

DIAGNOSTIC

ANALYSIS OF ON-BOARD COMMUNICATION NETWORKS

EDUCATION

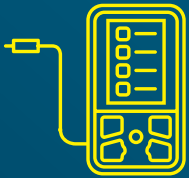

ANNECY ELECTRONIQUE, a company of the **ASCOTRONICS** group, designs, manufactures and markets under its **Exxotest**[®] brand products and services which address the life phases of vehicles and mobile machines: Design – Optimization – Qualification – Diagnostic & Maintenance – Training

WE OFFER RANGES OF PRODUCTS & SERVICES AS WELL AS THE DEVELOPMENT OF CUSTOMIZED SOLUTIONS IN 3 AREAS OF ACTIVITY:

- Diagnostic & Measurement Solutions,
- Analysis Solutions for on-board communication networks,
- Learning Solutions.

DIAGNOSTIC & MEASUREMENT, AFTER-SALES SERVICE TOOLS

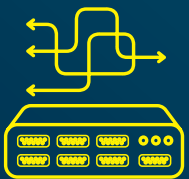

We know the requirements of after-sales networks very well and have developed numerous off-the-shelf and tailor-made tools. Drawing on our experience acquired with automotive, motorcycle, construction equipment and even agricultural machinery repair networks, we develop the solution adapted to your needs based on specifications.

End-of-line flashing solution

Our diagnostic solutions are connected to a back office allowing the manufacturer to administer its tool fleet, to visualize the maintenance operations carried out by its network and to ensure that it has software updates for the ECUs as soon as they are available.

ANALYSIS OF ON-BOARD COMMUNICATION NETWORKS

This is the DNA of the Anancy Électronique company. For more than 20 years, we have been supporting our Manufacturer, Equipment Manufacturer and Integrator customers in the development, validation, production and even integration of their on-board communication systems.

Our tools offer the latest communication standards in the automotive industry (CAN FD, LIN, DoIP, 100BASE-T1).

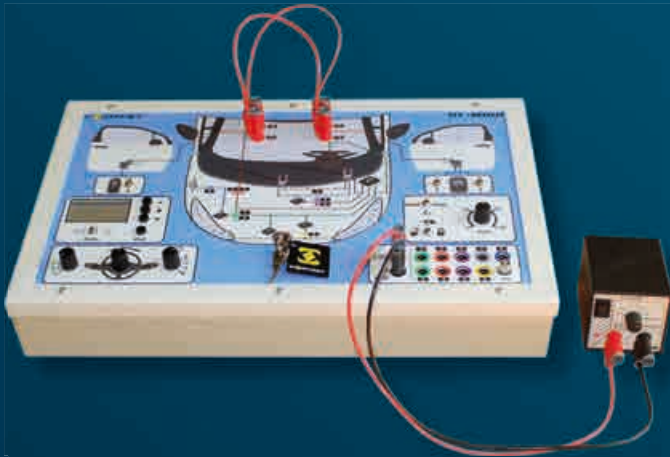

TRAINING AND MAINTENANCE OF VEHICLES AND EQUIPMENT, DIGITAL SYSTEMS

It is thanks to the strong skills of their teams that our clients successfully ensure the continuous deployment of new and innovative technologies. To maintain these skills and integrate new ones, our clients can count on our educational materials and our excellent knowledge of the requirements of their professions.

Our educational models cover all the technologies present in a modern vehicle (communication networks, injection, electric traction chain and charging systems, chassis and vehicle dynamics, etc.).
