

# Walki®Re-Inforce Mono

## Prevent tears with the use of thermoformable mono-material

---

The underbody shield of a car gains a robust upgrade with WALKI®Re-Inforce Mono — a thermoformable mono-material crafted from durable polyester. Engineered to prevent tearing, this innovative component not only enhances tear resistance and part integrity but also stands out for its sustainable touch. It is recyclable, especially when used with PET non-wovens, aligning seamlessly with sustainable automotive practices and contributing to a more eco-conscious and durable path in automotive design.

### Walki®Re-Inforce Mono attributes

- Designed for recycling
- Improved part integrity or tear resistance
- Plug & Play (freedom to design)
- Strong dimensional stability & lightweight

### Typical applications

- Underbody shield skin

### Working with us makes you more competitive. More functionalities, less layers and steps.

---

- Combination of innovative functionalities
- Material combinations with synergies
- Easy handling
- Faster production
- Lower stock levels
- Simpler warehousing
