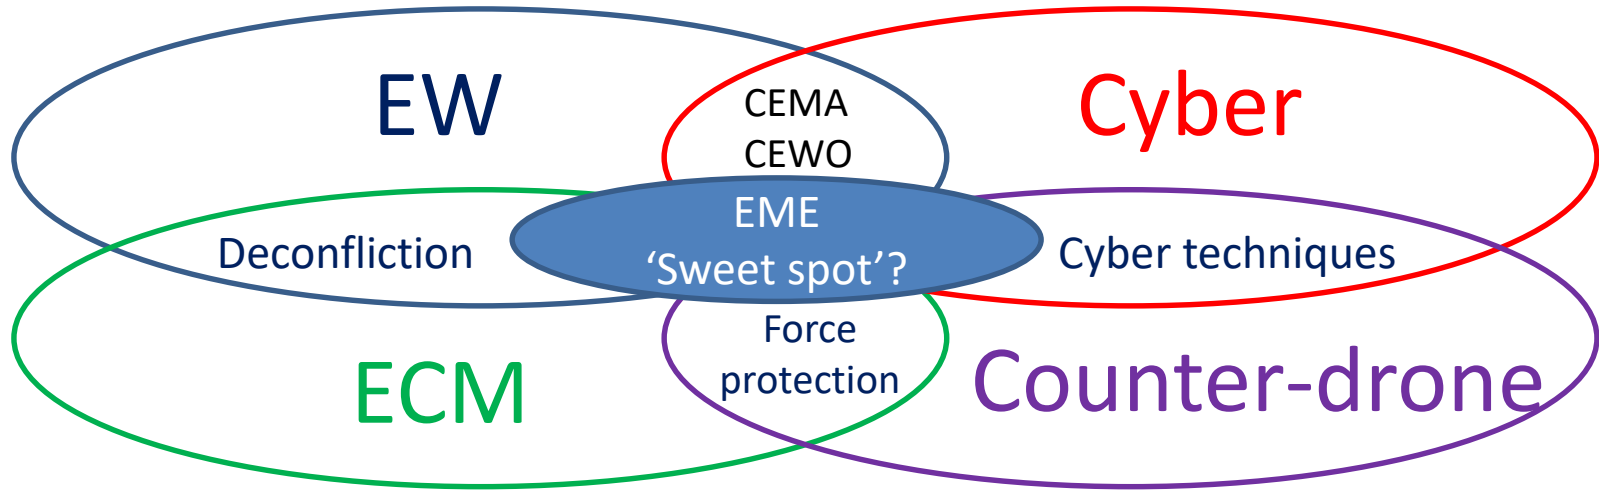

➤ Pace of technological change:

- Allows adversaries to adapt and hide better ... *but* ...
- Also allows us to respond more flexibly.

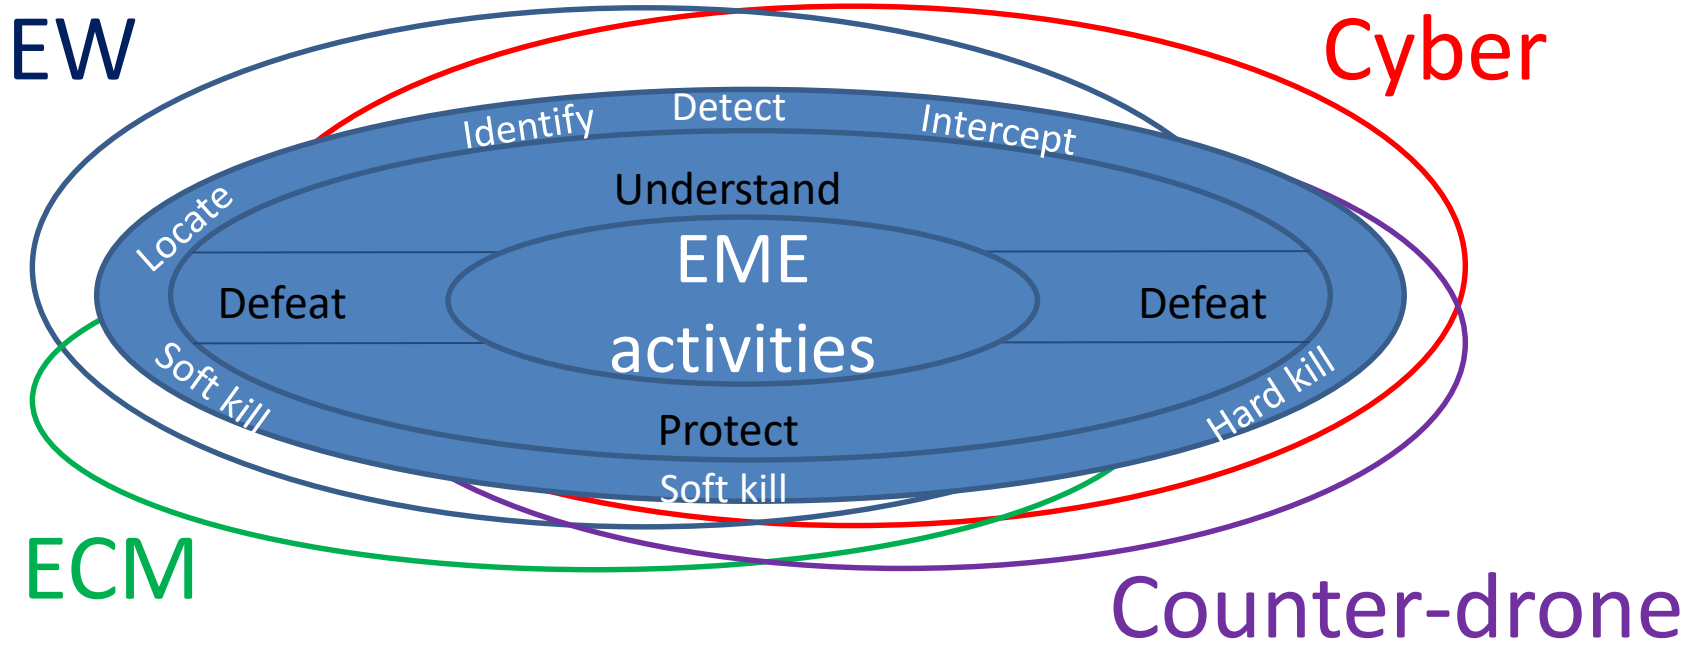

Current Approach

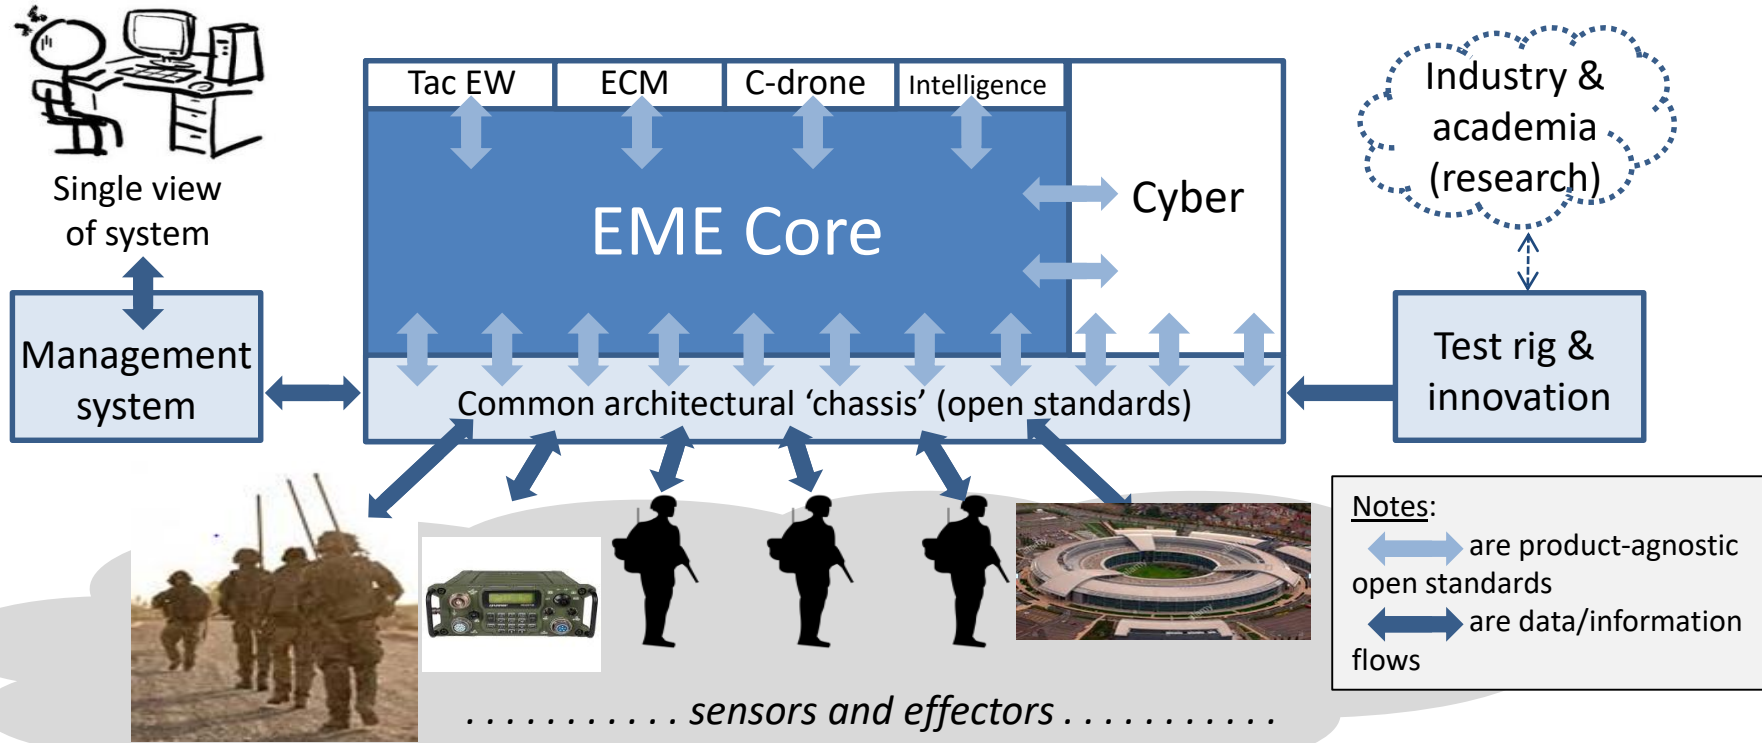

Converging the Approach

Coherent Approach

Coherent approach: how?

Issues

- **Skills:**
 - Wider range of skills needed: is it realistic?
 - Skill fade?
 - Do sufficient, and sufficiently capable, people exist?
- **Management/governance:**
 - Will it be too complex to manage?
 - Where do you draw the system/capability boundary?
- **Data overload:**
 - Can AI/machine learning advance faster than our ability to collect data?
 - How to protect/classify information between different groups?
- **Collective risk:** does aggregation increase our own vulnerability too much?
- **Equipment/systems:** can we overcome our protective instincts?

Closing thoughts

What could EW look like beyond CEMA, and what are key issues?

- Wider remit: include FP ECM and counter-drone, and use such sources for EMS survey/defining 'normal'
- Greater re-use of assets in support of EME activity
- 'Gather once, use many times' approach to information
- Shift emphasis from 'collect' to 'data exploitation'?
- Exploit AI and machine learning to support decision making
- Span from tactical information to strategic influence
- **Capabilities focussed on EME as a warfighting environment**
