Tell me about the APG....

The Arizona Proving Ground is located on I-40, approximately twenty-five (25) miles south of the City of Kingman and forty (40) miles north of Lake Havasu City. It rests between the Hualapai and Black Mountain ranges at an elevation of 1,950 feet, with temperatures averaging 105° (F) in the summer and 39° (F) during the winter months.

The APG boasts 3,840 fenced acres, consisting of a five (5) mile high speed oval, vehicle dynamics facility, wet traction surfaces, sound pass-by facility, water ingestion up to 36", mud packing, grades and a variety of concrete events and gravel roads.

The Proving Ground is just a 40 minute drive to Davis Dam. Within a 50 mile radius of the facility you can experience elevation changes from 7,000 feet to 550 feet.

The facility was built by the military during WWII as an Army Air Corps Base and later sold as Army Surplus to Ford Motor Company in the 1950's. From those rich patriotic roots Ford turned runways into test events, built a 5 mile oval, and transformed the blank desert landscape into an impressive Proving Ground. In 2007 Stellantis purchased the site and continue to build exciting test roads and events.

Due to the unique nature of the facility, customers have the ability to build test events and roadways to fit their unique needs.

Davis Dam Grade

Testing in the Desert offers the benefit of low rainfall, low humidity and over 300 days of sunny skies.
