

Why KENOTOM

- Proven track record as preferred partner of 2 of the largest automotive suppliers
- Cost effectiveness for high quality engineering solutions
- Fast project scaling with highly talented personnel
- Dedication to quality, security and lifecycle processes /standards (ASPICE, ISO 26262, ISO 21434)
- Deep expertise in power electronics applications and AUTOSAR Classic

Fields of activity

-  **Automotive**
Powertrain, interior and ADAS ECUs
-  **Aerospace**
Embedded systems development
-  **Industrial Automation**
Design and deployment of control panels
-  **Medical**
SW development and validation
-  **Electronics**
Embedded controller memory development

Indicative Toolchain:

Memberships:

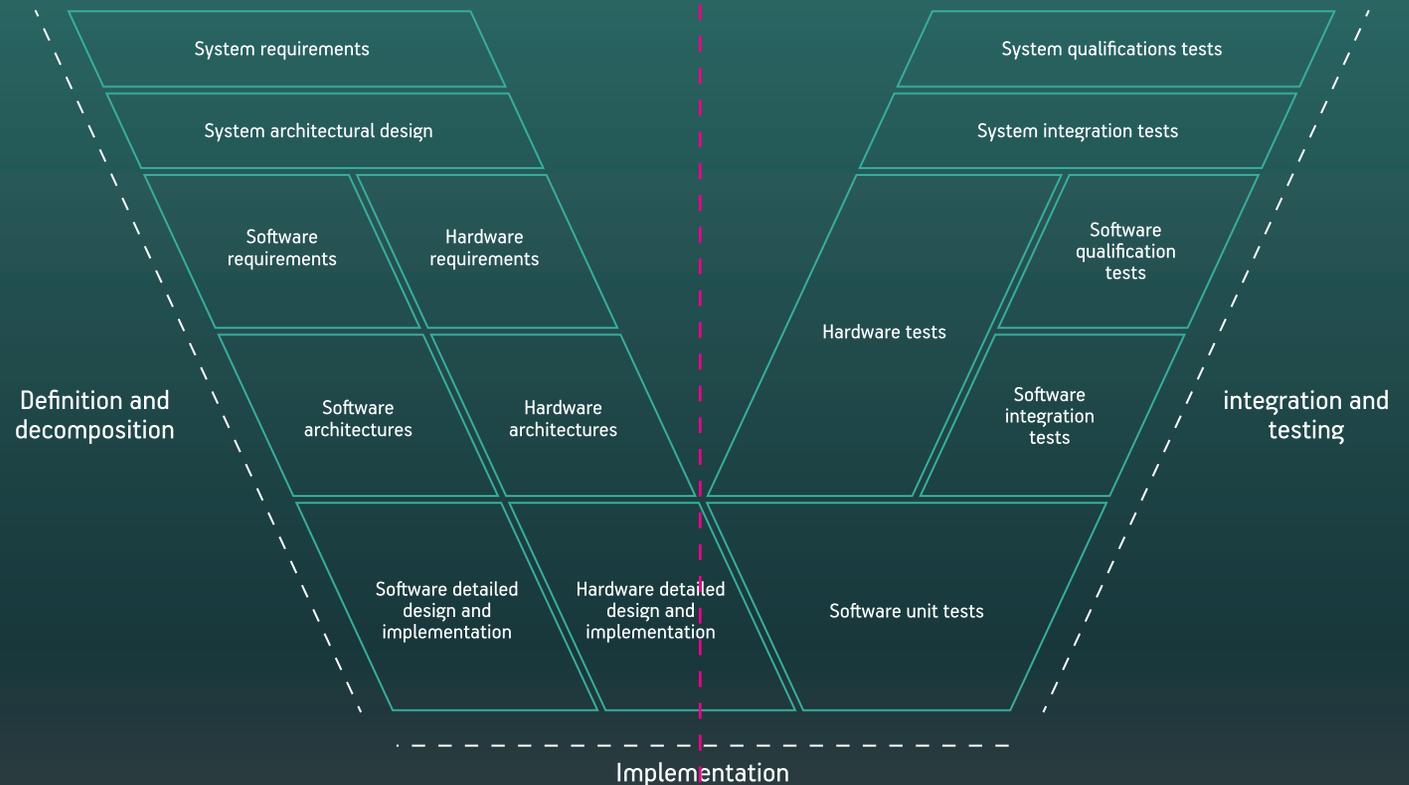

Certifications:

V-Model development

Expertise in all engineering processes for system, software and hardware.

Horizontal offerings

- OS and drivers development
- Embedded application SW development
- Electronics design and validation
- Cyber security solutions
- Unit testing and test automation
- HiL / SiL / MiL / system modeling and commissioning
- Requirements engineering

Vertical application areas

- Motor control and inverters.
- Transmission control
- Battery management
- DC-DC converters
- Advanced driver assistance systems
- Smart HVAC systems
- Medical devices

Who we are

KENOTOM provides engineering services for embedded systems, specializing in mission-critical control units and full lifecycle support. We are committed to quality, security, and operational excellence.

Founded by a team of industry experts, KENOTOM has grown steadily through strong customer relationships and expansion into multiple industries.

Description

Leading embedded systems engineering provider for control applications.

Location

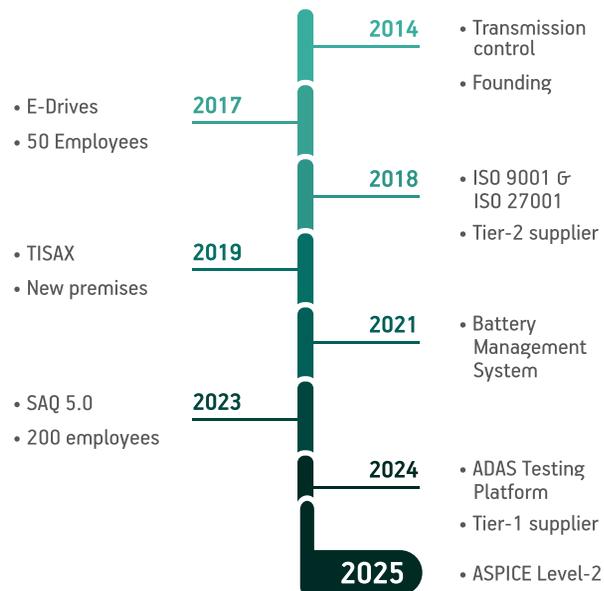

Headquarters in Thessaloniki (GR), international project footprint in our projects.

Clients

Tier-1 Suppliers and OEMs.

Mission

Deliver high-quality, cost-effective solutions to drive innovation in automotive.
